ENGINEERS FIND NEW SUBSTITUTE FOR ANTHRACITE

Low-Priced Artificial Fuel
Made From Soft Coal Under
Heat and Pressure

WILL HELP SOLVE
SMOKE PROBLEMS

Great Era Ahead in Develop-
ment of Fuels, Natural Sci-
entists Are Told

PITTSBURGH, Pa., Nov. 19 (Special).—A low-priced artificial anthracite manufactured from soft coal under heat and pressure has been found, natural scientists of England and America declared at the closing day of the international conference on bituminous coal in a session at the Carnegie Institute of Technology here.

Various methods and processes of distillation whereby oil, gas and the anthracite fuel that may become available to the public in the near future were described by them.

Harold Nielsen, of the Sensible Heat Distillation, Ltd., London, and C. V. McIntire, of the Consolidated Coal Products Company, New York, told of the extent to which this new fuel had been perfected. At Fairmont, W. Va., where the Consolidated company is experimenting, developments have reached the stage where the owners are now ready to proceed with the erection of a commercial plant. It is Mr. McIntire's belief that the development will help solve the smoke problem.

Use Nature's Methods
"Anthracite in an earlier stage was bituminous coal," he said, "but, under centuries of heat and pressure brought on by geologic changes, the volatile portions were reduced and the density increased. Obviously the best method of converting a smoky bituminous coal into a smokeless artificial anthracite is to employ nature's methods—heat and pressure."

The paper of Mr. Nielsen was more in detail. He treated on the economic aspect of the coal distillation, its cost and the correct scientific method. To obtain the best possible products, he said, other stages after the retorting part of the process were necessary.

Through this distillation and subsequent manufacture his concern has been able to obtain a standard powdered fuel, possessing the qualities of smokelessness, cleanliness, dryness and one that is free burning and easily ignitable. Lubricating oils obtained in the process are, after proper treatment, as good as those obtained from well oils, he asserted. Extracting the third product—gas—does not injure the coal.

"We have found and proved by numerous tests that the combustibility and reactivity of the solid residue is not in any way impaired by the removal of the very largest part of the volatile matters," he said.

Dr. S. W. Parr, applied chemistry professor at Illinois University, reviewed the history of the study of the fuel problem in America which started in 1826, and predicted what the future would bring.

Other Interesting Subjects
"Progress in the fuel research of the future must be based on very different factors from those which were quite sufficient in the preliminary stages," he said, "and for these fundamental studies the future holds out great encouragement by reason of the many new tools which present-day developments in all of the physical sciences have sharpened and put in order ready for our use."

Technical studies of low temperature distillation were given by F. C. (Continued on Page 1, Column 2)

Broadway, Old Yet Ever New, Has Rich Historic Background

Former Cow Lane, Now Canyon Between Skyscrapers,
Observes Its 300th Anniversary—Putnam, Wash-
ington, Hamilton, Irving, Knew It Well

Special from Monitor Bureau
NEW YORK, Nov. 19.—All the nations—as well as New York City—today gave a thought to Broadway, America's Applan Way. In terminating the three-day tercentenary observance of the city a spectacular parade drew thousands to Broadway, the great artery of trade, commerce, travel and romance, the thoroughfare that starts at Bowling Green, goes through Hudson Valley cities and towns and straight out to Albany.

Broadway is more than a thoroughfare—it is a road of achievement, of historical interest. As was its Roman prototype, it is lined with monuments of the past, with statues of the great, and with tablets commemorating gallant deeds. Historically, politically, commercially it is rich in every tradition. In the industrial crafts, in art and architecture, in literature and drama, in education, and in many other ways, Broadway today has a place in the thoughts of men.

Humble Was Its Beginning
Humble was it in its beginning—an open passage as wide as the market place in front of the part which the Dutch built in 1624, when they founded their town at the end of the later bought Manhattan. The story goes that in the path which now is a mighty canyon between skyscrapers, lowering cows of the honest burghers ambled to the pastures beyond the Great Wall. Such was the Heere Wegh, known also as the Breedewegh to the Dutch. When the English made old Peter Stuyvesant surrender fort and town, the roadway, known for a time as "Church Walk," slipped easily into its Anglicized name of Broadway.

Washington Irving, himself a Broadwayite, for he lived as a boy at No. 18, made old Diederich Knickerbocker say that Communipaw was the name from which New York was hatched. How much better it would have been to apply that title to the Broadway of old, in which are the very origins of a great city!

Signs of discontent against British rule appeared in Broadway in 1765, when Liberty poles were reared again, and again in protest against the Stamp Act. Within a few feet of the Broadway curb today is a copy of one of those avatars of freedom. At Bowling Green, where Broadway begins, stood the gilded equestrian statue of George III, but it was hauled by patriots from its pedestal and sent to Connecticut to be melted into bullets and cannon balls. In Broadway marched the Revolutionary Army on that same July 9, 1776, to hear in the Commons the reading of the Declaration of Independence. From Broadway to the river landings retreated the ragged Continentals, and up Broadway swaggered the arriving Redcoats. No. 1 Broadway, abandoned by Washington, became the headquarters of Howe and Carleton, from which went the orders of an army of occupation.

An Historic Background
And up Broadway, then a winding road to the north, where now the new Paramount Theater stands, valiant Israel Putnam stood, further up Broadway, raised the flag of the new nation. From the woods and country lanes, Washington again engaged the British foe. Swinging into Broadway, the patriot forces returned one day, as the enemy retired, and No. 1 Broadway again welcomed "The Father of His Country" to its doors, and in St. Paul's Chapel at Broadway and Vesey Street, he gave thanks for victory.

Here in Broadway, the seeds of American Government were sown. Here Washington rode to his inaugural at Federal Hall in Wall Street as the first President of the United States. At No. 39 Broadway was the first "White House" of the land.

In Broadway, Alexander Hamilton, "Father of the Constitution," had his law office, where, with gifted pen he formulated the fundamentals of United States national finance. When Broadway was no longer the nation's capital, it turned to commerce and industry. It was here which separated the lower city from the new city which was forming was entirely removed, and Wall Street served the merchants and the leaders of industry who were making New York a metropolis.

In Broadway, where that towering "Cathedral of Commerce" the Woolworth Building—now stands, was the house of New York's merchant-mayor, Philip Hone. Along Broadway appeared shops filled with costly wares brought by stout packmen from the looms of Britain and of the East.

Old Yet Ever New
And in this Broadway—old yet ever new—the ever present problem of traffic pressed for solution year by year. At first, the rattling point spangled stage, then the lumbering bob-tailed horse cars; next new wonder of the cable road, and, finally, the electric trolley were tested on the American Applan Way. And deep below the rattling stage and the horse-drawn car, a circular tunnel—through the bow of which, like a wad in the giant's popgun, the cylindrical cars were sped by the force of compressed air.

For years, abandoned to the damps and ooze, the old underground road

How Taxpayer Gets Value for Dollars

Special to The Christian Science Monitor

Hot Springs, Ark., Nov. 19
WISCONSIN has the lowest cost of state government in the United States, \$9.20 per capita, Solomon Levitan, state treasurer, told the National Association of State Auditors, Comptrollers and Treasurers. He said that 43 per cent goes for education and that 15 per cent more than the average is expended on roads.

"True economy is not the withholding of funds," said Baxter Durham, auditor of North Carolina. "There is more real value returned for the tax dollar that is spent than any other dollar you spend. Therefore money you spend for taxes is your most economical expenditure."

Once a Cow Path

BROADWAY AS IT LOOKS ON ITS THREE HUNDRETH ANNIVERSARY

BIMBA SPEECH TO BE ALLOWED

Mayor Nichols Not to Bar
Radical Editors' Meeting
in Faneuil Hall

Anthony Bimba, Lithuanian editor of Brooklyn, is to speak on Sunday night in Faneuil Hall, and Mayor Nichols today announced that he would not interfere with Mr. Bimba's intentions. At the same time, Mayor Nichols announced that he will inform local representatives of the United States Department of Justice of the meeting, which Mr. Bimba will address is to be held under the auspices of the American Civil Liberties Union and the International Labor Defense.

Mr. Bimba was barred from speaking in Boston last February by Charles G. Keene, president of the Boston City Council, who was acting as Mayor, Mayor Nichols being in New York at the time. When protest was made by many citizens of varying importance in the community, Mayor Nichols upon his return to the city sustained Mr. Keene in his attitude. Mr. Keene and Mayor Nichols at that time stated that in view of grave legal matters which were before the court they deemed it unwise for Mr. Bimba to speak.

It will be remembered that the date of the meeting at that time was on the eve of Mr. Bimba's trial in Brockton, Mass., where he was charged with blasphemy under one of the old laws of Massachusetts. At the same time applications for new trial were pending in the Sacco and Vanzetti case and in the Cambridge carmen slaying and robbery case.

"There is no public question of great importance at this time," said Mayor Nichols, "requiring my interference with this proposed meeting. Last February I felt that under all of the circumstances Mr. Keene had done the right thing."

"I felt then that my position in the matter was misunderstood. I am not opposed to free speech within certain reasonable limits, but as Mayor of Boston I reserve my right to draw that line where my judgment and conscience dictate that it should be drawn."

The meeting which Mr. Bimba will address on Sunday was prepared for at a gathering in the historical Old South Meeting House, which is conducted under the control of the Old South Meeting House Association. It

Aliens Answer "Who" Not "Why"

Two Arctic Owls Disembark
at Boston After Four-Day
Trip on Leyland Liner

Two Arctic owls were brought to Boston today by the Leyland line steamship Winifreda. The pair alighted on the forepeak last Monday morning when the liner was about 760 miles east of Boston and 400 miles from the nearest land. The birds have a spread of wings measuring four feet, with snow white plumage with a tinge of gray on their breasts. Their eyes are like bright yellow beads. A pair of owls, similar in size and color, were brought in last Monday by the White Star liner Celtic.

BRITISH GOVERNMENT TO RETAIN OIL SHARES

By Wireless from Monitor Bureau
LONDON, Nov. 19.—The British Government proposes to continue to hold its 5,000,000 shares in the Anglo-Persian Oil Company.

Winston Churchill, Chancellor of the Exchequer, indicated this last night in the House of Commons when he gave a negative answer to an inquiry from the Labor benches as to whether the sale of these shares is contemplated, now that their market price is \$4 5/8, each, compared with \$2 10s. in 1923.

Game of Guesses on Treasury Surplus Holds No Appeal for Secretary Mellon

Special from Monitor Bureau

WASHINGTON, Nov. 19.—It was recommended to the newspaper correspondents by the head of the department that they should report on the subject of tax reduction details. "No information can be obtained at the Treasury," While this was humorously put, the view of the Treasury officials is that there is too much guessing as to what the surplus will be at the end of the fiscal year and what credits can be allowed.

When the estimated surplus, in spite of the figures given by the Treasury indicating its best estimate, begins to be placed at \$350,000,000, then at \$400,000,000 and then at \$500,000,000, it has passed from the realm of actuality into which Mr. Mellon concerns himself. It is simply wasting time, he feels. If it were not offensive, the Secretary of the Treasury would say that these

COURT ENJOINS 13 UNIONS IN BUILDINGSTRIKE

Points to End of Sympathetic Walk-Out Involving
Big Boston Projects

Elias Bishop, judge of the Superior Court, today "strictly restrained and enjoined" the officers and members of 13 unions, engaged in a sympathetic strike against the Scully Company and sub-contractors working on several projects in Boston, from continuing the strike pending further order of the court.

The defendant unions and officers are also enjoined from interfering with or attempting to interfere with the employment by the Scully Company or by sub-contractors engaged with the company, of any members of the defendant unions, or other unions or any workmen in its operation, and from ordering or from trying to cause any such workmen to quit the job or go on strike.

It is contended that the business agent of the unions wanted Mr. Scully to pay the men in the gravel pits and working on wharves a wage that would give them \$96 a week. When he said he could not do it a strike followed with the result that other unions called their men out to help enforce the strike demands. This, Mr. Mayberry contended, was a conspiracy of the unions which amounted to a threat to boycott.

The strike has been under way since August 25, and has tied up about \$500,000 worth of building operations. Arguments were made upon the preliminary report of Joseph Nicholson as master in this case.

The unions enjoined are as follows: Local 4, Hoisting and Portable Engineers; Local 49, International Hod Carriers, Building and Common Laborers' Union of America; Local 71, International Hod Carriers, Building and Common Laborers' Union of America; Local 23 of the same organization; Local 17, Sheet Metal Workers' International Association; Local 33, United States Tile and Composition Roofers, Lamp and Water Proofing Workers' Association; Local 7, International Association of Bridge, Structural and Ornamental Iron Workers; Local 3, Brick Layers and Benevolent Protective Association; Local 103, International Brotherhood of Electrical Workers; Local 12, United Association of Plumbers and Steam Fitters; Local 4, International Union of Elevator Constructors; Local 1044, Painters and Paper Hangers and Decorators of America; Edward Graves, president, and Ernest A. Johnson, secretary and treasurer, and business agent of the United Buildings Trades Council of Boston, and other individual members of unions already mentioned.

Company's View Stated
In his bill, Mr. Mayberry stated that the Scully Company, engaged for the past 10 years in the construction of office buildings, apartment houses and buildings of great magnitude in Boston and elsewhere, had acquired a good will of great value, operated a large plant and invested much money in its business.

He stated that the workmen involved in the sympathetic strike are skilled in their line of work, making their services especially valuable to the Scully Company, with the result that the interruption of their work resulted in much damage to the company and delay and confusion in completing the work. It is important to the business of the Scully Company that it be permitted to transact its business without interference from the defendants. The bill then recited that the construction as carried on by the Scully Company entitled the subletting of portions of the work to subcontractors, and therefore it was equally important to the whole operation that the subcontractors should not be interfered with.

The bill alleged that the 13 unions involved in the strike are affiliated with the Building Trades Council, the constitution of which Mr. Mayberry says requires all unions and members to leave a "struck job" when ordered to do so by the council agents regardless of whether this particular union is engaged in the trades dispute.

figures were "invented." As it is he considers them neither logical nor substantial. He stands upon his statement recently given out and sees no reason for changing it in any particular. The farthest Mr. Mellon has ever gone in estimating the surplus for the fiscal year in June next was to say that it might reach \$300,000,000. Of course much depends upon what Congress does, how much money it appropriates or authorizes. There may be least in the Treasury is now estimated at the end of the year; there may possibly be more. Having made public what could be done in the way of tax relief in view of present conditions and legitimate prospects, the Treasury is simply awaiting consideration and action by the city's legislators while industrial and commercial interests are pressing for action by the Council, which will make possible the establishment of the Chamber of Commerce plan for a Daily Cambridge Exposition of Cambridge manufactures on one entire floor of the new Kendall Square Building.

Presides Over New England Council

JOHN S. LAWRENCE

WOMEN INVITE CANDIDATES TO DISPLAY WARES

Seekers for Vacant Cambridge Council Post
Face a Test

Increasing interest by women in civic affairs is shown in Cambridge where the League of Women Voters has invited 11 aspirants for the seat in the City Council, formerly held by John J. McCarthy, to state their qualifications for such official responsibilities, at a candidates' rally tonight in Brattle Hall.

The primary next Tuesday and the special election on Dec. 14, the league points out, will cost the city \$7000. "Get your money's worth," says the announcement of the city committee of the league, "by voting at both primary and election. . . . Mr. McCarthy was an excellent councillor; it is important to elect his equal."

The open forum for candidates is expected to quicken materially interest in the primary and the election. So far, the average Cambridge citizen is thinking little of the event and this fact is being advanced as a reason why the new Cambridge charter should be amended in some way whereby a vacancy in the Council could be filled by the Council itself rather than through the expense of an election.

The vacancy, due to the passing of Mr. McCarthy, is for one of the four councilor-at-large seats. Eleven of the 15 members are elected, one from each of the wards; Mayor and City Council are elected for two years. The last municipal election in Cambridge was in December, 1925. The polls will be open from noon till 9 p. m.

Candidates for the preferential primary on Nov. 23 are: Arthur F. Blanchard, former councilman and now Representative in the Legislature; Daniel P. Leahy, former councilman, a candidate for the national House of Representatives two years ago when Harry I. Thayer, Republican, of Wakefield was elected from the Eighth Congressional District; James W. King, merchant, who was candidate last year for Mayor when Edward W. Quinn was re-elected; Henry J. Cabral, conductor on the Boston Elevated Railway system; James B. Casey, former Representative in the Legislature; Francis X. Hurley, Harvard Law School student and son of Patrick Hurley, inspector in the Cambridge police department; Francis J. McElhiney, veteran of the World War, and in the real estate business in Central Square; Leslie F. Morrison, candidate for the Council from Ward 4 last year when he was defeated; George H. Christensen, of 111 Montgomery Street, in business; Joseph F. McKenna, of 13 Magazine Street and Timothy E. Murphy, of 1 Cedar Square.

Among the problems which await solution by the Council are those to widen Douglas, Elm and Brookline Streets and thus provide for a wide and modern boulevard to care for the increased traffic which is expected to result from the new College Farm bridge, and the widening of Broadway to relieve the traffic in Central Square and to care for the increasing use of the West Boston bridge.

The building of a new and modern city home is also an improvement awaiting consideration and action by the city's legislators while industrial and commercial interests are pressing for action by the Council, which will make possible the establishment of the Chamber of Commerce plan for a Daily Cambridge Exposition of Cambridge manufactures on one entire floor of the new Kendall Square Building.

Woman Wins Honors for Aid to Legion

Miss E. M. Foss of Concord
Made 110 Speeches for
Preference Act

A complimentary luncheon will be given to Miss Eugenie M. Foss, of Concord, Mass., chairman of the legislative committee of the American Legion Auxiliary for her efforts in the recent campaign to prevent any change in veterans' preference.

The luncheon will be given Saturday, Nov. 27, in the Bellevue. A loving cup will be presented Miss Foss by the Auxiliary, and the executive committee of the Legion will give her a framed engraved resolution of thanks. Miss Foss delivered 110 speeches during the Legion campaign.

CANTONESE STILL PUSHING NORTHWARD

Attention Centers on Course
of Marshal Sun

SHANGHAI, Nov. 19 (F).—While the Soviet-guided Cantonese Government is pushing ever northward and establishing its capital at Wuchang in central China with the idea of attempting to unify the Nation, attention today centered on the future course of Marshal Sun Chuan-fang, eastern leader and enemy of the southern faction, whose five-province federation has shrunk to three states since he took up arms against Canton.

Whether Sun Chuan-fang will content himself with defending his remaining provinces, Kiangsu, Chekiang and Anhui, operating from his stronghold in the latter state, or whether he will appear to General Changshung-chang, leader of the Manchurian expeditionary forces in China, for assistance against the Cantonese, is uncertain.

If he asks the help of the Manchurians it is a virtual certainty that assistance will cost him all hope of retaining dominion over Kiangsu Province. A rumor here today was that Marshal Sun and General Chang K'ai-shek, Commander of the Cantonese Army, had made an agreement by which Marshal Sun was to retain Kiangsu and Anhui and the latter was to take Chekiang State.

It is generally felt that Marshal Sun cannot hold back the southerners because of disloyalty and the disintegration of his army.

Dr. Klein Speaks
Lack of intelligent buying and selling was stressed by Dr. Julius Klein, chief of the United States Bureau of Foreign and Domestic Commerce. He said that the principal cause of failure is "not found among the commonly accepted alibis for failure—excessive wages, discriminatory freight rates, inaccessible raw materials, remoteness of markets, etc. One of the outstanding needs for the maintenance of stable conditions in industry and commerce at present, therefore, is the spread of applied research in marketing."

(Continued on Page 5B, Column 2)

NEW ENGLAND PROPOSES YEAR OF ACHIEVEMENT

Plans for "Selling" Are
Discussed by Leaders at
the Conference

PERMANENT RESEARCH
DEPARTMENT ADVISED

Joint Jurisdiction Over Inter-
state Power Advocated for
the Six States

HARTFORD, Conn., Nov. 19 (Special).—Successful development of a home market by energetic merchandising of New England products was the central theme of the closing session today of the second annual New England conference, which opened here yesterday with an assemblage of 1200 men and women engaged in the promotion of New England's industrial and commercial activities.

The keynote of the reports and addresses was "selling New England" with the idea that if New England can successfully develop a home market for its goods, the market of the rest of the country will be comparatively easy consequence.

This theme carries on the suggestions made by Governor Trumbull of Connecticut and Governor Brewster of Maine at the complimentary dinner in Hotel Bond last night, which every delegate was the guest of the Connecticut Governor.

After a discussion in which E. G. Buckmaster, vice-president of the New Haven Railroad, said he thought the \$100,000 budget recommended for next year's work should be cut down to \$75,000, the Connecticut council endorsed the full amount. It was expected that the rest of the state councils would take similar action by re-electing their present delegates and endorsing the activities of the New England council.

The chief topic at this morning's session was the discussion of the reports of research studies under the auspices of the New England council and of the communities made by the United States Department of Commerce in its economic survey of New England.

Following the meetings of the state delegations at 8:30, Dr. J. G. Lipman, dean and director of the New Jersey agricultural experiment station, talked on "Agricultural Trends and Policies in the Industrial East." He said there was too much land used in farming and advised that only the best ground be utilized and that the communities on the fringe of the city should be developed.

Research Department
A plan to make New England a merchandising laboratory wherein New England retailers may assist New England manufacturers in working out their merchandising problems, was presented by A. Lincoln Allen, chairman of the research committee.

In suggesting a department of research under the New England council, the committee's report said functions of such a department should include:

To make known to interested firms or organizations what research facilities are available in New England.

To acquaint New England industries and research agencies with research projects under way in New England.

To stimulate larger use of research by New England industries, organizations and research agencies with research projects under way in New England.

Gather and disseminate information of particular interest to New England industries and communities. Render such advice and assistance as it is able to give to firms, organizations, and communities contemplating use of research. In illustration of the field for research in relation to New England business the committee suggested the following studies, which, it believes, would yield results of value to New England: Finding out what new products can be made in New England factories; what new uses can be found for existing New England products; how to extend time of operation of seasonal New England industries; improvement and elimination of antiquated equipment; possible advantages to New England industries of mergers and combinations; diversification of industry in New England communities; methods of attracting new industries, and the reasons why certain industries have left New England.

RADIO'S DOMAIN SWARMING WITH NEW STATIONS

End Not Yet in Sight Unless
Congress Finds Way to
Halt the Invasion

Special from Monitor Bureau

NEW YORK, Nov. 19.—Radio congestion in the New York district grows steadily worse as new stations continue to be added to the crowded field.

The 36 stations in this district which marked the "thus far and no farther" of the Commerce Department in July, when the Department of Justice nullified its assumed regulatory power, have since been increased in number by more than half.

Today 55 stations crowd the wavelength band and 11 more are prospective applicants at the district supervisor's office. It is expected that they will come in at any time.

Situation May Grow Worse
No hope for any improvement is held out by Arthur Batcheller, radio supervisor. While prospective applicants are discouraged by the department from opening new stations on account of the mechanical obstacles to transmission, it is quite probable that still more stations may be established and licensed, Mr. Batcheller said.

He added that under the law, as interpreted by the Department of Justice, his office is powerless to do other than accept applications, if

prospective radio-casters are determined to establish stations with wavelength designations of their own choice.

"From present indications the situation will grow worse before an improvement can come," Mr. Batcheller declared. "I understand preliminary conferences are now in progress among members of Congress in Washington, looking to early legislative action after the new session opens next month."

"Even after a new law may be passed to clarify the situation, numerous complications, both legal and engineering, will continue to confront the radio industry. Time alone will gradually bring about satisfactory conditions."

Chicago Ruling Important
A new development on the legal side is the decision just rendered by Judge Francis L. Wilson of Chicago, in the equity suit brought in the Illinois State Circuit Court by the Tribune Company, operating WGN and WLJL, against the WGES station.

This decision enjoins the WGES from using a wavelength sufficiently near to the Tribune stations to interfere with its programs.

This decision held, for the first time by a court of equity in the United States, that priority of time in the use of a particular wavelength, the investment in property on this basis and the education of the radio receiving public to it, establishes a superiority of right in the particular part of the ether affected. The court ruled that jurisdiction must rest with state courts until further action may be taken by Congress, which action was forecast in the court's ruling.

15,000 Vessels Send Messages
The mechanical difficulties which will remain after definite statutory regulations may be worked out arise from the physics of radio transmission and the manifold types of apparatus used for the various kinds of service in which radio-casting is employed.

Besides the numerous land stations with their varieties of programs, there are already some 15,000 vessels at sea, sending and receiving commercial messages, entertainment programs and weather and location reports.

Beyond the three-mile limit to the country's territorial waters, radio stations on vessels are out of United States registry are out of

The Dobbs Mayfair, \$20
EVERY Dobbs seems to have a personality of its own—a way of adapting itself to the mood of the wearer. They actually fit the head, drape and crease themselves in the most fashion approved ways. The brim of the Mayfair turns up just as becomingly as it turns down. Made of (to quote Dobbs) "leisure-light felt." Choose it in your head size and the color you wish. It is \$20.

Are you going to the game? Do you want to show your colors right on your head where they can be seen? Why not choose a Dobbs in red or blue? You'll have no difficulty in finding one to fit you, for they come in head-sizes just as men's hats do.

Other Dobbs hats are priced \$12.50 to \$20. Filene's-Dobbs hat shop—Second Floor. Filene's is the exclusive representative of Dobbs hats in Boston.

RAY OF HOPE SEEN BY RADIO COMMITTEE

WASHINGTON, Nov. 19.—The longer radio legislation is delayed, the more confused will the situation become as new stations are constructed and changes made in assigned wavelengths, warned Herbert Hoover, Secretary of Commerce, who has just returned from a five weeks' trip through the West.

There is no doubt that "chaos" has already arrived, as was forecast when radio control by the Department of Commerce was broken down by the Chicago court decision in the Zenith case, Mr. Hoover believes. Particularly in the Middle West, radio audiences are troubled by "interference" caused by shifts in wavelengths, construction of new stations and general competition, in the rearrangement of broadcasting programs.

Including new stations and changes in wavelengths there have been about 150 important changes in the radio situation since control of the Department of Commerce broke down, Mr. Hoover stated. The first step in bringing order out of this situation, when Congress finally acts upon pending radio legislation, will be the necessary "weeding out" of surplus radio-casting stations.

Among the 615 stations now operating about 115 should be discontinued to insure orderly broadcasting and the maximum of service to the public, he explained. Whether the Secretary of Commerce or an independent commission is finally set up as the source of radio control, a determination of what stations are operating "in the public interest" must be made.

Mr. Hoover believes that the recent decision of the Chicago court in the case of WGN vs. WGES granting an injunction to prevent interference, will lead to immediate court action in a number of interference cases. The National Radio Co-ordinating Committee, which has established headquarters in Washington and is said to represent radio broadcasters and manufacturers, sees in this decision "a ray of hope."

"Confirmation of the Chicago decision in other state courts will do much to check the invasions of ether channels which are being planned by more than 70 stations now under construction," it was stated by the committee.

Federal Control
The Department of Commerce has no authority to prevent construction of new broadcasting stations, and in

"RAY OF HOPE" SEEN
BY RADIO COMMITTEE

Special from Monitor Bureau

WASHINGTON, Nov. 19.—The longer radio legislation is delayed, the more confused will the situation become as new stations are constructed and changes made in assigned wavelengths, warned Herbert Hoover, Secretary of Commerce, who has just returned from a five weeks' trip through the West.

There is no doubt that "chaos" has already arrived, as was forecast when radio control by the Department of Commerce was broken down by the Chicago court decision in the Zenith case, Mr. Hoover believes.

"No laws can ever avoid all the trouble, any more than laws can rule congestion of the streets and sidewalks. A law is needed to fix a regulating authority and basic mechanical principles must be determined by competent engineers. After that, free competition, legal contests and public opinion must gradually bring about the best attainable conditions in the industry."

Two measures already drafted are expected to be taken up by the next Congress. They are the White bill, which would leave control of the radio industry with the Secretary of Commerce, aided by an advisory committee to be called at his instance, and the Dill bill, which contemplates establishment of a governing commission of five members with salaries of \$10,000 each.

MOTORSHIP BEATS AUSTRALIAN RECORD
Orestes, With Wool Cargo, Clips Off Two Days

By Wireless from Monitor Bureau
LONDON, Nov. 19.—A race reminiscent of the days of the famous old sailing clippers Cutty Sark, Thermopylae, Lightning and Flying Cloud, has just been concluded with the arrival in London of the motor-ship Orestes with the first of the season's wool clip from Australia. The early wool clip commands high prices and the Orestes made such good passage that her wool will be in the factories before the other ships reach England.

The good ship Cutty Sark once beat a steamship in a race home from Melbourne with the wool clip, but the record passage from Australia to England under canvas, 62 days stands to the credit of the Thermopylae in 1869. Nowadays the clipper generally takes 26 days under steam, but the motor-ship Orestes has beaten this by two days. She intends to return to Australia immediately to obtain a second cargo of wool before the year and the annual wool season come to a simultaneous end.

POST FOR DR. HADLEY
At a meeting in Boston of the directors of Engineers Public Service Company, Dr. Arthur T. Hadley, president emeritus of Yale University, Beckwith Winthrop of Robert Winthrop & Co., and Andrew Sletzer Jr. of W. & A. Sletzer & Co. were elected to the board, thus filling the vacancy left by C. Chauncey Stillman and increasing the board membership from 13 to 15.

fringement of wavelengths used by existing stations is expected still further to complicate the present situation, according to officials.

"Explaining its stand on radio legislation, the National Radio Co-ordinating Committee said:

"Radio legislation which will establish federal control over broadcasting is highly essential. If it is impossible to secure the enactment of permanent legislation in the immediate future Congress should pass an emergency measure which will prevent further confusion in the ether."

Standpoint of Service
"In the enactment of legislation it is the recommendation of the committee that whatever authority is placed over broadcasting should be required to make determination of who shall broadcast by giving consideration to the length of time stations have operated; the character of service rendered by them, and the requirements of their states and communities for radio service. This is not intended in any way to establish a vested right as against the United States but asserts that there is a distinction between vested rights and the rights of individuals against each other."

"The co-ordinating committee of the radio industry is not taking the part of proponents of either bill, but is insistent that the bills be regarded from the standpoint of public service."

playhouses of old, about the City Hall have gone, but scores on scores of theaters which make up that empyrean where gleam stars of stage and screen—which men called Broadway. Here in Broadway stands the Metropolitan Opera House, citadel of musical genius and social grace. Below Union Square at set of sun, Broadway retires to rest, while above, in the "Shining Forties," it arises amid millions of electric fires and in the hues of Iris, which bedeck signs and beacons aglow with the imprisoned sunbeams made to serve the night.

Such is the street of light with its hotels and its restaurants, with its gaiety. In providing the so-called luxuries of life, Broadway has always been Broadway—since Charles Dickens marveled at the sumptuous fare of the City Hotel; since Delmonico began at old Stevens House.

But this Broadway, prosperous and materialistic even if you will, has also its deeper and its cultural side. Along it one sees the statues of Washington and Lincoln and Lafayette, who in their day passed over its storied stones. In its upper reaches are great universities, schools, fane of learning; museums filled with the lore of early America.

Here in Broadway are great churches and mighty buildings housing many activities, for here is a street—which is all things to all men—Broadway!

B. U. CHINESE CLUB ELECTS OFFICERS

Officers of the Chinese Club of Boston University have been chosen for the current year. Jennie Hau of Tientsin, a student in the graduates school, is president; Jawahat Wank of Foochow, school of education student, vice-president; Whittier Ching of Canton, College of Business Administration, is secretary; Peter Kiang, of Nanking, school of theology matriculant, treasurer.

At the school of religious education and social service, the junior class has elected to its junior play committee Helen Park of Brooklyn, N. Y.; Charles Davis of Scranton, Pa.; Ruth Doggett of Newtonville, Byron Flory of Clarksburg, W. Va., and Christine Burdick of Jewett City, Conn.

BRITISH COAL STRIKE LOSS ABOUT £400,000,000

Such Is Estimate of Government Experts—Nearly All Industries Affected

By Wireless from Monitor Bureau
LONDON, Nov. 19.—The end of the British coal stoppage is rapidly approaching and all who are concerned in the country's future welfare are reflecting on the calamitous effects of the industrial conflict. Estimates of the loss caused by the strike are necessarily approximate, but there is little reason to doubt that the total figure cannot be far short of the £400,000,000 suggested by Government experts.

Nearly all manufacturing industries have been affected. The majority of the iron works have been completely shut down. The steel works are operating on short time. Shipbuilding and many other industries are partly held up for lack of material. More than 1,000,000 mine workers were idle for the first four months of the stoppage, and nearly 800,000 for the whole period of 23 weeks. In addition, about 25,000 workers in other trades have been completely unemployed through the whole period and a still larger number are on short time as a direct consequence of the colliery holdup.

Mining Losses Heavy
The mining community has lost £260,000,000 in wages. Few families have escaped the necessity of piling up debts and tradespeople in all mining towns and villages are also heavily involved. The savings of a lifetime have disappeared. Boards of Guardians in mining areas have spent in poor law relief over £2,000,000 more than during the same period last year. Five million pounds have been borrowed, and to repay the capital and interest a large increase in local taxation will be necessary.

Already in the chief industrial centers the burden was handicapping those industries in which large works were heavily assessed for local rates, especially iron, steel and shipbuilding, but this burden is now to be much heavier and will help to retard recovery. Two million of the population are now living on poor law relief, and in one mining area half of the inhabitants are paupers.

All this indicates how serious the loss of production and revenues must have been in trades and occupations connected with the manufacture and distribution of necessities.

Union Membership Drops
Communists and Labor extremists who are akin to them rejoice at the damage inflicted on capitalist organizations. Their agitators are directed to this end, as they hold that the rule of the capitalist state and a general collapse must come before a new state can be built. They appear to be indifferent to the immense human suffering involved in this process, even if they could succeed in destroying the existing order and reconstruct on its ruins.

Saner Labor leaders and workers are, however, contemplating ruefully the disastrous effect of the conflict on the whole trade union movement. There has been a heavy loss in membership, and the reserve funds accumulated laboriously by thrift and sacrifice on the part of millions of workers have been depleted in half a year.

Will Take Years to Recover
Unions of rail clerks and locomotive men, of iron and steel workers, engineers of all classes, transport workers and big unions of unskilled or semi-skilled workers are more or less in a similar plight. Published figures of the expenditure and debts of these unions are unavailable, but the aggregate losses must amount to several millions. This is especially serious for unions of general workers and laborers whose contributions are rarely more than 6d. per week, and it will take years to recover the pre-stoppage financial position. All the miners' unions were insolvent within two or three weeks of the beginning of the stoppage.

The full effect of the conflict on the country's general export and import trade will not be felt for several months. In coal exports alone the loss of revenue amounts to about £30,000,000, and it is doubtful if all the loss of foreign trade of all kinds will be less than £100,000,000. The prospect for the national Treasury is, therefore, very gloomy, and Winston Churchill's anxiety as Chancellor of the Exchequer is not

GENEVA AGENDA NOW DRAWN UP

Economic Conference to Assemble in May, 1927—Many Important Problems

By Wireless
GENEVA, Nov. 19.—The Economic Conference should meet on May 4, 1927, in the opinion of the preparatory committee of the International Economic Conference whose draft agenda of the conference is now issued. This agenda has been framed with the object of concentrating attention on questions, the discussion of which, it is hoped, will produce practical results. A general debate on world economic problems will also be encouraged, since there is no idea of tying the governments concerned down to a cut and dried program.

Financial questions are not in a water-tight compartment, as urged by the financial experts but are to be considered in general relation to economic problems. Nor is the question of emigration as an outlet for the surplus population of Europe to receive special prominence as desired by certain nations. According to a report, the most important questions to be discussed are improvement of the European and its effect on industry, the instability of exchanges, purchasing power inadequacy, the high cost of capital resulting from insufficient savings, the difficulties caused by increased industrial equipment, the insufficiency and irregularity of the distribution and lighting was to have been used if peace had been secured.

Cabinet's Attitude Stiffens
Meanwhile the Government has stiffened its attitude in consequence of the coal miners' rejection of its peace proposals. The Cabinet, a representative of The Christian Science Monitor learns, had prepared two alternative forms of proclamation for issue tomorrow to renew the emergency regulations. One which would have continued such special powers as are necessary to enable the Government to control coal distribution and lighting was to have been used if peace had been secured. The other which is now to be employed refers not only to those powers, but also to far more extensive ones which give the Government practically unlimited authority for maintaining public order.

Sir William Joynton-Hicks, the Home Secretary, referring in the House of Commons last night to these powers and the use which has been made of them to forbid Communist meetings in the coal fields said that if a settlement were reached he hoped not only this particular but all other reactions would be quickly removed.

"Atmosphere of Peace"
Another and happier reaction of the miners' vote is to be seen in the movement with which the names of such moderate leaders as James H. Thomas, Ramsay MacDonald, J. R. Clynes, Philip Snowden, Arthur Pugh and Miss Margaret Bondfield are associated for creating an atmosphere of peace in the industry generally and providing improved machinery for conciliation.

Referring to this movement, Mr. Clynes says: "Some of us have felt for a long time that industrial peace is desirable not only for the material benefit that it would bring the worker, but also because it would clear the air favorably for political progress by the Labor Party." The nature of the movement is also shown by the congratulations which Mr. MacDonald has sent to George A. Spencer, the miners' leader at Nottingham, who has arranged friendly negotiations with the mine owners in that district, where a local settlement is pending. William A. Appleton, secretary of the General Federation of Trade Unions, refers to the new movement in a report published today, where he says: "At no period in its history has the trade union movement had so great a chance for taking stock as at present."

HIGH ALTITUDE BLIMPS MADE TO GUARD CITIES

AKRON, O. (P)—High altitude balloons, designed for the defense of cities from airplane attacks, are being manufactured here for the United States Army Air Corps. Three of the balloons, each with a 6000 cubic foot capacity, the first of their kind to be built in the United States, have been shipped to Fort Monroe, Va., for experimental purposes.

The new type gas bags, called barrage balloons, capable of reaching a height of three miles, are to be attached to the ground by steel cables. Under the defense scheme the balloons would be sent aloft in such numbers as to form a circle around and above the beleaguered city and make it hazardous for enemy aircraft to approach the city.

Seedless Oranges—If you give good, you get good. Anyway, the first Presbyterian missionary to Brazil, and it will take years to recover the pre-stoppage financial position. All the miners' unions were insolvent within two or three weeks of the beginning of the stoppage.

The full effect of the conflict on the country's general export and import trade will not be felt for several months. In coal exports alone the loss of revenue amounts to about £30,000,000, and it is doubtful if all the loss of foreign trade of all kinds will be less than £100,000,000. The nature of the movement is also shown by the congratulations which Mr. MacDonald has sent to George A. Spencer, the miners' leader at Nottingham, who has arranged friendly negotiations with the mine owners in that district, where a local settlement is pending. William A. Appleton, secretary of the General Federation of Trade Unions, refers to the new movement in a report published today, where he says: "At no period in its history has the trade union movement had so great a chance for taking stock as at present."

HIGH ALTITUDE BLIMPS MADE TO GUARD CITIES

AKRON, O. (P)—High altitude balloons, designed for the defense of cities from airplane attacks, are being manufactured here for the United States Army Air Corps. Three of the balloons, each with a 6000 cubic foot capacity, the first of their kind to be built in the United States, have been shipped to Fort Monroe, Va., for experimental purposes.

The new type gas bags, called barrage balloons, capable of reaching a height of three miles, are to be attached to the ground by steel cables. Under the defense scheme the balloons would be sent aloft in such numbers as to form a circle around and above the beleaguered city and make it hazardous for enemy aircraft to approach the city.

Seedless Oranges—If you give good, you get good. Anyway, the first Presbyterian missionary to Brazil, and it will take years to recover the pre-stoppage financial position. All the miners' unions were insolvent within two or three weeks of the beginning of the stoppage.

The full effect of the conflict on the country's general export and import trade will not be felt for several months. In coal exports alone the loss of revenue amounts to about £30,000,000, and it is doubtful if all the loss of foreign trade of all kinds will be less than £100,000,000. The prospect for the national Treasury is, therefore, very gloomy, and Winston Churchill's anxiety as Chancellor of the Exchequer is not

ing in this connection that more has not been said about free access to and the marketing of raw materials, than the mere allusion to prices and the free movement of products.

But the American experts are expected to raise this question at the international conference, while the Germans, not possessing colonies to supply them with raw materials, are deeply interested in obtaining tropical produce on the same terms as the other countries with colonial territory. The committee also suggests that the Council of the League of Nations invite the governments to prepare printed statements for circulation through the Secretariat of the League before the conference, to show, and render more valuable the discussions on the general questions raised.

CHILEAN CABINET AGREES TO RESIGN

Senor Ibanez Says Communism Must Be Combated

SANTIAGO, Chile (P)—The military have won their point, the Cabinet, acting on the "suggestion" of Minister of War Ibanez, having agreed to resign.

It was not a complete victory for the Minister of War, however, because the other ministers refused to give up their portfolios unless he did likewise. This he finally decided to do, although with the support of the army it is considered likely that he will hold the balance of power, either directly or indirectly, in a new Cabinet.

All the ministers except Senor Ibanez signed a joint resignation and presented it to President Figueroa Larrain. Senor Ibanez signed a separate one.

It is reported that Anibal Letelier, former Minister of Instruction, will endeavor to form a new Cabinet. Senor Ibanez recommended the formation of a new Cabinet to check Communist propaganda in Chile. He said the troops were dissatisfied with existing conditions and that propaganda had been distributed among them.

SAFETY COUNCIL PLANS FOR \$200,000 IN BUDGET

Special from Monitor Bureau
CHICAGO, Nov. 19.—The National Safety Council here has announced it proposes to increase its annual budget to \$200,000. Community surveys, such as are now being made in a few cities, are to be made in hundreds of cities. These surveys cover such details as street markings, methods of protecting school children, fire hazards, traffic signals, and other features of traffic control.

FOREST BUREAU GIVEN APPROVAL

Question to Be Discussed at British Empire Conference in Australia

By Wireless from Monitor Bureau
LONDON, Nov. 19.—The Imperial Conference has approved in theory the proposal to constitute a British Empire forestry bureau and has referred the question of working out the details to the Empire Forestry Conference which is to meet in Australia in 1928. Invitation to a similar conference in South Africa in 1932 has been accepted by the Dominion premiers. In the meanwhile it is hoped to co-ordinate the state forestry development and afforestation with the schemes for empire settlement.

The object of the new bureau is the conservation of timber resources in the British Empire, including overseas dominions. Its effect upon the wood-pulp interests in Canada and elsewhere will be watched with interest by American newspaper publishers, who are the largest consumers of that commodity.

The Imperial Conference, with the exception of Canada, has also notified the acceptance "in principle" of the thesis laid down by the Imperial Economic Conference in 1922 that the governments of any part of the Empire engaging in trade operations outside their own territory shall be liable to taxation on the same scale as a private individual or firm. In most parts of the Empire, it is stated, legislation either has been or will shortly be enacted to give effect to this attitude, and foreign governments will be approached with a view to the acceptance of the principle.

As regards taxation levied on the profits of nonresident traders, there was general, though not complete, agreement that only the "merchandising" profits arising from the activities in the country of sale (i. e., abroad) should be liable to taxation.

Homemaking, Then Politics

Seattle Woman Mayor Urges Rearing of Family Develops Admirable Qualities for Public Service, as Official or Citizen, Mrs. Landes Tells Illinois Voters' League

Special from Monitor Bureau
CHICAGO, Nov. 19.—The mature woman who has reared her family should not spend her leisure in idleness, but she should make an effort to serve her government in some public office or other way, declared Mrs. Bertha Landes, Mayor of Seattle, Wash., who addressed the sixth annual convention of the Illinois League of Women Voters here. Seattle is said to be the largest city in the world with a woman mayor.

Mrs. Landes, however, emphasized that she knows of no "job" which compares in importance with that of the home-maker, and she said she would not trade her record as a home-maker for a career as "mayor of 50 cities." She said that she believes that in their home duties women are fitted to become public officials, and that a mother who has been alert for the "innumerable" unexpected things that confront her in rearing children has by that experience had an admirable training and developed a poise for public life.

Training in Home
A mother is better qualified and more richly endowed with strong, wise judgment for public office than is a woman who has not been a home-maker, she said. But the greatest asset that can help a woman in public life is good sound common sense and a sense of humor, which will carry her through, according to this woman who recently was elected chief executive of a city of 400,000 having 234 precincts spread over 96 square miles.

The woman in public life must early learn to endure insults and smile the while, she must stand for education for better citizenship, she must have a comprehensive knowledge of the affairs under her direction, and she must stand for law enforcement, continued Mrs. Landes. If the woman official does not follow this policy she will not last long as an official, Mrs. Landes declared.

In Seattle the prohibition law has shown increased signs of enforcement since Mrs. Landes became mayor; the city is considerably cleaner; business is going along about the same as it is prospering in other large cities of this Nation, and there has been no attempt to create unpleasant situations for the mayor, nor to annoy or distress her, she reported.

Education for Citizenship
Education for better citizenship is greatly needed, Mrs. Landes pointed out, and this should begin in the cradle, she advised. Education for citizenship in the home is the same training that should be given to any children to establish a harmonious home. Children should realize that the honor of the home depends on their own individual effort, and that in the same way national honor depends upon individual acts of the citizen.

A child should be taught that the honor of the school depends upon his conduct and there should be intensive citizenship training in all the schools of the land. There should be self-government in schools, so that the children will early learn how the adult citizenry is governed, she suggested.

Famous Diamond "Golden Dawn" to Be Sold in London
By Wireless from Monitor Bureau
LONDON, Nov. 19.—Jewelry, gem experts, and connoisseurs are looking forward with interest to the auction sale at Christie's on Dec. 1, of a remarkable diamond known to the trade as the "Golden Dawn." The stone weighs 535 carats and reflects a rainbow glow. The late Professor Dr. Carl Smith, the gem expert, has estimated that the stone he had seen.

It was found by Capt. C. R. Lucas in South Africa in 1912, and originally weighed 115 carats. After cutting it was reduced to its present weight. The stone is said to be one of the world's largest and a price of \$250,000 to \$300,000 was expected. The war coming on made the sale difficult and since the diamond was a continuing source of interest, it was decided to sell it at a later date. It was the original owner, who served throughout the war in the British forces in South Africa and western

NEED FOR HIGHER SALARIES AT YALE SAID TO BE ACUTE

Dr. Angell Says Failure of Proposed \$20,000,000 Endowment Will Mean Yale Will Have to Drop From Front Rank Among Universities

NEW HAVEN, Conn., Nov. 19 (Special)—Yale University announced last night that its proposed \$20,000,000 endowment will have only one duty: to provide the income which will at last permit Yale to raise professors' salaries to more adequate level, and in other ways to better the inner facilities of the university, intangible perhaps but more vital to the real life of the institution than any building, however imposing and fine.

There is acute need for the reconstruction of salaries according to Dr. James R. Angell, so acute that to fail in the drive which alone will make better salaries possible would mean that Yale would have to drop out of the front rank among universities.

In a campaign statement sent to the 30,000 alumni of the university, the situation at Yale is described as serious. "Some teachers have already been lost, coaxed elsewhere by the very important consideration of a salary more in keeping with their needs and their recognized worth," the statement says. "In obtaining new teachers to replace these men, the keen competition of the fast developing, eager universities of the South and West has presented a difficult problem."

This keen competition is expected to grow sharper, for many important universities are now raising funds for improvement of one kind or another. Dr. Angell declares in the pamphlet, "Harvard has recently raised \$25,000,000," he says, "and is reported about to seek several millions more. Princeton is in process of raising \$20,000,000. Johns Hopkins is asking for \$50,000,000, and Pennsylvania for \$45,000,000, while many other universities which could be named have in the last few years successfully sought millions more."

For Yale to keep in the van of universities, Yale too must succeed in raising money, especially since the need springs from the teaching staff. It Yale were not to be able to give more money to her professors, it would, according to Dr. Angell, "inevitably and justly sink to a secondary position, with honor and respect for its ancient accomplishments, but no longer to be reckoned among the unchallenged leaders."

Although conditions vary somewhat in each of these departments the general situation in regard to salaries is illustrated in the statement by the typical department of economists, sociology, and government.

The average salary for full time professors in that department now is \$6500; the average for assistant professors is \$3166, and the average for instructors is \$2100.

After the endowment drive is done and the \$20,000,000 raised, the plan of this department call for increasing salaries until the average of full professors is \$7070, for assistant professors \$3313, and for instructors \$2270.

Instead of the customary German leader, Miss Gray chose a single song, Liszt's "The Lorelei." Whether this substitution was altogether satisfactory is an open question, for several times the music seemed to be laboring under an uneasy burden. To set the tone of the evening, a special orchestra of the orchestra, to have the new version original and attractive is a problem.

Other points which I urge our Massachusetts operators to remember are these: Courteously observe the special traffic regulations made for the day by the Connecticut authorities. Watch your signs and signals. Above all, don't try to pass others on a curve or when approaching the top of a hill. Drive not too fast, not too slow. A reasonable, steady speed is the best assurance of early arrival at the game and safe arrival home.

In view of the large number of requests for road conditions and best routes between Boston and New Haven for the Harvard-Yale game, the touring bureau of the National Automobile Association has issued the following bulletin:

There are three routes which are generally used between Boston and New Haven, one by way of Worcester, Springfield and Hartford to New Haven. The pole markings on this route are No. 20 to Springfield and No. 5 from Springfield to New Haven. Those who wish to avoid the traffic congestion in Springfield can turn left four miles of North Wilbraham over route No. 5A and strike No. 5 route just north of Longmeadow. This route is free from detours in Massachusetts except for one way traffic on Main Street, East Brookfield. In Connecticut traffic is detoured around a bridge at East Windsor.

The second route is via Providence, Westerly and New London to New Haven. This is over route No. 1 to the junction of Main Street and Wood Avenue, Providence, thence over No. 1A to Westerly, R. I., and No. 1 again to New Haven. Good time can be made over this road, a new road between Providence and Westerly having just been completed on this past summer. There are detours on this road, none of which are serious. In Dedham, Mass., on Ames Street there is a bridge under construction which necessitates a detour of about one-half mile at East Lyme, Conn. The Golden Spur Bridge is under construction. Detour at Old Saybrook there is one-way traffic for one-half a mile.

The third route is via Providence, Danielson and Hartford to New Haven. This is over route No. 1 to Providence, No. 6 to Hartford, and No. 5 to New Haven. Of course this is subject to the detour at Dedham, Mass., and also a short detour at Manchester, Conn.

Y.M.C.A. TO GIVE DINNER ON THANKSGIVING DAY

A Thanksgiving Day dinner for the benefit of men away from home on the holiday has been arranged by the dormitory group of young men at the Huntington Avenue branch of the Y. M. C. A., but not to be limited to the dormitory, and every effort will be made to provide Thanksgiving Day cheer to as many men as possible. There will be music, songs, other entertainment features, and probably motion pictures.

The boys' division of the Y. M. C. A. will co-operate in furnishing boys to accompany the men, it being planned to have a boy present as the guest of each man. The committee in charge consists of Charles Butler, Ernest Bourgeois, Harold D. Smith, Clarence C. Beasley, William A. McCormick, R. Grover and A. C. Quintal.

BLACK, Joseph, was the discoverer of what the chemists term the theory of "latent heat"—that is, the definite degree of heat-giving property which a chemical compound is supposed to possess by reason of its natural composition. Until his time, natural philosophers thought this heat or "fire" to be something

for any composer. But Liszt persisted with the work. The music he produced was not an unequivocal success. There are moments of maudlinism, other moments of poorly sustained interest. But he faced a real handicap in presenting for popular approval music based on such familiar lines, which had for many years won a accustomed musical dress. Miss Gray's singing was by no means at its best in this song of Liszt's.

French works drew from the singer her finest efforts. Chabrier's "Les Cigales," Debussy's "L'Isle de Pan" and Dupont's humorous "Song of the three Alberts" were all sung with comparative ease and a real fluency. Enunciation was clearer than in any other language, singable Italian not excepted.

Several times, Miss Gray pressed her voice and made unattractive tones which had promised better outcome at the start. As a result of this occasional incorrect method she was pitched and punned of tonal color. But she lights her work with a pleasant individuality that makes many of her listeners forget technicalities.

Nichols—Hunter

Hester Nichols and Albert Hunter gave a recital of music for two pianos at Jordan Hall yesterday afternoon. One of the comparatively limited resources of this kind of musical literature, they arranged a program which was well-balanced and attractive. But the intrinsic value of the music they chose is not beyond question.

Standing, Alexander and Hunter finished the program with music originally written for paired pianos. A series of variations, listed as Op. 2, was the contribution of the two pianists. The variations, illustrating countryman's dance, provided a long-winded "Romance" by 51. Arensky, the romanticizing Russian, had been for many years a consistent devotee of music for two pianos. Miss Nichols and Mr. Hunter found a "Waltz" and "Nocturne" from the third of his four opus (Op. 23) and a "Polonaise" from still another suite well suited to their needs. Transcriptions rounded out the final group of their program.

The perfection of ensemble which must be a concomitant of all music for two pianos has been only partially realized by Miss Nichols and Mr. Hunter. Whether their work together is very long standing or whether it is a new and untried company of listeners yesterday passed them under a perfect storm. But whatever the cause, their performance, based on the fact which is the sole reason of music such as they played, beyond the defect, there was the fact that much of their music displayed no great structural vitality. But this is easily accounted for when one considers the paucity of music in this field.

DORCHESTER EXTENSION WORK IS MAKING RAPID PROGRESS

Section Three From Geneva Avenue to Peabody Square Expected to Be Ready Next July—Grade Crossings to Be Eliminated

Work on the Dorchester Rapid Transit Extension is progressing rapidly today, according to Col. Thomas F. Sullivan, chairman of the Transit Department of Boston, who expects to witness the completion of Section 3, from just south of Geneva Avenue to Peabody Square, Ashmont, about a mile in length, of which about 4000 feet will be covered, by next July. The lowest bid for this section was for \$626,550, by the C. & R. Construction Company.

The \$10,000,000 extension which will connect Andrew Square with Mattapan when completed, of which Section K already has been finished, will serve thousands of additional Elevated riders when opened to the public and will increase real estate values in Milton, Quincy and outlying sections made more accessible to Boston by this new transportation development.

Tracks which follow the former path of the Shawmut branch of the New York, New Haven & Hartford Railroad will be depressed in order to abolish the existing grade crossings at Park Street, Melville Avenue, Mather Street, Center Street and Welles Avenue. This work consists of the construction of a typical subway section of steel and reinforced concrete, and includes a side platform station between Center and Mather Streets.

Items in Contract

Principal items in the contract for construction include the removal of 80,000 cubic yards of earth, 5000 cubic yards of rock, and the installation of 1500 tons of structural steel and 17,000 cubic yards of concrete. The maximum bid was for \$1,000,000, higher by \$442,850 than the one accepted. The existing wooden bridge at the intersection of Dorchester and Talbot Avenues will be rebuilt on wider lines.

Just south of Geneva Avenue, the extension leaves the grade of the former New Haven right of way and descends about 200 feet at a slight decline to Park Street, where it will enter the portal of the covered section. From here to Peabody Square, a distance of 4000 feet, will lie the covered section, thereby eliminating grade crossings. Immediately north of Welles Avenue the tracks will rise until they meet the surface at Peabody Square.

Peabody Square is on about the same elevation as the New Haven's former right of way and the grade

performers attempting in public work such as that of Miss Nichols and Mr. Hunter are sufficiently uncommon to make their appearances desirable. But the importance of a high standard of playing and a thorough presentation of musical quality is even greater to two players than it is to a single pianist. — C. S. S.

Like a chemical element itself, and they called it "phlogiston." Black, reached his conclusions from experiments which he made with various alkaline earths such as lime and magnesia, transforming them by heat from mild alkalies (carbonates) into caustic alkalies (oxides). Black showed that this change was accompanied by a loss in weight and that the alkali gave off a gas in the process which he named "fixed air," which has since acquired the name of carbonic acid gas. His thesis on the chemical part of these experiments he submitted for his doctor's degree at Edinburgh in 1754, and some five years later he evolved from them his theory on the thermal changes involved.

By other experiments in following years he showed that different materials have different heats which remain constant with any particular material. He was appointed to the chair of chemistry at Edinburgh in 1766 and devoted some 30 years to the study of heat, elaborating his lectures with the utmost care.

JEWELRY RAISE \$75,000 FOR PALESTINE FUND

Subscriptions of approximately \$75,000 toward Boston's quota of \$300,000 in the United Palestine Appeal were announced at a dinner at the Chamber of Commerce last night, which was attended by more than 800 Jews of Greater Boston. The meeting was part of a movement for the raising of \$7,500,000 in America for the reconstruction and colonization of Palestine.

Dr. Chaim Weizmann, of London, president of the World Zionist organization, was the guest of honor, and in an address urged that the Jews of the world should provide for the colonization of 25,000 of their kindred in Palestine every year. David A. Louie, Judge of the Superior Court, acted as chairman. Jacob Rabinovitch will direct the Palestine Appeal campaign in Boston. It was announced. Subscriptions ranging from \$100 to \$5000 were made by practically all of those present.

WILL SELECT LANDING FIELDS

Plans are being made for the selection of 125 airplane landing fields in New England for use of the air forces which will participate in the proposed army maneuvers next year, it was revealed upon the arrival in Boston yesterday of Col. Benjamin D. Foulis, commander of the air forces at Mitchell Field, Long Island. Maj. Gen. Preston Brown, First Corps Area commander, has gone down the coast to confer with Rear Admiral Charles F. Hughes, aboard his flagship Seattle concerning naval co-operation in the maneuvers.

Work Progresses Swiftly

At Section 3 three steam shovels are at work excavating approximately 1000 cubic yards a day. At this rate, it will take less than two months to finish the excavation. The earth so removed is being taken by motor truck to Codman Street where it will be used in filling in for car shops there.

One marvel at the speed with which the work in this section is progressing. The last train ran over the track of the New Haven on Sept. 15, and today the only trace of the railroad is the gates at the grade crossing. The station has been transferred into a construction engineer's office.

Some water was encountered between Melville Avenue and Center Street. In order to remedy this a well was sunk four feet below the surface of the ground. In the early days, as tradition records, there used to flow a stream underground in this section which is particularly low and it is believed it emptied into the Neponset River not far away. The Center Street garage is located over this supposed stream.

Underpinning of the garage is progressing at a good rate of speed, declared the engineer. "The eastern wall being carried by I beams and jacks and the work is being pushed day and night." The

building has been transferred to its permanent foundation. Excavation for the western stairways of the Shawmut Station is half completed. There is a steam shovel at Park Street, one at Melville Avenue, and another between Center Street and

ferred to the department of prints and drawings. In 1912 and again in 1914 he was one of the Lowell Institute lecturers. He is the author of numerous works, among his publications being: "Painting in the Far East," "The Flight of the Dragon," "Catalogue of Japanese Woodcuts in the British Museum," "Court Painters of the Grand Mogul."

CRIMINAL COURT
CASES DECLINE

An indication that crime is diminishing in Boston is contained in the annual report made by John P. Manning, Clerk of the Suffolk County Superior Court, to Sanford Bates, state Commissioner of Correction.

Constructive relief, increased costs for rent, food and clothing, an average of 150 more dependent cases weekly, nearly doubled allowances for the aged, and greater demands for Mothers Aid funds have combined to make the total expenditures of the Boston Overseers of Public Welfare

The estimated expenditure for Mothers Aid this year is \$735,000. In 1921 there were 1391 families so supported or assisted. In 1922 there were 1454; in 1923, the number was 1596; and in 1924 the families numbered 1199.

For dependent aid, that is the groups of the aged, unemployed, those families dependent by reason of incapacitation of their supporters, disability, desertion, non-support and other causes, cost the city last year \$574,577.89. The estimate for the present year which Mayor Nichols was asked to make good by added appropriations, is for \$1,090,000.

Mr. McCarthy said that intemperance in proportion to the total outlay for the dependent aid groups was but 3.5 per cent and that it had shown little or no increase in the last four or five years. Unemployment had a percentage last year of 24.57 while the old age dependents required 32.28 per cent of the total disbursement outside of the Mothers' Aid funds. In the old age group alone the city cared for 1539 individuals last year and for 961 persons out of employment.

INCREASE IN WELFARE EXPENSE EXPLAINED BY CITY OVERSEER

Higher Costs of Rent, Food and Clothing, Greater Demand for Mothers' Aid Fund, and Unemployment Among Contributing Factors, Mr. Hecht Says

Constructive relief, increased costs for rent, food and clothing, an average of 150 more dependent cases weekly, nearly doubled allowances for the aged, and greater demands for Mothers Aid funds have combined to make the total expenditures of the Boston Overseers of Public Welfare

OVERSEA TRADE
TO BE SURVEYED

Division Chiefs of Department of Commerce to Tour New England

Special from Monitor Bureau

WASHINGTON, Nov. 19 — To counter the increasing competition abroad of goods which are made and exported from New England, the Department of Commerce is organizing a definite campaign of co-operation with the manufacturers of the six New England states. A delegation of six division chiefs of the Department of Commerce will leave Washington Dec. 1, will hold meetings in all parts of the territory from Rhode Island to Maine, and will arrange to confer with leading business men and trade associations.

According to Dr. Julius Klein, director of the Bureau of Foreign and Domestic Commerce, the export of leather products, machinery, textiles and specialty products are among the most important factors of business in the New England states, and the increased development of foreign trade from New England in these commodities constitutes an essential element in insuring the prosperity of the industries devoted to their production and of the whole territory.

During the trip the commerce representatives will discuss the problems which confront the separate industries and the means best adapted to stabilize their business and to develop foreign sales in the face of European competition.

According to the commerce department, the combined exports from the six states amounted to \$191,630,493 in 1925, and totaled \$46,400,772 in the first three months of 1926. To increase these sales to the point of profit to New England mills, with consequent benefit to the whole of the region, it is said to be essential that full knowledge be had of the most efficient methods of marketing operation, of competitive conditions abroad and of the practices best adapted to strengthen foreign demand for the products produced in New England.

Outlets of seasonal demand, efficiency in methods of production and trade, effective cultivation of overseas markets, competitive factors, financial problems and other subjects of first interest to New England's trade will be subjected to discussion in the various cities visited by the group.

The itinerary will take the group to Providence, Dec. 3; Boston, Dec. 4; Lowell, Lawrence, Haverhill and Attleboro, Dec. 6; Portland, Auburn and Lewiston Me., Dec. 7; Boston and Lynn, Mass., Dec. 8; Worcester and Brockton, Dec. 9 and Springfield, Mass., Dec. 10.

Arrangements for the trip will be in charge of Harvey A. Sweetser, manager of the Boston district office of the commerce department. Persons desiring to confer with members of the trip should communicate with Mr. Sweetser, 1601 Custom House, Boston, Mass.

SCHOOL DEPOSITS INCREASE

LYNN, Mass., Nov. 19 (Special)—Students at the Eastern Junior High School are hoping to deposit \$15,000 in the school bank during the present school year. Deposits during the first three months of the term will exceed \$4000. The banking system has been in operation since January 1923 and the deposits last year totaled \$11,351.42.

UTILITIES MEN HOPE TO AID BUS TRAFFIC

Principal Problem for Association Next Year

Solution of the problem of regulating interstate motorbus traffic will be the principal subject of committee work in the National Association of Railroad and Utilities Commissioners during the coming year, it is expected by Henry G. Wells, a member of the Massachusetts Commission on Public Utilities, who has been elected first vice-president of the national association.

Other subjects which the organization will follow with especial interest will be the interstate development of super-power transmission and the valuation of public utilities for ratemaking.

The post to which Mr. Wells was advanced carries with it the chairmanship of the executive committee. During the past year he has been second vice-president of the association, and in the regular course of events will be elected its president next year. Election of officers took place at the annual convention last week at Asheville, N. C. Mr. Wells has served on the Massachusetts Commission since its formation in 1919.

BAZAAR VISIT LIKENED
TO SHOPPING ABROAD

Advantages of shopping abroad without the time or expense of getting there were afforded people of Greater Boston at the bazaar given at the Hotel Vendome today to raise money to be distributed by the American Friends (Quakers) Service Committee among approved charitable institutions in Germany.

Dresden china, arts and crafts from Munich, handwoven articles in the old Fresian patterns and choice articles from China were to be found on the art and antique table. German Christmas cakes, pies and breads were at the cake table. Camembert cheese, imported celery and imported toys also were to be had. Mrs. John F. Moors was president of the committee in charge, with Mrs. John C. Lee chairman.

LITTLE HALLS OF FAME

UNDER THE EAVES OF GREATER BOSTON BUILDINGS

Boston has its halls of fame in the form of illustrious names kept in the eaves of the great public buildings, tributes to noble men and women for their contributions to the advancement of mankind. Accounts of some of the achievements of those named in these scrolls of honor are given in a series of cameo sketches presented by The Christian Science Monitor from day to day.

A French astronomer and a Scottish chemist, contemporaries in the fields of natural science in the latter eighteenth century, are the subjects of today's sketches. Their names, Lalande and Black, appear on the Boston Public Library. A quality common to the two men was an extreme interest not only in discovery, but also in the work of formulating their writings and lectures so carefully and clearly as to pass on their learning with interest and accuracy to students and laymen. Both filled professorships for long terms of years.

LALANDE (La-lan'), de, Joseph

"Telesius on Astronomy" which he published in 1764, bringing together in an extensive summary the theory and the practical aspects of this natural science up to his time. He acquired an interest in astronomy when, as an earnest young student at Lyons, he saw the great eclipse of July, 1763.

When his parents later sent him to Paris to study law, he attended also the lectures of Messier and Lemonnier on astronomy, soon becoming their favorite pupil. The Academy of Sciences chose him at the age of 19 to be sent to Berlin to make "the portable observations" and upon his return approved his work and made him a member of the academy.

He next ascertained the diameter of the moon, and then began to work on a theory of the planets. Following this he assisted in making computations of the effect of the return of Halley's comet about 1759, upon the movements of the planets. He wrote many articles for learned publications and for a time edited one. Succeeding Delisle as professor of astronomy in the College of France, he fulfilled the duties of that position with great skill for 46 years. As a professor and a writer he did more than any other astronomer of his time to stimulate widespread interest and study in this subject.

BLACK, Joseph, was the discoverer of what the chemists term the theory of "latent heat"—that is, the definite degree of heat-giving property which a chemical compound is supposed to possess by reason of its natural composition. Until his time, natural philosophers thought this heat or "fire" to be something

for any composer. But Liszt persisted with the work. The music he produced was not an unequivocal success. There are moments of maudlinism, other moments of poorly sustained interest. But he faced a real handicap in presenting for popular approval music based on such familiar lines, which had for many years won a accustomed musical dress. Miss Gray's singing was by no means at its best in this song of Liszt's.

French works drew from the singer her finest efforts. Chabrier's "Les Cigales," Debussy's "L'Isle de Pan" and Dupont's humorous "Song of the three Alberts" were all sung with comparative ease and a real fluency. Enunciation was clearer than in any other language, singable Italian not excepted.

Several times, Miss Gray pressed her voice and made unattractive tones which had promised better outcome at the start. As a result of this occasional incorrect method she was pitched and punned of tonal color. But she lights her work with a pleasant individuality that makes many of her listeners forget technicalities.

Nichols—Hunter

Hester Nichols and Albert Hunter gave a recital of music for two pianos at Jordan Hall yesterday afternoon. One of the comparatively limited resources of this kind of musical literature, they arranged a program which was well-balanced and attractive. But the intrinsic value of the music they chose is not beyond question.

Standing, Alexander and Hunter finished the program with music originally written for paired pianos. A series of variations, listed as Op. 2, was the contribution of the two pianists. The variations, illustrating countryman's dance, provided a long-winded "Romance" by 51. Arensky, the romanticizing Russian, had been for many years a consistent devotee of music for two pianos. Miss Nichols and Mr. Hunter found a "Waltz" and "Nocturne" from the third of his four opus (Op. 23) and a "Polonaise" from still another suite well suited to their needs. Transcriptions rounded out the final group of their program.

The perfection of ensemble which must be a concomitant of all music for two pianos has been only partially realized by Miss Nichols and Mr. Hunter. Whether their work together is very long standing or whether it is a new and untried company of listeners yesterday passed them under a perfect storm. But whatever the cause, their performance, based on the fact which is the sole reason of music such as they played, beyond the defect, there was the fact that much of their music displayed no great structural vitality. But this is easily accounted for when one considers the paucity of music in this field.

NEW ENGLAND ACHIEVEMENT

(Continued from Page 1)

addresses on selling New England and New England products with Louis K. Liggett of Boston, chairman of the "selling" committee, and Col. Frank Knox, publisher of Manchester, N. H., and chairman of the committee on public relations and community organizations, as speakers. The conference ended with 10-minute talks by experts in the various fields of agriculture, commerce and industry.

Greater Permanency

At the meeting of the council yesterday, at which only about 60 of the 72 members were present, a change in the rules was voted in order to give a greater degree of permanency to that body than the present rules provide by avoiding a complete change of membership each year. The change provides that at a meeting of the state councils today of the 12 present councils from each State be re-elected and that two-year terms for the 36 councillors elected at each annual session hereafter be established.

The council voted a budget of \$100,000 for the next year, twice the amount of last year. The executive committee will appropriate this sum. The council also voted \$5000 for six months to continue the survey of New England industrial conditions by the United States Department of Commerce, the council furnishing the personnel for this work.

Springfield has already presented an invitation to the conference to hold its third convention in that city, but the place for this conference will be decided upon at a later date by the executive committee.

The first day's attendance was estimated at 1200, and all the hotels of Hartford were taxed to the utmost to accommodate all the guests. The crowds in the lobby of Hotel Bond were entertained with an unexpected spectacle shortly before noon when the "Spirit of '76" and the "Spirit of 1926" entered the hotel.

"Spirit of '76"
Three Manchester (Conn.) men, Joseph Ferguson, M. J. Barry, and Lewis Palmer, portrayed the "Spirit of '76." They wore costumes of the Revolutionary War period and rode a horse and a drum. They preceded the delegates to the ballroom where 500 delegates and guests, including several women, were guests of the Hartford Chamber of Commerce at luncheon. A group of Boy Scouts, carrying a banner with the legend, "New England United," was the "Spirit of 1926." After the luncheon the life and drum corps led the delegates up the Hill to the Broad Street auditorium of the Hartford Public High School.

An important plan was presented yesterday afternoon by Edward O. Goss, president of the Scovill Manufacturing Company of Waterbury, Conn., and chairman of the council's power committee. Mr. Goss recommended a plan whereby the public utilities commissions of adjoining states in New England may have joint jurisdiction over rates on power transmitted across state lines. The plan consists of a voluntary agreement which it is proposed New England power companies will make part of their future contracts for the interstate sale of power in New England.

This agreement provides that in case of complaint on the part of either company party to a contract for the interstate sale of power, either party may request the representatives of public utilities commissions of the respective states sit jointly in consideration of the interstate rate complained against and that the companies shall accept such rate as may be fixed jointly by the two state commissions.

In the cases of companies having but a single contract for the interstate sale of power, the report states, an additional clause of the proposed voluntary agreement is suggested to provide that if an interstate rate shall appear to a commission of any state to be a factor in another rate case before the commission, it may ask the commission of the other state to join with it in considering the interstate rate.

Series of Conferences
Mr. Goss suggested that this voluntary agreement be worked out in a series of conferences, begun by the council last spring. The groups taking part in these conferences were special representatives appointed by the six governors to co-operate with the New England council in relation to New England power problems and a committee created by the New England power companies to represent them in co-operation with the council. Five governors appointed members of their public utility commissions. These two groups in conference with the Goss committee found that the state commissions felt a twilight zone was developing in New England in which regulation of power companies under existing laws was not effective due to the development of interstate transmission of power.

spirit of co-operation shown by all parties concerned.

Power for the Farms
A brief discussion followed these addresses, in which Frederick E. Duffy, West Hartford dairyman, asked that the committee turn its attention to making electric power more cheaply available to the farms and agricultural districts of New England, and in which a New Hampshire delegate asked if the action of the power committee in recommending the Goss plan was unanimous. Mr. Goss replied that it was.

Herbert Myrick, president and editor-in-chief of the New England Homestead of Springfield spoke briefly on the St. Lawrence power project. This project has figured largely in the economic and political life of New York, he said, while New England has been "asleep at the switch."

"Thus far, the State of New York and the Province of Ontario have worked on this project though those two regions alone had rights in the St. Lawrence," he said, "whereas New England and Quebec have equal rights with them. Power from the St. Lawrence to be available throughout rural New England at lower rates than prevail in cities is what we want. Electric power at low rates will make possible the new agriculture; and gradual decentralization of industry from cities into rural districts. So vast are the possibilities of the St. Lawrence project that it makes Muscle Shoals look like 30 cents."

Mr. Myrick said that the power interests want to monopolize the St. Lawrence so they can maintain high rates even after this new supply becomes available.

"Our states should unite with the public in New York State," he declared, "in requiring that the United States Government's assent to the St. Lawrence project should be given only upon condition that this end, and the co-operation of New England producers has been the chief obstacle in the path. When women are invited to take charge of a section of the New England Council it will be an indication of the dawn of a new day. Eighty per cent of the New England budget is expended by the women of our states. If we cannot satisfy their desires we may well despair of reaching women in other parts."

"The home market is the first market that New England should capture in its campaign to secure trade. Every advantage of transportation and sentiment argues insistently to this end, and the co-operation of New England women is essential. If it is to achieve success, the more quickly the manufacturers of New England recognize this fundamental fact the more quickly shall we have laid the foundation for building an expanding trade."

Governor Trumbull
Governor Trumbull made three specific recommendations: that every effort be made to sell New England to the school children of New England; that every effort be made to secure co-operation of the press in presenting New England to New Englanders in a constructive manner; and that an endeavor be made to bring about in New England a program which he will outline in his inaugural address to the 1927 session of the General Assembly here—that is, the creation of a State commission on advertising and publicity with an adequate appropriation.

Mr. Lawrence, president of the conference, also spoke briefly at the banquet, commending the governors of New England for their co-operation in the present work. E. Kent Hubbard, president of the Manufacturers' Association of Connecticut, was toastmaster. A program of songs was sung by the Manufacturers' Chorus of Bridgeport.

The New England Transportation Company, the motorcoach subsidiary of the New Haven Railroad, has furnished several of its large maroon parlor coaches for the free use of delegates for tours about the city.

Dr. Frederick Vining Fisher presented stereoscopic slides showing the scenic beauties of New England at the afternoon sessions. The pictures included scenes from the rugged Maine country, the hills of New Hampshire, the famous seashore resorts of Massachusetts and Rhode Island, a skyline of Providence and other scenes.

Mr. Young's Address Read
Owen D. Young, chairman of the board of the General Electric Company, was scheduled to be the third speaker, but he was unable to be present. His speech was read by E. G. Buckland, vice-president of the company, and a member of the Connecticut council.

Mr. Young's address carried several points further the program of pooling resources he outlined before the Worcester conference a year ago. At that time he suggested a great pooling of New England power from which all parts of New England could draw. Last night he recommended that in addition to removing artificial barriers which prevent an unrestricted use in New England of New England power, New England also remove certain barriers of race and social levels which hamper democratic production of business; that she remove the barriers of "vested habits"; and that she also seek to remove barriers standing in the way of a pooling of her railroad transportation resources.

Future Graphic Art Center

The 10-story Harbor Trust Building at 470 Atlantic Avenue is expected to be the Headquarters of the Printing and Photo-Engraving Trade of New England, Many of Which Concerns Are Now Domiciled There.

ENGRAVERS OPEN IN NEW BUILDING

Folsom Company Greets Trade at Reception and Luncheon

Eventually, it is expected, the new 10-story Harbor Trust Building at 470 Atlantic Avenue will become the center of graphic art in Boston and yesterday a step in this direction was taken when more than 800 representatives of printing and photo-engraving interests of New England were guests of the Folsom Engraving Company at a luncheon and reception which marked the formal opening of its new quarters on the eighth floor of the building.

Although construction was completed hardly more than a month ago, other commercial printing and engraving establishments have taken lease on portions of the building and it is expected that the rest will soon be occupied.

The building, which is of cement construction from designs by Blackall, Clapp & Whittemore, architects, at 31 West Street, is said to be ideally suited for the engraving and printing trade. Two-thirds of the outside wall space is composed of glass. The city's disposal wharf on the north side, Fort Point channel to the east, and Atlantic Avenue to the west, admit sufficient natural light. That the harbor building can never be closely built around by other equally high buildings seems to be assured by its location.

The acquisition of quarters in the new building gives the Folsom Company more than two-thirds as much additional space than it had at 83 Pearl Street. Not only does the location offer more adequate and wider range of service to its patrons, but enhances the working conditions for its employees. Lucius B. Folsom, president and treasurer of the company, personally welcomed visitors and conducted them on a tour of inspection through the plant. Messages of well wishes were received and numerous gifts of cut flowers and potted plants were received. Mr. Folsom was presented with a large bouquet of red roses from the employees.

Special interest was shown by the visitors in the color department. Although the process involved in making color plates is similar to that in the printing and etching branches, the separate filtering out of each color in a picture and the ultimate printing of one over the other to gain the exact reproduction evoked much attention.

A display of engraved objects revealed the type of work done in the Commercial Gallery, where detailed reproductions are made of such objects as machinery and parts, radios, flowers, hats, furniture, jewelry, models, pottery and interior views of industrial buildings.

CURRAN COMMITTEE
EXPENDED \$2673.62
The George N. Curran campaign committee today reported to the Secretary of State's office that the

committee received contributions of \$2684 and made expenditures of \$2,673.62. This committee was organized in behalf of the candidacy of Mr. Curran, city councillor, who opposed John A. Kelley for the Democratic nomination for sheriff in the September primaries.

Political committees have until Dec. 2 to file expense reports. Expense returns from candidates in the recent election continue to come in late, the time having expired on Tuesday last for filing the same. Nine returns were received today, including that of Hugh A. Clegg, Senator of Methuen, who spent \$290.50, and that of Harrison H. Atwood, Representative-elect of Boston, who expended \$379.25.

COURT MAY GET WIRING DISPUTE

Statler Hotel Counsel Indicates Action in Reply to Telephone Company Official

Indications today were that the dispute between the Hotel Statler and the New England Telephone & Telegraph Company as to whether the inside wiring for the building shall be done by employees of the telephone company or the International Brotherhood of Electrical Workers may be taken before the Supreme Court of the State for a ruling. The hearing of the case by the Massachusetts Public Utilities Commission was postponed until Monday morning.

This latest development in the wire tangle arose when Henry C. Attwill, chairman of the commission, asked whether it would be a legal or illegal strike if union labor walked off the Statler job as they have threatened to do so should telephone workers try to install the wiring.

While James N. Clark, counsel assisting Charles S. Pierce, vice-president of the telephone company, was quite sure that it would be "plainly an illegal strike," Warner V. Taylor, counsel for the hotel chain, was not so certain and answered, "There is no way of knowing until the Supreme Court decides it."

In reference to the practice for inside wiring in New York, some of which is done by other than telephone employees, George K. Manson, chief engineer, rated the work done by the company's men as 100 and that done by contractor's men as only 70 since he said there was more need for supervision and inspection on jobs performed by the latter than in jobs done by the former.

Equipment on a telephone subscriber's premises cannot be dealt with separately from the remainder, but the whole must be considered as a unit, he added after Mr. Taylor had offered to stand any loss to the telephone company arising from the Statler installing its own wiring as the attorney had suggested in order to avoid labor difficulty.

Mr. Manson continued that all parts of a system must be co-ordinated and that if a change is made in one part, the effect on every other part must be considered. If work on one part of the system were to be done by others than employees of the telephone company, he said, the company would be at a loss to determine the design of the other parts not of the same grade.

He said that the company would be forced to assume that all stations put in by subscribers were of the lowest grade, and that the state of things would be "unsound economically and would result in the sacrifice of the progress of years."

LEGION PLANS GIFTS TO DISABLE VETERANS

The distribution of holiday boxes of useful gifts to disabled Massachusetts veterans by the American Legion will be repeated this year. It was announced today by Richard F. Paul, chairman of the Christmas committee of the Legion, in a letter to the various posts of the State inviting contributions to the fund for that purpose.

Each post is asked to give from \$5 to \$10. Last year the fund exceeded \$2500, and gift boxes were sent not only to veterans in the State but also to former Massachusetts men now in distant places such as California, New Mexico, Montana or Nova Scotia.

FILM CO-OPERATIVE MEETS

International night was observed at the monthly meeting of the Film Co-operative Association of Women's Clubs held last evening. With Miss Mabel Westman, president, in the chair, Robert L. chairman of the arbitration board of the F. C. A., gave a brief talk on the aims and purposes of the board. Carl F. Lamson, accompanist for Fritz Kreisler, and Mrs. Lamson, gave a short musical program and Miss Florence Colby, a member of the F. C. A., gave several cello numbers.

HISTORY FUND SOON TO START

Opening Campaign in Massachusetts Waits Naming of State Chairman

Prof. James P. Baxter 3d of Harvard University, executive secretary for Massachusetts in the new group plan to win the co-operation of the New England states with the American Historical Association to promote American history and its study, said today that Massachusetts would commence the active campaign for raising its quota of the proposed \$1,000,000 endowment fund for historical researches as soon as a local chairman could be appointed.

This, Professor Baxter thought, would be within a week and it was hoped that the campaign in Massachusetts would have progressed sufficiently by Dec. 23, the date of the annual meeting of the American Historical Association in Rochester, N. Y., to make possible an informative report on Massachusetts' share in the fund.

Reports from States Due
When the meeting convenes in Rochester reports will be heard from the other New England States where committees have been appointed and are at work. Kenneth M. C. Sills, president of Bowdoin College, is honorary chairman for Maine and Prof. Herbert C. Bell of the history department at Bowdoin College, executive secretary; for New Hampshire, John G. Winant, Governor, is honorary chairman and Prof. Wayne E. Stevens of Dartmouth College executive secretary.

Prof. Theodore Collier of Brown University serves the honorary chairmanship for Rhode Island and Prof. Charles M. Andrews of Yale University for the Connecticut representation.

The belief is commonly held through the ranks of the American Historical Association that the time has never been more ripe for a renaissance of interest among students in historic study, with particular emphasis placed upon the evolution of the United States and its influence upon world affairs. More closely organized study of such facts, influences and events, together with the promotion of more accurate understanding of the causes which have contributed to the outstanding events in American history will be primary factors in the program made possible by the endowment.

Theme for December Meeting
"Development of Historical Research" has been announced by Prof. Dana C. Monroe of Princeton University, president of the association, as the general theme of the December meeting, with reports from the state endowment committees and a report from the national endowment committee, headed by Albert J. Beveridge, former Senator from Indiana, for a very important administrative item in the program.

On the opening day of the meeting a joint meeting will be held with the Agricultural History Society, followed by a section devoted to ancient history. Among the numerous sections of more than ordinary program interest will be one on "The Far East" as topic of a luncheon conference presided over by Kenneth S. Latourette, professor of missions at Yale University. Papers will be read at other sessions by Carl Becker, professor of history at Cornell University; by Elmer Barnes, professor of historical sociology at Smith College; by Frederick J. Taggart, professor of social institutions at the University of California.

On the second day of the conference a joint session will be held with the Massachusetts Historical Association, the meeting to be presided over by Charles Homer Haskins, dean of the graduate school and professor of history at Harvard University. Harvard University has furnished representation in the program in the luncheon meeting on modern history to be presided over by Prof. Archibald Cary Coolidge.

BIMBA SPEECH TO BE ALLOWED

(Continued from Page 1)

It is understood that some time ago an informal request was made upon the public buildings department for a permit for the use of Faneuil Hall on Sunday night. The Mayor said that he knew nothing of that fact. Inquiring of the superintendent of public buildings, he was informed that such an informal request had been made. Thereupon Mayor Nichols declared that he would not interfere and if the permit was formally asked for as far as he was concerned, it could be granted.

Speaking of the refusal to allow Mr. Bimba to speak early this year, Dr. Harry F. Ward, chairman of the American Civil Liberties Union said today: "This was not the only instance of suppression of free speech in Massachusetts. In Fall River and in Lawrence, city officials have recently tried to break up and forbid meetings because they feared sedition. Unhappily, because they did not agree with the views of the speakers. We believe that no city official has the right to forbid or break up a peaceful meeting. If the speaker commits an offense he may be arrested and the court will then by jury trial decide whether or not he is guilty."

PORTLAND TO HEAR SECRETARY HOOVER

PORTLAND, Me., Nov. 19 (AP)—Herbert Hoover, Secretary of Commerce, will speak in Portland on Saturday, Nov. 27, on the policies of the present Administration, Daniel S. Field, chairman of the Republican State Committee, announced tonight.

Mr. Hoover will talk at a dinner of the Cumberland County Republican Committee at the Congress Square Hotel in the interests of Arthur R. Quidd's election to the United States Senate. Mr. Hoover's speech will be broadcast from Station WCHS.

EXPORT CLUB LISTS SPEAKERS

O. K. Davis, secretary of the National Foreign Trade Council, and Franklin Johnston, publisher of American Exporter, will address the members of the New England Export Club of the Boston Chamber of Commerce, next Tuesday evening, at a dinner-meeting of the organization at the chamber building. Mr. Johnston has recently returned from a trip to South America.

SCHOOLBOYS HEAR BANKER

Good character, credit and capital are essential to real success in the business life, John Galucci of the Home Savings Bank of Boston, told boys of the High School of Commerce, addressing them today. The school savings bank will offer opportunity to build up capital, and this will prove of value far beyond the actual amount that may be saved, he said.

LL fine pianos of the world have something in common with the Chickering... that they employ fine materials... that they are modeled after the Chickering in the use of the full metal plate... the overstrung scale... and other original developments of our house. A chosen few have also their years of good workmanship... their list of loyal purchasers... their following of famous musicians. But the things which are common to many should not be sufficient for you... as they are not for us. We ask that you compare the Chickering with any other you may have thought of purchasing. You may rest assured we should not frankly court comparison were we not quite certain of your verdict. Make this a Chickering Christmas.

Chickering Hall offers Chickering pianos from \$875 up Ampicos from \$695 up - - - re-made instruments for as little as \$125. All are sold on easy terms. Your present piano taken in part payment for another piano. Open Evenings until Christmas.

Havana Works With a Smile to Restore Its Civic Beauty

Streets Cleaned; Trees Replaced, Now Green With New Growth—Storm Havoc Overcome

HAVANA, Cuba (Special Correspondence)—Havana, like the princess of the story books, awoke the morning following the recent hurricane to find herself in rags and tatters. The recovery of her former beauty and dignity has been akin to magic. By the time the first contingent of winter sojourners passed beneath the coral walls of old Morro Castle, the work of rehabilitation will have been completed and nature will have restored the foliage to its former intensity and luxury.

Havana, Pearl of the Antilles, with its mass of white walls flashing brilliantly among a wealth of tropical verdure faces a cobalt sea with an azure sky overhead. The cream yellow of the walls is marvelously contrasted with the deep vivid green of the foliage. One demands the other! Havana without its foliage is Paris without its boulevards. The people of Havana found almost every tree toppled by the storm. A standing tree was a rarity.

Restoration Begins at Once
On the day following the storm the Government began its work of restoration. Every available workman was given something to do. Streets clogged by debris were quickly opened; trees cut back and placed upright; first in Central Park and the Prado and then along the many streets and boulevards; vines and bushes clipped; telephone and electric light poles straightened; wires untangled, everything with the utmost order without hesitation. Trucks of all descriptions from the lumbering giants of the Public Works Department to the scurrying delivery motors of the tailor and the florist, went to and fro over the city bearing workers with hoisting tackle, implements and building supplies. Long caravans returning with debris pressed steadily toward the harbor, where their contents were towed out to sea by every available tug and barge.

Within a few days almost every tree was standing and growing but what a different aspect. To a country that knows no winter, it was as if winter had passed in the night and left the earth bare and brown, trees and vines devoid of leaves. There is an old saying in Cuba to the effect that even the wooden fences grow. If winter passed in the night, then spring too has passed in the night, for already the grass begins to flash its former emerald hue and the tender green of a new growth is fast covering the bare branches of the trees.

The Malecon as of Yore
The Malecon, the esplanade along the sea, built on the coral rocks and stretching in a great bow to the mouth of the harbor, from the Vedado to the ancient walls of Morro's companion castle, La Punta, looks now as it looked of yore. Here and there walls have been demolished but the builders are quickly placing one stone upon another until few signs of the storm will remain. Even the work of extending the Malecon blocks beyond its present termination has continued almost without interruption.

The Maine Memorial, the only monument shattered by the storm, presents even now a by no means ungraceful outline and plans for its speedy restoration are in progress. That which impresses most is the desire and determination of every one to work without ceasing, to restore the city, and they are succeeding beyond the expectations of the most sanguine. Prompt and efficient administration properly policed the streets immediately following the storm, and prevented disorder.

Stores downtown are presenting normal appearances. "Business as usual" with here and there a show window missing. Bargain sales are a little more in evidence but the clerk is as courteous and the shopper in as great an abundance as ever. Taxis busy as ants still chase a fare with all the abandon of old.

Restoration Goes On
Electric signs that were twisted masses of steel are being replaced. Signboards have been reset. Construction work in the harbor continues.

struction of a large sugar mill at Toledo just outside Havana. The day following the storm 500 men were hard at work and by the first of the year the mill, it is expected, will once more be operating.

Public utilities have scarcely been behind the inhabitants. The water department strove night and day to repair serious breaks in the works made by the swollen Alameda River with the result of but few days scarcity of water in higher sections, and almost uninterrupted service in the lower districts. To the untangled tangle of electric light wires seemed hopeless but the candle supply of Havana was not even seriously threatened. Street cars were in evidence the day after the storm and service has long been normal. Only the telephone company finds a speedy restoration difficult in some of the residential districts and largely because the system is automatic and supersensitive.

ASKS "STRICT ACCOUNTABILITY" ON QUESTION OF GERMAN CLAIMS

Mr. Beck, Formerly United States Solicitor-General, Says Germany Should Pay for Property Losses

Special from Monitor Bureau
WASHINGTON, Nov. 18.—A demand that the "strict accountability" policy laid down by President Wilson early in the war be adhered to and that Germany be required to pay for property losses was voiced by James M. Beck, formerly Solicitor General of the United States, appearing before the House Ways and Means Committee, which is conducting hearings on the alien property controversy. Mr. Beck came before the committee as the representative of insurance companies that wrote marine insurance during the war.

In his remarks Mr. Beck took sharp issue with those who would have the Federal Government finance the settlement of American claims against Germany. Such advice was given the committee by Andrew W. Mellon, Secretary of the Treasury, through the Undersecretary, Charles Winston, who appeared before the committee as Mr. Mellon's personal representative. He suggested that \$100,000,000 be appropriated by Congress to accelerate the settlement of American claims.

"Why should the American taxpayer advance the money to liquidate these debts?" Mr. Beck demanded. "The public treasury is not concerned in the adjustment of the matter. The way to do this thing, is to have Germany finance this proposition and then turn back German property."

Under the recent decision of the Supreme Court in the Chemical Foundation case, Mr. Beck argued, German nationals, as nationals, were held to have no share in the seized property and the Berlin Treaty carried full absorption of any responsibility from the United States to Germany on account of this property. He pointed out, however, that it has been the time-honored policy of the United States to regard private property as sacred and, he recalled, further, that President Wilson had repeatedly declared that America had no quarrel with the German people.

The former Solicitor-General, in defending the claims of his clients, contended that the insurance companies had contributed greatly to the success of this country's shipping operations during the war. Mr. Beck's testimony was preceded by a debate between attorneys representing American and German claimants. The discussion ensued following remarks by William C. Miller, strong of New York, representing American interests, to the effect that \$70,000,000 worth of the German property in the custody of the United States had been used, with the consent of the German owners, to assist Germany in her prosecution of the war. He also declared that many of the German industries and patents were established to prevent America preparing adequately to meet an enemy.

Krupp Interests Charged
Mr. Armstrong used, quotations from reports of A. Mitchell Palmer, formerly Attorney-General, and from statements of Reed Smoot (R.), Senator from Utah, and other members of Congress to support his charges. He asserted that out of 45 names of alleged German investors, who had claims amounting to \$39,000,000, he found that five were children of

the owner of the Krupp arms and munition plants.

He added, that it had been charged, and not successfully controverted, that the Kaiser and members of the Junker class, were heavy investors in many of the seized German properties, particularly the North German Lloyd Steamship Company.

Enlarging on his charges against the steamship company, Mr. Armstrong asserted that a report had been made to Congress in July, 1918, which declared that employees of the corporation had transmitted to Germany information about American activities and shipping and that when the United States entered the war, machinery and equipment on seized German ships had been sabotaged.

These allegations were challenged by Edgar W. Hunt of New Jersey, general counsel for the North German Lloyd Company since February, 1917. He declared that subsequent to April 6, 1917, the conduct of the company was above question. He denied the statement in the Palmer report that the Kaiser was a stockholder in the steamship company, although admitting under the questioning that there was no way of ascertaining who was or was not a stockholder.

Judge Parker Heard
In response to further examination, he stated that prior to the war no stock in the company could have been held by anyone not a German citizen.

The argument opened the subject of German propaganda and activities in America preceding the declaration of hostilities. A debate ensued in which members of the committee took part. Mr. Armstrong declared that he did not object to returning German property, but denied that there was any American precedent or traditional policy which might legally require such a disposition.

Appearing before the committee at its request, Edwin B. Parker, umpire of the American and German Mixed Claims Commission, informed the representatives that up to November 13, 1926, the tribunal had allowed \$141,456,000 in claims to American nationals and the United States Government. This figure, he divided as follows: \$99,421,000 for private claims and \$42,034,000 for government charges. Judge Parker, while declining because of his position on the commission to give an estimate of the total remaining claims, told the committee that the American agent on the commission had advised him that these claims would not exceed \$40,000,000. This would bring the total of awards to approximately \$182,000,000 instead of the \$190,000,000 that has been used in tentative settlement computations.

Judge Parker stated that there were 122 cases on the docket still undetermined.

ROLL-CALL MACHINE
FOR HOUSE PROPOSED
The calling of the roll by machine in the Massachusetts House of Representatives, instead of by the present laborious, time-consuming method, is one of the possibilities which may be discussed in the coming legislative session.
A bill which would authorize the appointment of a committee of five members to study the practicability of an electrical or mechanical roll-calling apparatus, was filed with the clerk of the House yesterday by Peter J. Fitzgerald, Dorchester, state Representative, at the request of M. A. O'Brien Jr. of Dorchester.

EMPLOYEES BUY
B. & M. STOCK
Will Pay by Dividends and
Forty-Four \$2 Monthly
Pay-Roll Deductions
Approximately 1000 employees of the Boston & Maine Railroad are now its stockholders as a result of the plan by which they have been enabled to subscribe to the new 7 per cent prior preference stock. The time for subscription closed on Nov. 10 and notices of allotments will go out in a day or two.
The employee subscriptions to the limited amount of stock which was made available under this first offering represent an aggregate share in the railroad of some \$500,000 now held by its employees. In addition to such stock as they may have owned previously.
The plan under which the 1000 employees of the Boston & Maine have been able to join the ranks of stockholders, buying shares on the installment plan with deductions from payroll at the rate of \$2 per share monthly, grew out of requests by a number of them for opportunity to share in the improving condition of the road.
The board of directors then acquired for the purpose the prior preference stock which was offered under a plan prepared by a special committee of railroad officials. These shares, bearing cumulative dividends at the rate of 7 per cent per annum and entitled to all dividends in full before dividends can be paid on any other class of stock, have been selling currently at \$105 a share.
Under the plan, the employee-

NATIONAL PARKS
HELP EDUCATION
Adequate Funds Forecast at
Field Officers' Conference
Special from Monitor Bureau
WASHINGTON, Nov. 18.—Development of the national parks as educational-recreation centers under adequate appropriations by Congress is contemplated in the program being worked out by the headquarters division of the National Park Service in conference with the field directors.
Such developments as the establishment of nature guide services in Yosemite and other parks, and field schools of natural history where students may receive university credits, are opening up a large field of educational service which will be developed under the direction of the National Park Service, according to plans laid at the conference being held at the Interior Department.
John J. Tigert, Commissioner of Education, spoke of the prominent part which the national parks play in the general education. The Bureau of Education, Dr. Tigert said, will cooperate actively in the work of the park service wherever it touches upon the educational uses of the national parks.
Louis C. Cranston (R.), Representative from Michigan, chairman of the subcommittee of the House Appropriations Committee, handling interior department appropriations said that the needs of the park service will be adequately cared for in the pending interior department appropriation bill.
"There is no branch of the Government service that stands higher in the esteem or commands more of the interest of Congress today than the National Park Service," Mr. Cranston assured the park executives and field agents.

CLIFFE GIRLS HEAR TALK
"Why Are We Here?" was the subject of a vocational talk given to Radcliffe girls in the college theater this afternoon by Miss Florence Jackson, who for a number of years was director of the appointment bureau run by the Women's Educational and Industrial Union of Boston and is now associated with Wellesley College and visiting lecturer at women's colleges. She enumerated many unusual occupations which women are filling successfully and emphasized the importance of selecting carefully the one to be followed, something that will give joy in the doing as well as bringing financial reward.

UNIVERSITY CLUB
TO AID COLLEGE MEN
Initial steps were taken last night by the Connecticut Educational and Vocational Guidance of the new University Club to lay out a plan of procedure in the plan to obtain suitable employment for young college men.
At a dinner the work was indorsed by Dr. James R. Angell, president of Yale, and Dr. John M. Brewer of Harvard. Three points stressed by Dr. Angell were helping the boy find himself, outlining specific qualifications needed in business, and the establishment of a bureau such as

the one just projected. Dr. Brewer confined himself to an outline of vocational guidance and suggested ways to co-ordinate the work with the colleges.
Joseph Powell, president of the club, was toastmaster. The following officers were elected by the committee: Nat W. Emerson, chairman; Walter Resor, vice-president; Felix Vorenberg, treasurer; Charles Ely and A. Lincoln Flene, executive committee.

RECORD ONLY
"I Record only
the Sunny Hours"
Kansas City, Mo.
Special Correspondence
CERTAINLY the establishment conducted by P. R. Tondro on East Fourteenth Street of this city is for the cleaning and pressing of clothing. Does not the sign which adorns its front proclaim this fact, and does not every evidence of activity within attest it? Yet there are not lacking those in considerable numbers who regard it as holding promise of other things.
Let us hear from Tondro himself. "Every morning when I arrive for work," he says, "a dozen birds are waiting more or less patiently for me on their ledge perch across the street. Many times a day they fly down to my door and ask for food, just as plainly as birds can ask; and they wait for me to know that it is always ready for them."
Last winter, when snow and ice covered the ground and food for the birds was difficult to find, Mr. Tondro began feeding the pigeons and sparrows, and it has continued as such a well-established custom that they "patronize" his shop regularly and contentedly.

Houston, Tex.
Special Correspondence
VISITOR to this city was buying a ticket to see the *De Witts* pictures, when she noticed along the edge of the sidewalk a double line of poorly-clad but eager-eyed boys. "They're newsboys," said the cashier, in reply to the visitor's questioning. The manager is treating them. My! but I wish I had time to peek in at them. It will give you a thrill to hear them enjoy it."
And it did. The visitor had been regretting having to view the picture alone, but with dozens of wildly enthusiastic boys around her she felt anything but lonely. The picture was voiced in spontaneous bursts of cheering and clapping. Though many of the lads looked as if they knew no home but the city streets, and had had no training but hard knocks, yet not one note of ribaldry mingled with their hearty enjoyment.
Upon further inquiry the visitor learned that this manager makes a point of treating the newsboys and the children of the various charitable institutions of the city to each worthwhile picture that is shown in his chain of theaters.

UNITED STATES SEEKING PEACE IN NICARAGUA

Government Expected to Use
"Good Offices" Through
Diplomatic Channels

WASHINGTON, Nov. 19 (AP)—While news of revolutionary activity against the Calles regime is emerging from Mexico with increasing volume, the Washington Government is studying silently the request of President Diaz of Nicaragua, for aid in restoring peace there in the face of "Mexican aid of revolution and armed intervention in Nicaraguan political affairs."

The proposal of the new Conservative President of Nicaragua leaves the United States broad latitude in any means it might care to employ in aiding his Government.

For the moment, it appears most likely that further efforts to restore peace in Nicaragua through the exercise of American good offices will be attempted. If successful, such efforts could be expected to modify, if not eliminate, the Mexican angle of the situation by destroying the market in Nicaragua for guns and ammunition from Mexico.

Mexico City Interested
Meanwhile, Secretary of State Kellogg's expression of concern over outside interference in Nicaraguan affairs and the obviously increasing tension in Mexican-American relations is being discussed with intense interest in Mexico City, where a feeling prevails that the situation contains rather serious aspects.

Lacking official representations from the American Government, Mexican officials have declined to comment directly. Their attitude, however, is that it is only natural for Mexico to desire a sphere of influence in Central America, where, they feel, its interests are similar to those of the United States and the American Government has no right to criticize Mexico for these desires, and that, while individual Mexicans may have aided Nicaraguan revolutionists, the Calles Government has not interfered in Nicaraguan affairs.

Furthermore, they argue, individual American citizens have been guilty of similar activity in behalf of revolutionists in Mexico and other Central American countries.

Efforts to ascertain here, what might happen if the new diplomatic attempts to end the Nicaraguan disturbances should be unsuccessful, officials also have refused to comment on a suggestion that the Diaz Government might be permitted to obtain, such as from the United States through a lifting of the embargo on such shipments to Nicaragua.

Silence Tells Situation
Out of the silence that veils the situation here has come no indication that new instructions have been forwarded, since the receipt of President Diaz's request, either to President Denais, Charge d'Affaires at

Managua, or to Rear Admiral Julian L. Latimer, commanding American naval forces in Central American waters.

Six or seven vessels are under Admiral Latimer's command, stationed at various ports in Nicaragua, Honduras and Guatemala, and presumably they are alert to the gun-running situation. If such action should be deemed warranted, they are in position to run down and capture any Mexican filibusters, and might have the co-operation of the Central American governments which have established embargoes.

While the filibustering activities and attendant developments have overshadowed the other elements of the relations between Mexico and the United States, they are not being overlooked. H. F. A. Schoenfeldt, Charge d'Affaires at Mexico City, has just been instructed to make representations to the Mexican Government looking to removal of agrarian trespassers on property owned by Mrs. Virginia King, an American.

De La Huerta Figures Doubtful
The statement at Los Angeles last night by Adolfo de la Huerta, formerly provisional President of Mexico, that 20,000 men were in arms in a general rebellious movement in Mexico, was received here with skepticism. In making his announcement, he took occasion to renew a charge of Bolshevistic tendencies in the Calles Government.

Mexico City was not the only Central American capital in which the Washington Government's recognition of President Diaz caused intense interest. San Jose, Costa Rica having found the news surprising with the Diario de Costa Rica suggesting that it represented a change in American policy. Nicaraguan Liberals there said the struggle against the Conservative Administration in their country would be continued, and that 5000 men were under arms.

Talk at Managua of an American loan, meanwhile, has evoked no confirmation among New York bankers who would be concerned, although they would not be surprised if President Diaz should seek \$200,000 or \$300,000 for immediate use and a larger amount later.

ENGINEERS FIND NEW SUBSTITUTE

(Continued from Page 1)

Greene of the Old Ben Coal Corporation, Chicago; Emil Piron, consulting engineer, New York; Robert M. Crawford, chemical engineer, Pittsburgh, and Dr. Walter Runge of the International Combustion Engineering Corporation, New York. Mr. Greene explained the operation of the new process, which consists of passing a thin stream of coal upward between two heated surfaces by means of a screw or rotor, turning slowly within a vertical suspended circular rotor. The rotor is externally heated, the rotor internally heated.

Emil H. Piron gave pertinent operating data from the two units for coal distillation, erected by the Ford Motor Company, and mentioned an

Only in this instance it was the elephant and the robin. The robin came to the zoo last spring, built the nest right in the corner of the elephant's home and stayed through until this fall. What's more, she raised her little family almost in Mr. Elephant's trunk.

Improved unit now being designed to be erected in Italy.

The McEwen-Runge process of low temperature distillation of coal as used in a plant in Milwaukee was described by Dr. Runge. The particular difference in this process, he said, is its system of heating, which consists of introducing hot gases into the retorts to effect the pre-treating and carbonization of the coal.

Coal Balls Mentioned

The unit consists of two retorts of steel shells. Its process aims not to produce a domestic or lump form of fuel, but rather a fuel the size of whose particles permit it to be used with little additional preparation in a pulverized coal burning plant. The capacity of the Milwaukee plant is 210 tons a day.

If the success of a process is measured by its ability to command capital for continued plant duplication, then at the moment no process for low temperature carbonization of coal has qualified. Clarence B. Wisner, of the Carbocite Company, Canton, Ohio, declared. He discussed the "missing link" in low temperature carbonization.

Through a dual or two-step process—thermoxidizing and carbonizing—his company has produced what he termed coal balls.

"It is a product with an exclusive individuality, smooth, irregularly shaped, of varied sizes and sizes, distinctly differentiated from one size artificial 'brquettes,'" he said. "We believe that domestic coal balls may be commercially made in practically all of the mining districts throughout the country. You will appreciate the superiority of these natural coal balls containing a uniform gas content which burns with a pleasing flame until entirely consumed—without smoke or odor and clean."

What directly will come from this conference will be the stimulation of study and research into coal and the chemistry of it, scientists at the closing session believed. The conference was called by Dr. Thomas S. Baker, president of Carnegie Institute of Technology, and natural scientists from all over the world have attended and spoken at the various meetings. Dr. Baker said he had no thought of striving for a foundation for Carnegie Tech, where research and study could be directed toward discoveries about coal.

ENGINEERS TO MEET
Boston Chapter, the Society of Industrial Engineers, will hear C. E. Knoepfel on the subject, "Staff Organization," at Northeastern University tonight. Supper will be at 6, the address following at 7:30.

Robin Fledglings and Elephant Become Friends at Bronx Zoo

Kartoum, Famous for Strength Rather Than Disposition,
Tamed by Birds "Who Had Faith" Before
They Wended Their Way to South's Sunny Skies

Special from Monitor Bureau

NEW YORK—Robin fledglings who helped to tame an elephant have left a trail of undiminished glory at the Bronx Park Zoo since they left there for the South and sunny skies.

Just how they won the elephant's friendship is not known. But the story of how they came boldly last summer to the habitat of Kartoum, the formidable, built their nest and reared their young in the corner of the fence surrounding his stronghold and remained in safety—has been the talk of the zoo ever since.

"Faith in Captivity"
The robins apparently were heedless of the fact that Kartoum had long been famous for his strength rather than for his disposition. Laudatory comments on his height and breadth have been frequently written, until now he is usually described as the tallest elephant in captivity. But of his nature and habits much less was said publicly.

It was, therefore, with some concern that the keepers of the zoo watched the progress of the tiny robins that were housed in the path of Kartoum's powerful trunk that had once swept so devastatingly over pillar and post that special fortifications had been built to restrain him. But their concern was causeless.

The robin fledglings slept, ate, and took their first timid flights under Kartoum's once fiery eye. From nestlings to sturdy young birds they grew with Kartoum as their friend.

They became known as the "robins that had faith."

Reared Young in Safety
"In the corner of this once shattered gate," the Zoological Bulletin says, "and in the presence of this annihilating power, they built their nest and reared their young in safety."

"With uncanny instinct they came to the nest and departed as often as the elephant turned away, while scores of times in their absence the elephant stretched his trunk over the nest, his softly inhaled breath quivering the downy feathers of the fledglings."

In every instance he turned away without molesting them. Eventually all the birds flew away. In exercising this strange control by what instinct was the elephant guided?"

He said he expects to present an ordinance that will require owners to have their dogs vaccinated against so-called rabies as a condition of licensing.

Mrs. Sue M. Farrell, president of the Vivisection Investigation League, said they would bring the subject up before their board of directors next week. She decried the proposal as "a real case of rabies occurs rarely, if at all."

"Those who handle dogs the most are the least afraid of them," she said. H. H. Wehringer, president of the New Jersey Vivisection Investigation League, who has been active for some time in opposing a similar proposition in New Jersey, declared he had been unable to find "any medical men of standing who have any faith in such a plan."

"The United States Department of Animal Industry," he said, "does not approve of the general application of inoculation. Opposition in New Jersey has kept the bill from being passed for four years. I hope there will be no such bill passed in New York and I don't think there will be. There are only three or four places now in New Jersey where the inoculation of dogs is compulsory and then in some cases they have option of inoculation or muzzling."

ITALIANS BEING INCITED TO SUBSCRIBE TO LOAN

By Wireless

ROME, Nov. 19—Public subscription to the Lictors Loans has been opened and according to reports received from all parts of Italy, a considerable amount of money has already been subscribed. The Government has issued a manifesto pointing out the advantages of the loan while large posters have been placed in prominent places reminding the citizens of their duty to give their share to aid the great battle in which Italy was engaged for economic freedom.

All the communes and other public bodies have already subscribed several million lire and the Fascist propaganda among the Black Shirts, inciting them to give an example to their fellow-countrymen in subscribing to the loan.

GARMENT WORKERS SIGN NEW CONTRACT

Special from Monitor Bureau

NEW YORK—The strike in the garment industry, which lasted for 20 weeks, has at last come to an end, with an overwhelming vote by the strikers to return to work. The vote for acceptance of the peace terms was 9945, against 2533 who voted to continue the strike.

The new contract will remain in effect until June, 1929. The recommendation of the Governor's commission to grant slightly higher wages is granted in the contract, but the manufacturers are allowed to reorganize their shops once a year with the right, where a certain number of workers are employed, to discharge 10 per cent of the working force.

But the diffusion of responsibility in Chicago's city government is only a fraction of the present difficulty, according to Mr. McClintock. With full appreciation of the excellent work that has been done by the park commission of Chicago, he said that the survey must point out that a most difficult condition is created by independent control of traffic within the city by a score of agencies in no manner responsible to the government of the city.

TASMANIA NOW FORGING AHEAD

Government Passes a Bill Through Parliament to Cut Taxation by £100,000

HOBART, Tas. (Special Correspondence)—While most of the Australian states are faced with increased taxation, the Labor Government of Tasmania, which last year budgeted for a deficiency of £100,000 produced instead a surplus of £23,000, and as a sequel to the improved outlook, it has just passed through Parliament a bill reducing taxation by £100,000. This is only the first instalment. It is intended next financial year to reduce taxation by a similar amount, the ultimate intention being to make Tasmania the lowest taxed State in the Commonwealth.

Experience has taught the Labor Party that high taxation is not a good thing for the progress of the State. Its theory that what is used to term the "capitalistic" companies and people of means should be heavily taxed like many other things, has proved that it will not work in practice, that it is a kind of two-edged sword and causes unemployment instead of giving employment.

Economic Survey
As the result of the representations put up to the Commonwealth Government, Tasmania has been given the first call on the economic survey of the Commonwealth. The survey, which is now making an economic survey of the state. This coupled with the organization of overseas marketing is expected to give a wonderful stimulus to the development of the island. There has been a notable improvement in the mining industry and for the first time dredgers are being employed inland on tin mining. This is in the southwest of Tasmania in uninhabited country, and the experiment is being made on a small scale. For the first time a mine with splendid steam coal is being opened up. All river steamers which formerly used New South Wales coal are now using the local

product with excellent results, and as soon as the coal is produced in sufficient quantity the railways also will be independent of imported coal.

In consequence of the severe motor competition with the state-owned railways, particularly for passengers, regulations have been passed which limit the motor coaches to a speed of 25 miles an hour. This gives them no advantage in speed over the railways which on a 3 ft. 6 in. gauge have a maximum speed of 45 miles per hour, and for that gauge are the fastest trains in the world. The grades are steep in places and the curves are sharp and abrupt. In addition the motorcoach proprietors have to pay heavy licenses.

The State also has been divided into five zones, and an extra license fee is required for each zone that the motor enters. In this way it has been made unprofitable for the motorcars to compete with the railways over certain sections.

American Tourists
Considerable interest has been caused by the announcement that the 20,000-ton Cunard liners Carinthia and Franconia are to visit Hobart early in the new year with American tourists on board, but there is keen disappointment that the arrangements do not permit the passengers to stay even one night in Tasmania, both vessels being scheduled to leave on the day of arrival. As Tasmania, with its rivers, lakes, mountains, fertile valleys, limestone caves of many miles magnitude, with its marvelous stalactites and stalagmites and subterranean rivers, is the wonderland of the Commonwealth, it is considered that the promoters of the trips are missing one of the attractions of the voyage in giving the tourists no time to look round.

Labor parties in Australia at least have always been the advocates of state enterprises, and in no state were there stronger advocates than in Tasmania. It was a Labor Government, however, that sold the state ships purchased by a Nationalist Government, and now it is selling the carbide works which came into its hands through the failure of the owner. The Labor Government has been successful in securing loans and power. These works are being sold to an English group for £140,000. Experience of office has shown the Labor Party many weaknesses in its hitherto advocated policy.

Wild Tribesmen Become Skilled Workmen at Katanga Mines, in Heart of Africa

Above—View of a Compound for Natives, Built of Sun-Dried Bricks, with Cement Floors and Grass Roofs.
Below—Women and Children Drawing Weekly Rations at Panda Compound of the Union Minière de Haut Katanga, in Belgian Congo.

year the authorities have to make a special decision when convening Parliament, for instance, or arranging the dates of holidays, fairs, and markets, or fixing summer time. Lastly, and this is perhaps the greatest drawback from a statistical point of view, no genuine statistical comparison between one year and another is possible, while the various subdivisions of the year itself—the half-years, quarters, and months—are likewise incapable of comparison.

In the opinion of the League's committee, "the attention of the public, on whose approval any reform of the calendar must depend, should be directed exclusively (in order that it may understand their respective advantages and disadvantages) to the fundamental principles of three main groups of reform."

Three First Quarters Equal
The first of these, which is the simplest, would equalize three of the four quarters. The first three quarters might consist of 30-30-31 days and the last quarter of 30-31-31 days (32 in leap year). Such leveling up would be of real advantage from the view of quarterly statistics, banking exchange transactions, banking accounts, and meteorological averages. Furthermore, calculations for finding the day of the week on which any given date falls would be considerably simplified. Thus, if Jan. 1 fell on a Sunday, Feb. 1 would be a Tuesday, March 1 a Thursday, and so on. This group interferes with a tradition less than any other. The question, however, is whether its advantages, which are considerably less than those of the other two groups of reform, are sufficient to justify the change.

The second and third main groups not only possess all the advantages of the first group in equalizing the divisions of the year, but, in addition, establish a perpetual calendar and completely remove the existing calendar. This result is obtained by making the extra day of the year (the 365th) a blank day, i.e., placing it outside the week, as, for instance, between Dec. 31 and Jan. 1. The introduction of the blank day, however, breaks the perpetuity of the cycle of weeks, and raises certain religious difficulties, mainly in Jewish circles.

Other Methods
The second group makes all the quarters equal with 30-30-31 days. The 365th day would be counted outside the week and might be called New Year's Day, preceding Jan. 1, while Leap-Year Day might precede July 1. Thus the quarters and half-years would be equal, and each month would contain the same number of working days; but the months would not be equal, nor would dates fall on the same day of the week each month, while the comparison of future dates or statistics with past dates would be less complicated than in the thirteen-month group, but more complicated than in the simple reform method.

The third group is one of radical reform. These systems would divide the year into 13 months of four weeks each, giving 364 days, to which would be added the extra day outside the week. This and Leap Year Day could be inserted as in the second group. Such a calendar would be a perpetual one, and days of the week would always fall on the same dates of the month. All the months would be equal, with the same number of weeks, working days, and Sundays.

The committee considers that the 13-month system is of greater utility for statistics and commerce, if the month rather than the quarter is to be taken as the unit of economic life. Otherwise the 12-month system is preferable. Probably few people know that the 13-month system is in partial use on British railways. A considerable number of employees are paid every 28 days, that is, by the lunar month instead of the calendar month.

WORLD MAY GET NEW CALENDAR

League Committee of 1924 Submits Report and Makes Proposals

Special from Monitor Bureau
LONDON—Should the calendar be reformed? If so, how should it be done? The second of these questions, at any rate, is answered in the report issued by the special committee appointed by the League of Nations in 1924. Schemes to the number of 185 have been sent in by 33 countries.

Of these, France provided 33, the United States 27, Germany 24, Great Britain 5, and other countries sent in various numbers. Detailed questionnaires were sent to the 56 states which are members of the League, and to religious authorities and business circles throughout the world. Replies were received, among others, from 27 governments, 26 international organizations, including the numerous national committees of the International Chamber of Commerce, 18 national railway administrations, and the educational authorities of 23 countries.

Owing to the fact that the present calendar changes from year to year, its exact reproduction only takes place once every 28 years. Hence the dates of periodical events can never be fixed with precision. Each

where, although the Chinese are eminently fitted to do this work, Dr. Washio believes that "Japanese have a quicker sense of adaptability, and are more alert and ambitious. In time also, Chinese can understand any other race, but Japanese have an advantage over them insofar as the development of the Japanese industrial system is in advance of that of the Chinese. In this respect, and so on. This group interferes with a tradition less than any other. The question, however, is whether its advantages, which are considerably less than those of the other two groups of reform, are sufficient to justify the change."

NEWSPAPER AMALGAMATIONS DISTURB PEOPLE OF BRITAIN
Movement Said to Portend Control of Public Opinion and Loss of Independent Views—Syndicates Called Bad for Journalists

Special from Monitor Bureau
LONDON—Concentration of British newspapers and weeklies into a few powerful hands goes on unchecked, and public opinion is fast becoming aroused to the situation. The few remaining independent papers, like the Manchester Guardian and the Nation, have described the logical consequences of this movement, but the consolidations continue to be announced every few weeks. A newspaper "trust" is not a thing that the average Englishman is disposed to look upon with equanimity. Ever since the acquisition by William Harrison and his associates in the Inverness Paper Company, Ltd., of the Illustrated London News, Sketch, Sphere, Tatler, Men's Weekly, Draper's Record, Graphic, and the Bystander. This places practically all the illustrated weeklies under one management.

A Market for Paper
An extraordinary meeting of the shareholders of the Inverness Paper Company, Ltd., was held recently, when Mr. Harrison, the chairman, informed his shareholders of the purchase of these periodicals and gave the reason for the purchase. After stating that the company had safeguarded its sources of raw material, Mr. Harrison spoke of measures taken to safeguard the market for its products. He said:

"Similarly, it was always in my mind that an indispensable adjunct to this policy was an assured market for a large output of our manufactured goods, also under our control. Therefore, we came to the conclusion some months ago that it would be a great advantage to your company and its associated mills if I could acquire for them a group of leading British illustrated papers and periodicals. This, as you know, has now been accomplished. . . . As a newspaper is of necessity something of a monopoly, and its first duty is to shun the temptations of a monopoly. Its primary office is the gathering of news. At the periphery of its soul it must see that the supply is not tainted. Neither in what it gives nor in what it does not give, nor in the mode of presentation, must the unclouded face of truth suffer wrong. Comment is free, but facts are sacred."

RUSSIAN FINDS CHINESE CITIES

Pictures of Hieroglyphics—Ancient Gobi Desert Road Is Discovered

MOSCOW (Special Correspondence)—The veteran Russian explorer of Mongolia and adjacent territories, Prof. Peter Kozlov, has just returned to Leningrad after an extended expedition which took him through hitherto untraversed wastes of the Gobi Desert. In the course of the trip he found that several oases which he had encountered on an earlier expedition in 1908 had disappeared in the constantly shifting sands.

The most interesting and striking discovery which Kozlov and his party made was a ruined Chinese town, Shua-Oay-Chien, which was erected in the thirteenth century by Kubla Khan. Only the walls of this town were left standing, along with a little stone building which stood in the center of the town and resembled a military post. Near by, on a rocky hill, the explorers found a polished stone monument between three and four feet high, which was covered with hieroglyphics. These were photographed and copied by the expedition. A rough translation of the inscription conveyed the information that the town was built more than six centuries ago as a Chinese military center.

Professor Kozlov revisited the buried Mongolian city Kara-Khoto, which he had discovered many years ago. Here he found interesting specimens of pottery and chinaware, together with a large head of Buddha, made out of some unknown clay substance. Crossing the desert, some members of the expedition found a thirteenth century road, used by the medieval "princes of Kara-Khoto" to drive their caravans to Peking. The road was built on a raised platform designed to protect it against the sands. Now it is almost entirely covered by the moving sands of the desert. But, in Professor Kozlov's opinion, it can easily be restored, thereby connecting the central part of the Gobi Desert with Peking.

On his return journey from Kara-Khoto to Urga, the capital of Mongolia, Professor Kozlov discovered in the Altai Mountains a beautiful and impressive mausoleum, which probably belonged to a Mongolian khan, and was erected in the tenth century. Traveling along the River Orkhon, the explorers found what is believed to be the only waterfall in Mongolia, a cascade which falls from a height of 80 feet near the source of the river. This cascade, it is suggested, might be usefully employed in initiating irrigation projects which would fertilize the Mongolian desert.

The ethnographic section of the expedition collected songs, tales and legends of the practically unknown Mongolian tribe of the Turgouts. Altogether the explorers brought back more than 3000 archaeological, geological and ethnographical specimens.

FLOATING ROADWAY OVER MERSEY OPENED
Special from Monitor Bureau
LONDON—A notable engineering undertaking reached a successful conclusion when the new floating roadway over the Mersey, constructed for the Wallasey Corporation, was recently opened for traffic. Costing, with its approaches and landing stages, some £180,000, the new roadway is 600 feet long and 56 feet wide.

The roadway is built up with five floating spans each supported on eight steel pontoons. When not working, the whole roadway is housed in a cut in the river wall. The capacity of this floating roadway is estimated up to 30 tons weight for any one vehicle. There will be a 24-hour service all day to 6 p. m., and half-hourly to 8 p. m., and charges vary according to the size of vehicle from 1s. 4d. to 2s. 6d.

LIVERPOOL HAS FINE ORGAN
LIVERPOOL (Special Correspondence)—The great organ of Liverpool Cathedral which was recently dedicated is said to be the finest in the world. It is probably the only one, too, which has its own private telephone system. This is to facilitate the tuning of the instrument, as it is so vast. No fewer than 17 telephones are installed so that the man at the keyboard can communicate easily with the tuners at work on the pipes in the outlying portions.

CONGO TRAINING NATIVE WORKER

Dearth of White Labor Necessitates Use of Black in Responsible Posts

Natives from some of the wild tribes of the jungles of Africa are becoming skilled workmen under the guidance of the Union Minière de Haut Katanga. Africa's famous copper mine—in the Belgian Congo, according to Dr. John M. Springer, Methodist missionary, who recently returned to the United States from that country, where he has spent the greater part of 25 years working among the natives of the mining district.

The Katanga mines, located almost in the heart of the African continent, contain the largest deposits of rich copper ore known in the world. Although now one of the largest producers of copper, only 12 of the 150 mines that the company has pegged out in this district have been opened up. To meet the demand for labor, the company is educating and training natives for responsible positions.

Hunters Become Artisans
Some of the most intelligent natives, men who not so many years ago were hunting for a living, are now employed as overseers, carpenters, bricklayers, clerks, time-keepers, telephone operators, and even locomotive engineers.

"Most of these native workers," said Dr. Springer, "come directly from the various African tribes. Some of them become steady workers, but many find the routine of mining camp too radical a change from their former mode of living and sooner or later drift out of the district. To train natives for more responsible positions, the company maintains a trade school. Instruction is also given in reading and simple arithmetic."

"When I left Africa natives were receiving about 45 francs a month, then equivalent to about \$2 in our money. At the present rate of 278 cents for the Belgian franc, their monthly wages would equal \$125. In addition to their wages, however, they are provided with houses and weekly rations for their families. While this seems like ridiculously small pay to us in America, in Africa it is considered reasonable pay for natives who otherwise might be living a precarious existence in the wild country. Every male native must pay a poll tax of about \$1 a year to the Belgian Government."

Housing Not Difficult
Housing the workers is not much of a problem, as the climate in this section is mild and does not run to extremes. Seldom does the thermometer get above 90 degrees or go below freezing. "The houses which the Union Minière builds for its workers are one-room affairs with cement floors, walls of sun-dried brick and thatched roofs," said Dr. Springer. "The company is now, however, building some new villages or compounds as they are called, which have houses of two rooms and a small kitchen and a hen house in the rear."

"Not only are the natives well fed at this corner Bookshop You Will Find Not Only Literature, American magazines and stationery, but on the first floor a very pleasant English Tea Room where light lunches are served from noon."

STUDENTS MAKE SCHOOLS CHEERY

Australians Organize Concerts and With Earnings Adorn Classrooms

ADELAIDE, S. Aust. (Special Correspondence)—It may be doubted whether there is anywhere an educational feature of more thrilling interest than that which enjoys immense public popularity in South Australia. It is known as the 1000-voice concert.

These entertainments are given under the auspices of the Public Schools' Floral and Decoration Society, which was founded in 1891 by J. A. Hartley, who conceived the idea of brightening the class rooms by organizing concerts to raise money for decorative purposes. The success of the movement was immediate and unprecedented. The number of concerts grew from one to four and this did not by any means exhaust the public demand for tickets.

The First Conductor
The first conductor was Alexander Clark, who trained the children for 23 years, and successive conductors have given proof of leadership and rare skill in knitting together, with massive effects of harmony, the voices of 1000 children. Pictures, pianos, lanterns and slides, stereoscopes, band instruments, library books, and so forth, have been secured, costing thousands of pounds.

In 1913 it was decided to devote the net proceeds of that year's concert to the foundation of a scholarship in musical studies. This is tenable at the Elder Conservatorium of Music and perpetuates the memory of the first conductor. The present leader holds the post of supervisor of music for the education department. Mr. Gratton is a most capable musician and he has developed among the 1000 boys and girls forming the choir a passion for unaccompanied part singing.

Boys Interested
The selected scholars in the various schools are trained there by the teachers, with the supervision of the conductor, who has the 1000 voices under him for only two or three rehearsals just prior to the concert being given. Mr. Gratton finds that boys' voices are an acquisition to the choir although more difficult to train than girls' voices at the same age. Many of the children who take part in these concerts are now given the opportunity to continue their training in choral singing at the metropolitan high schools, and later at the teachers' college under the direction of the supervisor.

By means of these concerts many of the city and suburban schools are attractively decorated, and all this has been done without the slightest aid from the Government. No subsidy or grant of any kind has either been sought or offered.

AUSTRALIA PLANS ROAD SYSTEM
SYDNEY, N. S. W. (Special Correspondence)—The Federal Government has proposed a scheme for co-operation with the various states in a road program, and undertook to find £20,000,000 for the work. Only three of the six states agreed to this road scheme, but the federal Treasurer persists. It will be proceeded with, and provision will be made for other states to come as they perceive the wisdom of doing so.

At This Corner Bookshop You Will Find Not Only Literature, American magazines and stationery, but on the first floor a very pleasant English Tea Room where light lunches are served from noon.

SPAIN TIGHTENS OVERSEAS BONDS

Tendency to Look Toward America Increases—Aid Is Sent to Cuba

MADRID (Special Correspondence)—The large Cuban colony resident in Madrid responded handsomely to an appeal made by their Ambassador, Señor Garcia Kohly, who is collecting funds for the alleviation of the distress consequent upon the recent "haster in Cuba. At a reception given at the Embassy recently a number of prominent people of Madrid society were present, and a total of 100,000 pesetas was collected, which is an unusually large amount for a local subscription. The Council of Ministers also decided to open a subscription for this purpose, contributing 250,000 pesetas.

It is interesting to note how the tendency to look toward America becomes stronger and stronger in Spain. One day a year is now set apart for the purpose of fomenting what is called the "spirit of the race." The date chosen is October 12, the anniversary of Columbus first sighting America being considered a most suitable day for holding "La Fiesta de la Raza." On this day the official ceremony takes place before the statue of Columbus, at the foot of which a wreath is laid by the representative of one of the American states.

This year the honor fell to Bolivia, and the ceremony was presided over by the Minister of Public Education. All the members of the Latin-American diplomatic corps were present, and speeches were made. The Minister of Bolivia said that the bonds between Spain and the countries who were once its colonies overseas were indissoluble, so much so that it was permissible to doubt whether the Spaniards had conquered America or whether the Americans had regained the affection of Spain had not achieved the conquest of the peninsula.

Over 30,000 children from 400 schools paraded before Columbus's statue, and the usual holiday was declared throughout Spain, not only for children but for Government officials, banks, etc. In the evening a gala performance was held at a theater at which members of the Latin-American colonies were present in large numbers, and special medals having been struck, the Minister of State presented them to the aviators who had recently crossed the Atlantic.

Similar festivals were held at Barcelona, San Sebastian and other Spanish cities, and at all of them the dominant note was the interest now felt by Spain in its relations with Latin America.

CONCRETE ROADS OVER BOGS
GLASGOW (Special Correspondence)—Concrete has been enlisted for the completion of the Scottish section of the Great North Road between Blair Atholl and Inverness. Twelve reinforced concrete bridges have to be built before the road is opened in the summer of 1927. This is all in the ordinary course of concrete work, but a unique use of it is being made to carry the road over the two great peat bogs between Tomich and Blair Atholl. This is being done by concrete rafts and over a mile has been covered by a huge slab of concrete, 7 inches thick and 21 feet wide.

In British Columbia The Vancouver Daily Province
is to be found in the great majority of homes and is welcomed by father, mother and children alike. "The Province aims to be an independent, clean newspaper for the home devoted to public service."

LIVERPOOL HAS FINE ORGAN
LIVERPOOL (Special Correspondence)—The great organ of Liverpool Cathedral which was recently dedicated is said to be the finest in the world. It is probably the only one, too, which has its own private telephone system. This is to facilitate the tuning of the instrument, as it is so vast. No fewer than 17 telephones are installed so that the man at the keyboard can communicate easily with the tuners at work on the pipes in the outlying portions.

FLOATING ROADWAY OVER MERSEY OPENED
Special from Monitor Bureau
LONDON—A notable engineering undertaking reached a successful conclusion when the new floating roadway over the Mersey, constructed for the Wallasey Corporation, was recently opened for traffic. Costing, with its approaches and landing stages, some £180,000, the new roadway is 600 feet long and 56 feet wide.

LIVERPOOL HAS FINE ORGAN
LIVERPOOL (Special Correspondence)—The great organ of Liverpool Cathedral which was recently dedicated is said to be the finest in the world. It is probably the only one, too, which has its own private telephone system. This is to facilitate the tuning of the instrument, as it is so vast. No fewer than 17 telephones are installed so that the man at the keyboard can communicate easily with the tuners at work on the pipes in the outlying portions.

Automobile Show at Olympia Beats All Records for Sales

In Spite of Industrial Depression in England Manufacturers Do Big Business

Special from Monitor Bureau
LONDON—All Britain, and the visitors from many outside countries as well, have been amazed at the twentieth annual automobile show which has just closed at Olympia. In the face of the greatest industrial crisis and depression since the war, the show has been a success in every way. Sales of cars have been made at any previous show. While no accurate figures as to sales can be cited, there is no doubt that all records were far surpassed. Before the show had been open four days, many car manufacturers with large car plants for turning out cars were unable to promise delivery before next April or May.

The industry may now be considered to be in an impregnable position for years to come. To this result continental and American competition has contributed no small degree by putting British manufacturers on their mettle. Thus, the adoption of the fabric covered body in France has made the production of saloon cars less expensive, by reducing the weight of the coach-work, an example to be followed of making the saloon the normal type of moderate-priced family car.

Six-Cylinder Cars at Low Price
Looked at from one point of view—and a very important one to the bulk of the motoring public—the 1927 models may best be described as offering six-cylinder luxury at four-cylinder prices. There are at least two thoroughly good six-cylinder cars to be obtained for less than \$300, and of the 29 new six-cylinder models no less than seven can be had for under \$400. And for less than \$500 an eight-cylinder car may be purchased.
This year, for the first time, the buyer with only \$100 to spend had

two cars to choose from—both British—one of them an eight horsepower, two- or four-seater, equipped with four-wheel brakes and dynamo lighting and electric starter. The buyer with \$150 in his pocket had 11 cars to choose from, while the man with \$200 was offered no less than 21 under that price, four of which were saloons. Anyone who was prepared to spend up to \$300 was bewildered by the choice before him—numbering as it does 52 different cars.

The \$100 Machine
This year's show also marked the appearance of the \$100 car, and of the 12-cylinder engine. Judging by the interest which the former attracted among dealers and agents a lively demand for it is expected. As to the 12-cylinder engine, this is a magnificent piece of work, which has developed 180 horsepower on the bench. The result is that the variation of speed on top gear is quite extraordinary, anything between 2 and 82 miles an hour being easily attained, while acceleration to 50 miles an hour is possible in four seconds. The engine is in reality a double six, the two units being set on a common crankcase at 60 degrees.

Considerable interest was also attracted by the appearance of the only British super-charged car. This is an 11 horsepower sports model—that is to say, the taxable power is 11, but 50 is the normal brake, and 65 the output with the booster.
The Olympia Show has now established itself firmly as a most important national festival of the year. On the opening day this year nearly 21,000 people paid for admission—an increase of 5000 over the total for the same day last year. On the second day, a Saturday, the attendance doubled, numbering 43,400, which is 15,000 more than on the corresponding day in 1925.

Ancient Rock Palace in Texas Recalls Court Life of Old World

Restoration of Crumbling Structure, Built by Spaniards in 1749, Proposed by Historical Societies as Meeting Place, and Memorial to State's Heroes

SAN ANTONIO, Tex. (Special Correspondence).—An ancient governor's palace, where the splendors of Old World court life once were set down upon a far western frontier of this New World, is threatened by the encroachments of progress.

The City of San Antonio has been requested by the Texas Historical and Landmarks Society and the Daughters of the Heroes of Texas to buy the crumbling rock palace, built by the Spanish Government and dedicated in 1749, according to inscription which appears with the Spanish coat of arms over its doorway.

The building, known as a capital by representatives of the Spanish crown when this was the seat of government of the Texas Province of "New Spain," is the last remaining relic of the Spanish rule in this territory. Other royal structures were destroyed by the Mexicans when they revolted and Mexico threw on the rocks of Spain.

Located in City's Center
Because of its historical interest, according to Miss Adina de Zavala, president of the petitioning organizations, it is desired to repair the old palace and to dedicate the rehabilitated structure to all the heroes of the Lone Star State. It could then be used for any patriotic purposes—but the main idea is first to provide for its preservation.

The property is situated on Military Plaza, only a few blocks from the center of San Antonio's business district. Although the palace in the rear of the palace is in disrepair, the three-foot main walls stand. It is

suggested that the walls be stuccoed, and a tile roof be added.
Aside from its international aspect, the old palace holds particular sentimental interest for Texans. Held by the Mexicans in 1835 when San Antonio was captured by the Texans, the former Spanish capital was the last Mexican stronghold to fall to the victors.

Met Three Governors There
Moses Austin, who came on his colonizing mission, paid his respects to Governor Martinez at the capital, was repulsed, but, calling again with proper introduction which was lacking on his first visit, arranged for a desired passport to Mexico.

A bit of dazzling, Old World court life amid surroundings in such sharp contrast that is the picture of the governor's palace contained in the diary of Lieut. Zebulon Pike, who met three governors at the palace in 1807 or 1808. They were Governors Cordero, Herrera and Salcedo. Pike, who, on a reconnoitering trip from the United States, strayed "accidentally on purpose" into this alien region, was impressed by the beauty of the women, the brilliance of their gowns and the courtliness of the men. The diary relates how the governor of the province during his visit which he held would step from the royal splendor of the palace to the near-by plaza and dance democratically with his people.

SUPERPOWER PLANS CITED

Industrial Possibilities in Midwest Outlined by Samuel Insull

Special from Monitor Bureau
CHICAGO, Nov. 19.—Superpower developments centering in Chicago, and their industrial possibilities, were sketched by Samuel Insull, public utility operator, at the first annual meeting of the Electric Association of Chicago.

He outlined an extensive system in construction over the region bounded by Milwaukee, Detroit, Cincinnati, and St. Louis. The intervening area, "to way nothing of territory reached by further connections to the east and south and west, will be covered by a network of secondary transmission and distribution lines," Mr. Insull reported.

"Imagine," he said, "the consequences of this development, the effect of it upon industry and trade and living conditions over a vast area; abundant and economical power for productive industry, transportation quickened and multiplied, more of the comforts and conveniences of electric service in the homes and on the farms."

Announcement of a policy adopted in conference with his operating and engineering associates was made by Mr. Insull. "The larger companies that supply energy directly to the Chicago district will not hereafter install any generating units of less than 50,000 kilowatts, or about 67,000 horsepower each. Units of larger capacity will be installed, of course, but nothing smaller."

Consequently nothing less than 50,000 kilowatt units will be installed in outlying stations at Waukegan, Joliet, Michigan City, Drexler, Ind., on the Wabash River near Terre Haute, and in the station to be built at Pekin, Ill. The significance of the program was explained by comparison. The stations named by Mr. Insull call for units at least two thirds greater in capacity than units thought to be large for a Chicago station only five years ago.

The electric generating capacity economically available to the Chicago district is today approximately 1,250,000 kilowatts, or more than 1,750,000 horsepower, comparable with the commercially available generating resources of the world's largest two electric districts; namely the aggregate capacity of all electricity supply companies in the Greater New York district and the aggregate Canadian and American capacity in the Niagara Falls district, including Buffalo.

The annual output of electricity per capita in the Chicago district—nearly 1000 kilowatt hours per capita per annum—is greater than anywhere else in the world, except on the Pacific coast and in the Niagara Falls district, where circumstances are unique, Mr. Insull reported. The average selling price of electricity to the final user is lower in the Chicago district, he stated, than it is in any other part of the United States, Niagara Falls again being an exception.

The capital investment of the electricity supply companies in the Chicago district has been practically doubled in 10 years, he remarked, while the telephone and the telegraph companies have a little more than doubled their capital investment here. The investment in electrical manufacturing is today practically about six times that of 10 years ago, he added.

CUBA LIMITS SUGAR CROP
HAVANA, Cuba (P).—Cuba's next sugar crop will not exceed 4,500,000 tons, a presidential decree announced. The advisory commission appointed by President Machado recommended that the crop be limited to not more than 4,500,000 tons. The decree also provides for commencement of actual cutting of cane on Jan. 1.

In the Lighter Vein

PERFECTLY SATISFACTORY
"Where's your license for driving a car?" asked the policeman. "Right here in my pocket." "Oh, that's all right, then, if you've got it. I don't need to bother to look at it. But if you didn't have one, I'd have to see it."

ALWAYS
"What's the new strike about?" "It's hard to tell, but we're in the right."

THE COINCIDENCE
"Where are you going?" a young woman asked a shipmate, the second day out. "Across the ocean," replied the other. "That's a coincidence! So am I."

LOST AND FOUND
A small boy was returning from school, crying bitterly. "What all you, my little fellow?" asked an old gentleman. "I've lost the p-penny the t-teacher gave for being the best boy in the class," sobbed the boy.

"Oh, well, never mind," replied the other, "there is another that will take its place. But tell me how you lost it?" "Cause I wasn't the best boy in the class," replied the boy.—*Lancashire Daily Post.*

ONE-HOLE GOLF
When asked how he made out on his day on the links, the beginner replied that he made it in 80.

"Eighty?" ejaculated his friend. "That's really remarkable. Most old-timers would envy you on that score. You'll surely be an enthusiast from now on."

"Yes," said the novice, considerably. "I'm going back tomorrow and try the second hole."—*Wall Street Journal.*

COLLEGE BRED
A Negro had for several years served faithfully as the caretaker of one of the dormitories at University of North Carolina. One day he came into the president's office, and presented his resignation.

Dr. Battle expressed some regret, saying that he disliked to lose him.

"Yess, suh," replied the Negro, "but you see, it's dis way, Mr. President. You know, I se a preacher, and de bishop at de las conference has done sent me down to Tarboro, N. C., 'cause he says dat charge needs a university man!"—*Charleston News and Courier.*

NO ROUND TRIPS
Diminutive financier (to companion standing in front of a merry-go-round): "No, sirree! Some of this round-trip business for me. When I spend my money I want to go someplace."

WORK TOGETHER, IS FARM SLOGAN

Co-operative Union Indorses Plan—Military Training in Schools Opposed

HOT SPRINGS, Ark., Nov. 19 (Special).—"Buy together, sell together, and vote together," was adopted as a national slogan by the Farmers' Educational and Co-operative Union at its convention here. This was incorporated in a program of topics dealing with the farmers' problems and interests designed to unify the policy of Farmer Union members throughout the country. No better ideal and statement of program can be conceived for the union than organization, education, and co-operation, the convention agreed on its closing day.

The delegates adopted the report of its banking committee, which recommended that members of the union from every state institute a plan similar to the one in use in Kansas where farmers have organized their own banks, the report declaring that "it is agreed by all of us that co-operative marketing is one of the main solutions of the farmers' problems and that no co-operative association can function without an adequate financial system."

Revelation of tariff schedules in the interest of agriculture, lower freight rates, repeal of the so-called guaranty clause in the Esch-Cummings law, abolition of military training in high schools and colleges and full control by the Government of the federal reserve system and the issuance of currency, were among the demands made by the union in the adoption of the joint report of its resolutions and legislative committees.

The convention indorsed farm relief measures to come before Congress which would place agriculture on a basis of equality with business and industry, properly financed with government loans with control to be vested in the farmers themselves, selection of board members to be made from bona fide co-operative associations within three years from time of organization.

The resolution condemning military training declared that members of the farmers union "are opposed to military training in our high schools and colleges and seriously object to the excessive expenses for maintenance of state military and citizens' training camps under the guise of education."

The convention also expressed approval of the stand taken by George W. Norris (R), Senator from Nebraska, in regard to the disposal of Muscle Shoals. It also went on record for establishing a special organization and educational fund to further the work of the union.

HAINES IS TOO MUCH FOR EDGE

Newcomer Loses in Short Order in U. S. Squash

Tennis Match

Special from Monitor Bureau

NEW YORK, Nov. 19.—Rowland B. Haines, champion of the Columbia University Club, made his first appearance yesterday in the United States fall squash tennis tournament at the New York Athletic Club, and smashed the hopes of C. M. Edge, the newcomer from the Annapolis Club, who had been announced as the new star in the game, in short order, the score being 15-3, 15-3. Edge, a powerful man, over six feet tall, with a strong service, but his lack of experience in the game made it easy for Haines to dispose of him by the use of the court craft of the ranking player.

E. R. Larigan, Class B champion of the Crescent Athletic Club, disposed of R. M. Kirkland, now a member of the New York Athletic Club, who was runner-up to him last year in the title tournament, with unusual ease, the score being 15-10, 15-3. Larigan has come along brilliantly under the coaching of James Reid, the Crescent coach, and will be dangerous in any company before the season ends.

All but one of the second round matches were completed yesterday, with the strong favorites, including Rand Jr., Harvard Club, and L. H. Sonnabend, Yale Club, set over until Sunday. Filmore V. S. Hyde, United States champion, was scheduled to play W. F. Y. S. Hyde, Harvard Club, by default.

A. W. Riley, Harvard Club, won from R. M. Hubbard, Harvard Club, by default.

R. E. Hughes, New York A. C., defeated R. B. Haines, O'Connor, Crescent A. C., 15-3, 15-10, 15-7.

G. O. Gorman, Yale Club, defeated E. L. Maxwell, Princeton Club, 15-13, 15-5.

W. M. Kienrich, Crescent A. C., defeated E. W. Richter, New York A. C., 15-5, 15-10.

R. M. Kirkland, New York A. C., defeated R. M. Kirkland, New York A. C., 15-10, 15-3.

Tennis Attracts Large Gathering

Biggest Audience to Witness Sport in Midland Sees Professionals Play

Special from Monitor Bureau

CHICAGO, Nov. 19.—Miss Suzanne Lenglen of France and the rest of C. Pyle's troupe of tennis professionals played before a crowd of 6,500, the largest gathering ever to witness a tennis event in the midland, at the Coleman here, last night. The introduction of the professional game, turned out in full force, some of them officiating for the first time.

As in all previous appearances on her "North American tour," Miss Lenglen defeated Miss Mary E. Browne of California, former United States women's champion, 7-5, 6-1, but not until Miss Browne won \$300 in bonuses, for showing against the world's champion. Miss Browne was promised a bonus of \$100 if she won four games in two sets and \$100 more for each game she won after that.

Miss Lenglen won the first four games straight before the French star got going. Vincent Richards defeated Harvey R. Snodgrass, 6-3, 6-1, in the men's singles contest. Snodgrass thereby being deprived of a \$100 bonus. In doubles, Richards and Paul Ferrel of France defeated the team of Howard O. Kinsey of California, 6-3, while Miss Lenglen and Richards in a mixed-doubles defeated Miss Browne and Snodgrass, 7-5, 6-3.

Miss Lenglen delighted the ladies with her wardrobe, wearing an old rose banyan and a pair of white stockings of the same color which she took off at intervals as the struggle grew warm. On her second appearance she wore a similar outfit of bright yellow.

Nicholas Altrock and Albert Schacht, famous baseball comedians, made a great hit with a sketch in which Schacht impersonated Miss Lenglen and Altrock impersonated himself. They played tennis with toy rackets and invariable balls, displaying strokes that even W. T. Tilden 2d never thought of, and ended with several strokes after the manner of slow motion pictures.

Women's Singles—Miss Suzanne Lenglen, France, defeated Miss M. K. Browne, California, 7-5, 6-1. Mixed Doubles—Miss Lenglen and Vincent Richards defeated Miss Browne and Harvey R. Snodgrass, 7-5, 6-3. Men's Singles—Vincent Richards defeated H. R. Snodgrass, 6-3, 6-1. Women's Doubles—Miss Lenglen and Paul Ferrel, France, defeated H. R. Snodgrass and H. O. Kinsey, California, 6-3, 6-1.

CONFIDENCE IN JONES SHOWN AT LAST RALLY

NEW HAVEN, Conn., Nov. 19.—(AP)—Confidence in T. A. D. Jones, Yale University coach, was the keynote of the final student football rally of the season, when Capt. Philip W. Bunnell, Reginald D. Root '26, and John M. Cates '06, paid tribute to the leadership the team has had this season, and expressed confidence in a future victory against the Crimson Saturday.

Capt. Jones was given an enthusiastic reception when he stepped on the platform to thank the team for the expression of the gratitude of the student body for its attitude toward an eleven that had worked hard but had not produced a victory. The criticism of the Yale coaching staff in the press.

Root, tackle on the 1924 and 1925 teams, and Cates, for three years, a Yale star end and at present director of athletics at Bowdoin College, were enthusiastically received.

HARVARD SQUAD LEAVES BOSTON

HARVARD's varsity football squad, consisting of 38 players, coaches, trainers, etc., left Boston this morning for New Haven, Conn., where they are to meet the Yale varsity in the annual football game in the Yale Bowl tomorrow afternoon. The players had dinner on the train and held a signal practice at the Yale Bowl this afternoon, after which they will spend the night at the Hotel Clark.

EASTERN LEAGUE TO MEET

PITTSBURGH, Mass., Nov. 19.—(AP)—J. H. Hays, president of the Eastern League, has issued a call for the annual meeting of the directors of the league to be held at Providence, R. I., on Dec. 1. There will be a luncheon at 12 o'clock and the business meeting will be called at 1. The election of president will be one of the chief items of business.

"Channel Swim" in Brooklyn Y. M. C. A.

By the Associated Press

New York, Nov. 19

SWIMMERS have only to drop in at the Brooklyn Y. M. C. A. pool for a "channel" jaunt if unfavorable weather or press of business prevents an attempt to master the storm-ridden water that separates England and France.

The "world's largest Y" covered 36 miles in the first day of competition in the "English Channel" swim, inaugurated as a substitute for the real thing, and to develop long distance swimmers. Each swimmer was to splash as long and as far as he desired with any stroke. The elapsed time is recorded daily and the contestants' positions each week. But you must get there inside of a month, or in 11 actual swimming hours.

The swimmers are not graded. The 67 swimmers yesterday swam a total of 2500 lengths of the 75-foot pool, averaging a half-mile each.

Philadelphia	0	12	0	6	32

MONTREAL, Nov. 19 (Special).—The Ottawa Senators, who led the National Hockey League race last week and then lost to Montreal in the playoff for the league title, made an interesting start here last night, when they defeated the Canadiens by 2 goals to 1 in a game which was marked by the fastest scoring in the history of the league.

It was not until within five seconds of the final bell that Leduc of Canadiens scored on a long shot from outside the net.

The Senators started their regular lineup of last season and the only newcomer to their ranks who played was Adam Smith, who was purchased from Toronto, who relieved Nighbor several times during the game.

The second period was the only goal of the first period near the end, going down after a rush by Moran and he cleverly evaded the Canadiens' defense to sweep the puck into the net.

The second period was scoreless although both goalkeepers, Cornell especially, were tested with hard shots from the outside. In the third period, G. Boucher broke away to center and the latter scored on a pass from Smith. Boucher was the only player who was not tested by the Canadiens' defense.

R. Smith was undoubtedly the star of the game and he gave the Canadiens' defense more work than the rest of his teammates combined. Boucher, in addition to combining for what proved to be the winning goal, gave Cornell great protection and in the second and third periods the Canadiens were almost a continuous series of attacks by the losers. The summary:

Team	W	L	T	Goals For	Goals Against
Boston	10	2	0	28	10
Montreal	9	3	0	24	12
Quebec	8	4	0	22	15
Ottawa	7	5	0	20	18

Philadelphia	0	12	0	6	32

WINDSOR, Ont., Nov. 19 (Special).—The Detroit Cougars received a 2-to-0 defeat at the hands of the Boston Bruins in the National Hockey League opener here last night. Better control, accuracy in shooting and the brilliant work of Stewart, Boston goalie, brought the invaders a well-earned victory.

Keats opened for Boston 25 minutes after a fine team rush, the former was the first to score, a veteran ace, passed from Oliver, beating Stuart, substitute for Goalie Holmes, from close in. Later Keats secured the puck from the defense and passed to Brien, who beat the Detroit goalie after 30 seconds of play.

For the remainder of the game the invaders used defensive tactics mainly and were content with one and two-man rushes. Detroit tried hard but was unable to break through the score-proof

THE HOME FORUM

The Mansion in the Moonlight

QUITE recently I went to sympathize with a neighbor whose home had suffered a few days before at the hands of a marauding band seeking not their own, and they had carried off a few of his choice personal treasures. As I went the shades of twilight were at their earliest gathering. I described my neighbor standing on the stone steps of his house, a veritable little mansion. He was surveying the scene about him, and evidently in deep reflection.

After a few words of greeting I said, "I have come to sympathize with you. There is little a person can do for another at such a time, but at least one may offer one's sympathy." "That is not inconsiderable," he replied, "in these degenerate days." The reply startled me not a little, for I was anticipating a very different reaction.

The more we talked the more it became clear to me that I was in excellent company. I was seeing my neighbor in a quite new light. I felt to admiring his house which I had not seen before at such close quarters; the lovely bricks so nicely mortared, the fine slate roof with so graceful a slope, the neat windows and exquisite sun parlor, the magnificent porch with its fluted columns and splendid granite base. His eye swept the parts as I dotted upon them, and then in one luminous glance momentarily apprehended the whole. As he held the mansion in his eye, so he held the mansion in his heart. He spoke, he suddenly said, interrogatively and imperatively:

"You've never seen inside? Come in."

He led me into the drawing-room where there were a thousand things to admire, yet nothing overdone. The fireplace, well, I could rave about the exquisite loveliness of the fireplace. Then we entered the native little den. "We all like this place," he said, "it is supposed to be my room, but you see marks of others' possession"; and he indicated significantly articles that by no stretch of the imagination could be regarded as belonging to the man of the house. Then he pointed to the floor.

"Do you see that?" he asked with a quaver of enthusiasm in his tone. "It took an expert over nine days to lay that floor. We don't do things that way today."

"I did see it. It looked like inlaid oak and was said to be an accurate variety of obtuse and acute angles, all matched in as though welded with a masonry hammer." "Our jerry building modernity," I said, "would build this in an hour and a half!"

"Yes, yes," he replied, "or else the fellow doing it would be fired for restricting output. The workers are supposed to be a bad lot these days, but I don't believe it. I confess to ignorance of most of the intricate details of modern industrialism, but I think human nature can be trusted to work out its finer side. Anyway, I do not want Utopia to come through the perfection of the worker when I am not perfect myself. Particular virtues are not peculiar to any class. Imperfections, alas, human nature does not class failings. What do you think of the modern situation?"

Household Arts, Crafts and Decoration

Clever Inventions by and for Women

Special Correspondence

AN EXTRA hand for the housewife to help her in cooking her vegetables while she attends to other duties is what a woman's clever little invention, called a "handee," claims to be. In appearance it is like a half-open flower made of tin, with a wooden handle taking the place of a stalk. It is placed over the greens in the water, and the steam escaping through slots in the "petals" prevents any boiling over. As it is flexible it fits pans of different sizes. This little gadget for greens has been used for a couple of years by the inventor in her own kitchen, and so many people who saw it said that they wanted one like it that asked where they could get it that finally she decided to patent it, and it was shown at a recent exhibition of inventions.

Another very clever invention is a tuck-away seat for a small kitchen or kitchenette. It has metal supports with a wooden seat and back and is attached to the leg of the table. When not in use the back folds over and the whole chair swings under the table. The single leg rises automatically so as not to tear the carpet.

New Comfort

Among the various notions for cooking is a kettle with a flat front on which it can be rested while the user is stirring starch, the lid, with a rustless hinge, being placed at the back to facilitate the filling of the kettle. There is also an aluminum saucepan which can be used on the top of an ordinary saucepan to form a double cooker.

A new design for silver and plated forks and spoons is so simple that one wonders that nobody thought of it before. The handles are ever so slightly bent over so that they cannot possibly slip into the plate. These are made in very good-looking old English and Heppelwhite patterns. This idea is also a woman's. Her husband has planned a variation in the shape of some little swallow-handled forks, for serving dices or preserved fruits, which also catch on the edge of the dish.

Inventions for the convenience and comfort of the reader included a pocket desk, a very simple, collapsible arrangement which is slung around the neck and forms a support on which a book can rest; and a very delightful combined book-marker and folding book-stand to prop the book up on a table. It is very light and can be carried on the book. The latter has been patented by a woman.

Home Convenience

A curtain hook that will neither rust nor come undone, letting the curtain fall in unobtrusive gaps like the ordinary safety pin with a hook on it, is the invention of a woman of title. It is very simple indeed and meets a great need. Another woman has planned a clothes line which has been used herself for some time. This can be attached to two or three hooks on the picture rail in a kitchen-dining room. When not in use the whole line is wound up within a neat little oblong case at the base of the wand which is used for lifting the line onto the hooks instead of having to mount a chair to reach up to them. The inventor said that she always hung her laundry up after supper, and took it down in the morning before breakfast. Indeed the quick fixing and removing of the line is a great attraction of this device.

Practical experience of living in circumscribed quarters prompted the invention of a wonderfully compact baby chair which need not be required for a small person can be used as an ordinary chair. It is in two divisions, one of which forms a bath-stand and the other a low chair for the mother to sit in. The latter can be transformed into a little padded play chair for the child and when mounted on the bath-stand the combination becomes a high chair.

For Craft Workers

Two of the remarkable inventions in the women's section have to do with needlework. One revolutionizes the possibilities of home knitting in several colors by means of some little gadgets for attaching to the thumb or first finger of the left hand. It was thought of by a woman to help her in the task of knitting a Fair Isle jumper for a six-foot son.

She worried of the task and almost decided to waste the two pounds of wool in which she had invested. And then she realized that she was not making full use of her hands, the left hand being employed only in holding the work. She therefore set about to design three little ivory attachments which have enabled her to develop a new and quick method of knitting of which the underlying basis is the fullest use of both hands.

The second device will be invaluable to the plain sewer, the dressmaker, and the woman who makes her own frocks. It is a simple aluminum holder that can be put onto any table for holding the work, thus doing away with the old unsatisfactory method of pinning it on the knees. The holder does not tear any fabric as the pin is apt to, and makes the work go much more speedily. A woman who is herself a professional needleworker and makes most beau-

Silver Dish Ornamented With Ivory by Erik Magnussen, Who Finds That the Perpendicular Line is Particularly at Home in the United States.

How to Make Papier-Mâché Articles

PAPIER-MÂCHÉ articles, such as rose bowls, fruit dishes, trays, and many other necessary and ornamental adjuncts to the home may be made very simply in the following way.

Choose a strong, solid table upon which to work and cover it with an old cloth. Then half fill with water a medium-sized basin. Obtain three old newspapers, the older and coarser the better, and tear them up into small pieces about two inches square. They should be as nearly the same size as possible. It is essential that they be torn and not cut. Drop the pieces of paper in the basin and leave them for an hour or so to soak. Meanwhile, in a smaller basin mix a smooth paste of a cupful of flour and water. Then add boiling water to the mixture until it reaches the consistency of ordinary cream. If a tablespoonful of alum is added the article when made is much more durable and will also be rendered in some measure fireproof.

Now select the china bowl or dish desired as a model and cover the inside with pieces of the torn paper. It is necessary that no inside part should remain uncovered. Avoid if possible any overlapping pieces of paper. Bits sticking up over the edge of the basin, however, do not matter. Press the paper hard and it will stick to the bowl or dish quite well.

Having completed this take a pastry brush or any brush of convenient size and cover the paper in the bowl with a layer of paste. This must not be too thickly applied, and care must be taken that no pieces of paper be removed from position. After this place in position another layer of paper—this time the paper

tiful things is the inventor of it. She has used it for several months and feels that she could not work without it now.

It was while sitting on the seashore in North Devon where, as she expressed it, "the scenery is so glorious and the rocks are so hard," that a woman thought of the idea of having air cushions fixed into detachable coat linings. These linings will go into any coat and as the air valves are in front the cushions may be inflated and deflated without removing the coat.

The pleasure of a country or seashore walk will be many times increased when most unpromising resting places can be turned into a comfortable seat by means of this cushioned coat, and as one cushion is fixed across the shoulders, even a tree trunk will no longer be an all-too-hard support. The linings are made either in light weight, but nice-looking materials, for quite a moderate price, or in rich brocades, and when the cushions are not in use the coat has an absolutely normal appearance.

A Danish Silversmith Interprets America

Chicago
Special Correspondence

LINES of the American skyscraper, simple, upward-reaching lines, have found their way into silverware, Erik Magnussen, Danish artist, who has come to live in the United States, is designing vases, cups, and other objects of silver in a new style which he calls an American inspiration, since he conceived it only after having viewed and studied the skyscrapers of New York. Silver which Mr. Magnussen has been exhibiting here depicts

A Danish Artist, Who is Designing for One of the Great American Silver Manufacturers.

strikingly from the usual period designs or copies of Old World art, and introduces the vertical line of tall, steel-structure buildings.

"An American style of silver should fit the modern American home," said Mr. Magnussen in an interview here. "Silver filled with ornaments copied from every style and mixed into no style has no place there."

Americans Need American Forms

The Danish craftsman, whose European work has been exhibited in the Salon d'Automne of Paris and the Danish Art Museum, is deeply interested in the problem of promoting a distinctively American style. American women and men appreciate truly artistic work, expressive of their own civilization, but the country lacks designers who can satisfy this demand, he declared. Too long have they been content to copy the designs of Old World craftsmen, he held, insisting that the time has come for genuine originality based on a sound knowledge of the rules of the craft.

The far simpler designs than European, said this exponent of Americanism in silver. His designs show a marked trend away from intricacy. Although the vertical line which he has introduced in all his work done on this side of the Atlantic is inspired by American architecture, he feels that it is not the most distinctive feature of his recent work. Tall buildings have had a more subtle influence than is seen in this obvious effect, he made his visitor realize. Since his sojourn in the canyons of New York, the artist has felt impelled to design more slender, upward-pointing forms. This to him means no departure from the exacting laws of proportion, but rather a new expression of them.

Try Cranberry Sauce
on
Vanilla Ice Cream

A tempting, new dessert that tastes as good as it looks. Make delicious Cranberry Sauce in 10 minutes by this recipe:

Ten-Minute Cranberry Sauce
1 pound (4 cups) cranberries, 2 cups boiling water, 1/2 to 2 cups sugar (3/4 to 1 pound). Boil sugar and water together for five minutes; skin; add the cranberries and boil without stirring (five minutes is usually sufficient) until all the skins are broken. Remove from the fire when the popping stops.

Trophy cups, long standardized in this country, need to be revolutionized, Erik Magnussen insisted. Highly polished cups engraved with the victor's record may serve as a shining testimony to achievement, but as a general rule, the typical loving cup is not welcomed by the victor's wife who has an eye for the beautiful in her home, he observed. Why not design trophy cups that Madame would be proud to place on her whitest linen, as a holder for flowers, perhaps? The engraving can well be placed on an ornamental base or on the bottom of the cup, keeping the

pendence on established patterns of the past.

It is not that the Danish artist would advocate ceasing to use period designs. Rather would he have them followed faithfully, if followed at all. To attempt to make new designs by a mere mixture of the old is to accomplish nothing, he said, depicting this tendency in furniture.

The exhibit of Mr. Magnussen's work here showed numerous examples of his new style. So satisfying are the lines that even the smallest pieces have interest and charm. A restrained use of ivory in combination with silver is another original touch in his work which shows a rare combination of faithful craftsmanship with free imagination. While some of his pieces are adorned with floral ornamentation, those the artist likes best himself rely upon graceful form alone for their appeal, keeping to the geometric line of the tall steel building.

Using Up Orange Peel

Orange peel should never be thrown away, for it has many uses. As a flavoring it may be used raw and finely shredded if care is taken that all the bitter white pith is removed.

For those who like just the merest taste of orange peel it may be used as a flavoring, by introducing it in thin strips into various dishes and removing the strips when the food is sufficiently flavored.

Dried in the oven, orange rind makes excellent fire-lighters. Children can get great amusement out of it by making orange peel candles. The fruit should be peeled thinly with a knife, making a start at the top, and continuing round till the peel is removed in one piece in the form of a spiral. If this is pulled out gently with the hands the curls will be very well marked. A number joined together make pretty candles with which a play-room can be decorated.

To make candied peel, the skins should be removed carefully in two pieces from top to bottom. Scrape away all the pulp and inner side of the rinds and place them in a strong solution of salt and water. Allow them to remain for a week, renewing the salt and water every other day. Drain and then boil them till they are quite soft. Let them drain again, and when dry, boil them in a sirup made by adding half a pound of granulated sugar to a pint of water. Continue to boil till the peel looks clear, which should be in about half an hour. Then make another sirup, only much thicker, using a pound of sugar to a gill of water. Place the peel in this and cook over a very low flame until the sirup candies in the saucepan. Place the peel on a sieve or wire rack, sprinkle with sugar, and place in a cool oven to dry. Store in an airtight tin.

WHOLESALE FURNITURE **WHOLESALE FLOOR COVERINGS**

Varied Modes in Mirrors

"MIRROR, mirror," hanging there, ran the old fairy tale. But today mirrors are placed, as well as hung, because their decorative as well as practical value is being fully appreciated.

For lighting a dark room, a mirror is especially charming; placed on a wall opposite a window it doubles the value of the window, so any north exposure can be made cheerful by this means. Spaciousness is likewise increased by this decoration and a sense of balance often achieved at the same time. A room scantily furnished appears more luxurious if a glass is placed or hung to reflect a pleasing part of it. Monotonous walls are relieved by the brilliance and talkativeness of a mirror.

The new fashion of an unframed mirror is a delightful one that fits into many wall spaces. It may be of the colonial or Venetian type as seems most harmonious with the other furnishings. The distinctive note is a clear glass with picturesque motifs hand-engraved in its surface. These decorations are usually applied to the top and bottom or the corners and frequently take the shape of a graceful scroll or flower motif.

Some mirrors are shield-shaped, others arch-topped, or rectangular. The arch-shaped mirror is especially fully with colonial furnishings such as a cabinet or quaint mirrorless dressing table or chest of drawers. Other shapes are the modern background for a console table in the hall or living room. Rectangular ones fit over mantelpiece or the dining room buffet where fruit, flowers and candlesticks can be attractively reflected.

In framed mirrors, wrought-iron, gold, walnut, and colors are seen. The wrought-iron frame is especially harmonious with Spanish period furnishings, while gilt ones can be used with either French Louis or colonial effects. The colonial gilt-framed mirror is simplest, while the French gold-framed mirror is usually an elaborate mirror that is decorative in a dainty drawing-room or the boudoir. Sometimes a pair of oval mirrors are placed side by side. The colonial mirrors on the other hand may have the quaint addition of a painting at each end of the mirror panel. Little landscapes or re-

productions of famous English artists' work such as "Innocence" fill end spaces. Hung over a colonial work table these fit admirably into narrow perpendicular wall spaces. Walnut frames match walnut furniture.

If color is needed the subtle polychromes or gay lacquers may be a clever choice. Rather narrow frames in dull silver or gold are effectively hung over chests of drawers or draped dressing tables. One lovely arrangement consisted of an oval gold-framed mirror hung against a drapery of flesh-colored georgette hung from the picture molding. To emphasize the beauty of the mirror still further, a lattice of roses was hand-painted on the georgette to "frame" the mirror. This effect could be carried out with cretonne.

The round table mirror is adaptable to just this use. And one seen in still another modern mode was tilted upright in a wrought-iron easel on a living room table! Here it reflected all the glow and color of a lamp and flowers.

Dutch Rolls

Take 1 quart of flour, make a hole in the middle, put in 1/2 cupful of yeast, then add 1 cupful of warm milk and 1 tablespoonful of melted butter, then 2 eggs well beaten. Stir them well together. Butter a long cake pan and pour the mixture in. Set it in a moderately warm place over night. In the morning turn the dough out bottom-side-up on a floured cake board. Cut the rolls off across the loaf (do not add any more flour or kneed them at all); put them in the tins intended for baking them. Let them stand a few minutes, then bake, and when they are taken out of the oven, brush them over with a little melted butter, so as to make the crust tender.

"Tramping" Seven
Seas, Destination,
Cargo Unknown"All Clear Aft!" Comforts
the Wanderer Whose Ties
Bind Him to the Sea

Thursday Island, Torres Straits

Special Correspondence

"HALF speed astern!" from the pilot, a wave of his hand to the puffing tug alongside, and our bow swings slowly out from the wharf, while the after lines tighten and strain. Presently we are headed downstream, the churning of the screw ceases, there is a shout from the stern and the familiar cry comes from the wharf, "all clear aft!" "Half ahead, sir!" requests the pilot of the third officer, in the stern formality of the bridge of a ship under way, and we are headed for sea once more.

"All clear aft!" What a significance for the sailor and the wanderer in that familiar call! It indicates the severance of the last tie to land ere setting forth on the long voyage, the definite abandonment of all shore considerations for those at the sea. It recalls many an embarkation, many a long-anticipated quest to far lands, strange ports and exotic seas. There is in it the very urge of adventure. It is a sort of epitome of the dreams and the yearnings of the sea-wanderer. It is a call to the very heart of the man who "tramps" the world across the seven seas! And as we set forth now we rub sides in passing with another world-roving "tramp" awaiting cargo at the same wharf. The bridges come abreast and the captain exchanges farewells. "Give my regards to N— if you find him in Hong Kong," asks one; and, "if you meet S— in Calcutta, tell him I saw me," reminds the other, while friendly hands are waved along the decks in the close-knit brotherhood of the sea.

At Flood Tide

The pilot scans the flags which are being run up on the signal mast at the harbor entrance. "Twenty-nine feet on the bar," he interprets, which is scant measure for a vessel drawing upward of 27, and laden with 9000 tons of coal. "Stand by your starboard anchor, sir," he calls the first officer on the forecastle head; for we may need it, and that quickly. The channel narrows as we pass slowly outward, past the town on the hillside, the passenger steamers at the railway wharves, the breakwater and finally the bluff on which stands the signal station. At flood tide, but there is a short two feet under our keel, and the pilot watches anxiously, scanning often his marks and ranges ashore.

The captain, relieved temporarily from command, stands imperturbably at the end of the bridge, his face grimly upon the open sea. "Starboard a little! Ease the helm!" orders the pilot, and the helmsman responds gutturally. "How does she head now?" "North, 34 east," is the sharp response. "Let her come to 32! Careful! Careful!" as the bow swings the merest trifle from mid-channel. "Port a bit! Steady! Helm amidships now! Full speed ahead, sir," to the waiting third officer with the hand on the engine-room indicator. And a jangling response from the regions below indicates the understanding and prompt obedience of the order. The bar is passed, we are clear, and at 10 knots, then 11 and 12, we head for the open sea. "North, 32 degrees west," and for the Orient!

"Tramping" the seven seas! There is a satisfaction in it that the voyager by "mail boat" never knows. There is the true companionship of the ocean, the feeling that one is a part of the ship's company, instead of a detached being in whom no one connected with the vessel has more than an economic interest, a mere payer of his way! And there is the poignant uncertainty of destination, the "waiting for orders" in this port or that, the restlessness of wondering where those orders will take one, whether to Buenos Aires or Vancouver, to Liverpool or Delagoa Bay or Papete.

On the Bridge

There is the interesting speculation as to what the cargo will be, whether coal to begrime the ship and penetrate to galley and saloon, sugar to exude a pungently agreeable odor abroad, or lumber to clutter the decks and tower high over the "midships-hulls." And there is food for many a conjecture in the possibility of meeting again in Cape Town or Calcutta the ships and acquaintances of whom we last took leave in Marseilles or Mobile. And upon the bridge of a tropic night there is talk of many things and places and experiences far without the landman's ken, sober wonder at the might and mystery of the sea, or lighter chat of remembered days in Yokohama or Port Said. Or of a Western Ocean morning when the weather is sufficiently described as "heavy," there is rough humor as one sits at meat at a heaving table and

juggles with dishes bent upon leap-

ing to the deck.

And there is companionship about

it all, the fraternalism of the true

rover, quite the brotherhood of the

sentry of the high road, who for-

gather of a summer evening about

the bush fire, and consider amicably

the dullness of ever staying in one

place. The spirit of the sea, withal,

does not abide on the "de luxe" liner.

Long since has it fled all such

formality and constraint. It is here,

on the "tramp," that it finds welcome

and sweet refuge, here among the

scent which, through calling or the

impulsion of the wanderlust, "tramp"

the world by sea.

Tramping

Along the watersides in Auckland

I wandered, some months ago, seek-

ing like the habits of the long

highway, a "lift" to somewhere, and

to nowhere in particular. There were

ships from many ports, from San

Francisco and from Valparaiso, from

the Seychelles Islands, in the middle

of the Indian Ocean, from London

"by the Horn," with eye practiced

from many such quests I scanned

them carefully, finally selecting a

trim vessel of clean lines, fresh

paintwork and generally efficient ap-

pearance. Up and down the wharf I

reconnoitered, noting under the

stern the simple information "Ter-

vek-Bergen." It was well! "This,"

I promised myself, "shall be my

abode for a period; and whether she

may be going I care not. For she is

a tramp and so, forsooth, am I!"

The captain was on board, and di-

rectly we met I knew that we were

to be shipmates for some time to

come. For I am versed in the breed

of the sea; and I felt that here, in-

deed, was one sympathetic to the

plight of the man "born with a taste

for travel," lacking the means and

the inclination for passenger liners.

That was six months past, and we

have sailed many thousands of miles

in many seas. And now we have left

the last outpost of Australia behind

us to seek the magic East, the Dutch

islands of Conrad, the sun-drenched

Philippines, and beyond. Where we

shall go afterwards is a pleasant

speculation, nor does it greatly mat-

ter. We are "tramps" and content,

our faces ever set toward

the old trail, our own trail, the out-

trail . . . the trail that is always

new!"

M. T. G.

CANADA IS EXPECTING
BIG FLOW OF SETTLERS

WINNIPEG, Man. (Special Correspondence)—Canada expects an influx of immigrants in 1927 that will reach the 200,000 mark, if negotiations now proceeding are concluded satisfactorily, stated Col. J. S. Dennis, chief commissioner of the Department of Colonization and Development of the Canadian Pacific Railway. This year the department was influential in bringing to Canada practically 100,000 new settlers, as compared with only 84,000 in the preceding year.

Colonel Dennis said that he hoped arrangements would be made once more for offering an attractive reduced rate to Canada for European immigrants. This would be one of the important factors in stimulating the movement of immigrants to the Dominion, and another is the increased interest which is being aroused in the Dominion among prospective British immigrants. There were also under way other plans for inducing people from other northern European countries to settle in the Dominion, Colonel Dennis said.

Faster California Service

Sixty-three-hour schedules between
Chicago and California points went
into effect a few days ago when the
fleet of new, fast trains left Chicago
by the several routes which have ex-
pedited their trains.

On the Overland route—Chicago &
North Western—Union Pacific—Southern
Pacific—the San Francisco Overland,
leaving Chicago at 8:10 p. m., will
reach San Francisco at 9:10 a. m. the
following morning. The Los Angeles
Express, leaving Chicago at 8:10 p. m.,
will reach San Francisco at 9:10 a. m. the
following morning. The San Francisco
Express, leaving Chicago at 8:10 p. m.,
will reach San Francisco at 9:10 a. m. the
following morning. The San Francisco
Express, leaving Chicago at 8:10 p. m.,
will reach San Francisco at 9:10 a. m. the
following morning.

By the Rock Island-Southern Pacific
route through El Paso, the Golden
State Limited likewise will operate on
a 63-hour time to Los Angeles. Trains
which heretofore have run on a 72-
hour schedule will make the run in 63
hours, among these being the Pacific
Limited, leaving Chicago on the Chi-
cago, Milwaukee & St. Paul, and be-
yond Omaha operating via the Union
Pacific and Southern Pacific.

The Santa Fe has established a new
62-hour train named The Chief be-
tween Chicago and Los Angeles, the
California Limited continuing on its
63-hour schedule. The faster train
will charge an extra \$10 fare. In all
instances the same relative schedules
eastbound prevail.

Carrying the Mails

The Chicago-Omaha trains of the
Chicago, Burlington & Quincy have
carried the United States mails for
more than 40 years. In the '90s this
mail contract was challenged by a
competing road, which sent its trains
against those of the Burlington in a
nightly race across Illinois and Iowa.
The trains of the other line were empty
but the purpose was to prove its ability
to match the Burlington in speed and
improper adjustment in the air brake
cock might be inadvertently closed,
removing the possibility of air brakes
becoming inoperative at a crucial mo-
ment.

The locomotive driver may now op-
erate his train, it was said, with the
definite knowledge that no defect or
improper adjustment in the air brake
apparatus can occur without his
knowledge or immediate warning.

The elimination of the angle cocks
is made possible by the adoption of
large capacity air pumps with which
all Pennsylvania locomotives are now
equipped. The purpose of the angle
cock on each car was to make it pos-
sible to seal the air in the train line
and thus conserve it for use when the
car was cut out of the train for switch-
ing.

The use of the large capacity air
pumps on the locomotive now makes it
possible to restore the air pressure to
the proper degree without delay
throughout the entire length of the
train. Also the possibility that an angle
cock might be inadvertently closed,
thus rendering the air brakes inopera-
tive, is now removed.

Seaboard Air Line winter schedules
have been announced and the Orange
Blossom Special is to commence opera-
tion with departure from New York

Encouraging Co-operation

Boston & Maine Railroad engineers
and firemen are offered trips to Chi-
cago at the expense of the road and
without loss of wages, in a competi-
tion to be held on suggestions along the
Van Sweringen and their bankers
work without any publicity makes it
impossible to obtain confirmation or
denial of such reports.

Attention also has been called re-
cently to the merger of the three Hill
roads, the Northern Pacific, Great
Northern and Chicago, Burlington &
Quincy. That such a merger was
favored by these carriers has been
known for years, the records of the
Interstate Commerce Commission's
consolidation proceedings containing
statements to this effect. Those in
control of the three properties have
always frankly admitted they sought
permission to make such a merger,
although admitting that this would
be impossible under the existing laws.

CHICAGO

Quiet...
... Refined
Your type of
Hotel Home

Sovereign accommodations offer luxurious quiet and refined elegance. Over-
looking Lake Michigan, in a neighborhood of fine homes, with Churches
of Christ, Scientist, nearby. An unexcelled cuisine with a carte or table
d'hôte service, and many unusual features, such as the Swimming Pool
(free to resident guests), luxurious Turkish Baths for ladies exclusively, and
other attractions add to your happiness here. Two-room suites, some with
dining room and kitchen, \$150 per month up. Single rooms \$90 per month
and up. Daily rate \$4 and up for single rooms. With twin beds, \$5 and up.

For a stay of a day... or a home for the year...

Hotel Sovereign offers more than any other hotel

Hotel Sovereign

Miami

It's June Here Now!

Another "season" has already started in this tropical vacation land. The customary early arrivals are here and are finding Miami the same enjoyable pleasurable spot of former years. Their comfort and convenience, in housing or in play, show no effect of the September storm.

Miami is ready, as usual, to entertain in the manner that has won this city renown as the "World's Greatest Winter Resort." Within the year a quarter of a billion dollars has been spent in building, enlarging, extending, making Miami a greater city; adding to its attractiveness, increasing its utilities, providing more accommodations, creating new sources of entertainment or making more easily enjoyed those features which have made this city famous.

Every summertime sport is available here throughout the winter—surf bathing, in a sea warmed by the Gulf Stream—golf on eleven sporty courses—polo on four palm-bordered fields—tennis, on fifty fine courts—motoring over 1200 miles of dustless highways—fishing—boating over multi-hued waters.

In addition there is the fast Spanish game of *Jai Alai* all the season. Dancing in scores of ball rooms, supper clubs, gay casinos, and pavilions of oriental splendor.

FRYOR'S BAND—Free Daily Concerts in Open Air Royal Palm Park

HOTEL RATES—\$5.00 rooms
Single \$2.50, \$3.00 per day
Double \$4.00, \$5.00, \$12.00 per day
Many rooms at lower prices.
These rates guaranteed by Greater Miami Hotel Association.

APARTMENTS—For 6 mos. season, 1000 sq. ft. (two persons) at \$500 to \$750 under average \$1.50 per day or less per person.

2000 sq. ft. (two persons) at \$500 to \$750 under average \$1.50 per day or less per person.

3000 sq. ft. (two persons) at \$500 to \$750 under average \$1.50 per day or less per person.

Several thousand de luxe \$1000 to \$2000

These rates guaranteed by Greater Miami Apartment Association.

*A unit is one room, kitchenette and bath, on two or more floors for housekeeping.

One hundred and thirty-five modern hotels, 1200 apartment houses, hundreds of cottages. Standardized rates.

Millions of dollars have been spent this summer in improved motor highways throughout Florida and the South to make your trip to Miami easy.

Direct de luxe trains to Miami from New York, Chicago, Detroit. Through Pullman from all principal northern cities, speedy ocean voyage up the coast. Complete traveling service in the world direct from New York and Baltimore.

This advertisement authorized by City Commissioners of Miami.

A New England Summer in a Tropical Setting

LAKEVIEW INN is a "home town," a bit of New England in Summer, set down amidst the year-round verdure of Florida's west coast.

Warm, sunny days in cool, sleep-inducing nights. Outdoor recreations, bathing, fishing in lake and stream, golf, tennis, roque.

Winter time is play time at Lakeland, and the quiet, home-like surroundings of Lakeland's modestly priced hotels attract the visitor who seeks a winter's rest and escape from winter's cold.

Come to Lakeland this winter. Write to the Chamber of Commerce for particulars.

Lakeland
Chamber of Commerce

436 Massachusetts Avenue
LAKEVIEW INN, FLORIDA

Rare enjoyments await you in this great natural playground of hills, lakes and forests—"The Solid Central Section of Florida." Here you may hunt, fish, swim, motor, golf—year-round, where Nature lavishes "growing days" with an unstinting hand.

Mildness of climate and beauty of environment are perpetual attractions. A fertile soil yields 2 to 3 crops annually on the same land, and fruits, vegetables, poultry and dairy products afford excellent prices.

Such attractions as these brought to Central Florida an ambitious, enterprising citizen, we invite you to come, as we did, to this land of agricultural richness, progressive cities, and permanent stability—where enjoyment in work or play awaits you.

Interesting literature will be sent on request addressed to any of the following Chambers of Commerce.

SUGAR SHARES
HAVE SPIRIT IN
STOCK MARKETVarious Specialties Move
Upward at Brisk Rate—
Some Weak Spots

NEW YORK, Nov. 19.—Price movements featured uniformity in opening of today's stock market, with opposing speculative forces again engaged in a struggle for control.

Sugars moved up in response to the further restriction in the Cuban crop, and textiles continued to reflect the improvement in that industry. American declines of a point or two were recorded by Case Threshing Machine and a few specialties.

Brisk buying of the sugar shares featured the early dealings, nearly a dozen issues in that group advancing a point or two before the end of the first half-hour.

The market jumped 4 1/2 points to a new 1926 high at 119. Federal Light & Traction, Air Reduction and Woolworth quickly advanced 2 or more points after yesterday's final quotations, while Baldwin, Radio Corporation, Mack Trucks, Timken Roller Bearing and Allied Chemical were among the many issues to move up a point or more.

International Agricultural Chemical preferred broke 1/2 point, and Fidelity Phenix Insurance 1/4 while Paige Detroit sank to a new low level for the year.

Market Is Active

The marked improvement in the situation, revealed in the weekly Federal Reserve Bank statements, had a bullish effect on speculative sentiment.

Another sharp jump of more than 6 points in French francs, which sold above 3 1/2 cents for the first time since last April, stimulated foreign exchange market. Demand sterling was 1/4 of a cent lower at 44.85, or close to the "gold standard" level, while the krona broke 10 points to 25.70, but other rates showed little change.

Expanded buying featured the trading in the sugar shares, with the demand for Baldwin on an exceptional scale. That stock rose to 141, a new high figure for the year, with the rise assigned to the immense volume of orders in sight, and the ability to control the small floating supply of the stock.

Purchases of St. Paul were also unusually large, the preferred shares rising more than two points. The proposed additional dividend of 10 cents on the outstanding common stock of the Standard Oil of New Jersey, under the new financing plan, caused heavy selling, which carried the price down to 59, a new low price for the year.

Case Threshing Machine was also liquidated again, freely breaking almost five points.

The renewal rate on call loans was unchanged at 4 1/2 per cent.

Bonds Market Steady

The bond market moved slowly ahead in today's trading, undisturbed by occasional flurries of profit-taking. Early dealings failed to develop any sustained buying, while although fairly large buying orders were executed for various foreign, railroad, sugar and local traction issues.

The market still awaited details of the new Standard Oil debenture issue, which were due to be published today, but trading continued in the bonds on a "when issued" basis at a substantial premium above par. With the preferred stockholders certain to reap the most of the issue, the prospective nominal offering ceased to be of much importance as a market factor.

Activity in New York City Transit bonds followed the announcement that attempts would be made to reach an early agreement on a policy of bus franchises. The A. J. C. City Transit is jumped more than a point to 60, and Interborough lens also headed upward. Liquidation of the convertible bonds was continued in large blocks around the year's high price above 105.

Belgian obligations hovered slightly below yesterday's high record, while French, Italian and German issues were firm.

WHEAT, CORN AND
OATS ALL SELL
OFF IN CHICAGO

CHICAGO, Nov. 19.—Wheat prices turned downward today after firmness at the start. Reports of favorable clearing weather in Argentina exercised a bullish influence on the market, but the effect of Liverpool quotations higher than due.

Opening at 1/2 off to 3/4 off, the Chicago wheat market was active, with all around setback to well below yesterday's finish. Corn and oats reacted with wheat, corn starting 1/4 off, but sugar and soybean prices were firm.

Provisions were strong.

Openings prices today were: Wheat—Dec. 1.35 1/4, May 1.33 1/4, July 1.33 1/4. Corn—Dec. 71 1/2, May 71 1/2, July 71 1/2. Oats—Dec. 42, May 42 1/2.

PEPPERELL MAY BUY
MASS. COTTON MILLS

A special meeting of Pepperell Manufacturing Company stockholders has been called for Nov. 30 to see if stockholders will consent to the issue of \$2,250,000 of 10 per cent. stock and authorize the disposal of \$1,250,000 of these shares to Massachusetts Cotton Mills in exchange for the capital stock of a new corporation which will have acquired the property and business of Massachusetts Cotton Mills.

In effect this is an exchange of the Pepperell Manufacturing Company stock for five shares of Pepperell Manufacturing Company. The terms proposed have been accepted by the directors of the former company and trustees of the latter.

AMERICAN SEATING PAYS EXTRA

American Seating Corporation declared an extra dividend of \$1.00 per share, or 75 cents on the common. Previously \$1.00 per share was paid on the common. The extra dividend is payable in quarterly amounts of 25 cents on the common, beginning Jan. 1, 1927, to stock of record Dec. 20, 1926, and Jan. 1, 1927, to stock of record Dec. 20, 1927, and so on.

SOUTHERN CALIFORNIA GAS

SAN FRANCISCO, Nov. 19.—Southern California Gas Company has applied to the Railroad Commission for authority to split \$100,000 of 10 per cent. common into 200,000 shares of \$100 par value common and 200,000 shares of \$100 par value preferred.

Stockholders of Tremont & Suffolk Mills at special meeting voted to give the treasury authority to accept offer of the Railroad Commission to purchase the plant and assets of Tremont & Suffolk Mills with the exception of cash and receivables. Full details have not yet been worked out but the plan is to acquire the plant and assets in one to five-year notes for \$1,000,000 and a sum to be fixed later for the plant and assets.

WAVE JUMPERS

SPOIL RECEPTION

Three Changes Cut Out 22 Stations for One Fan

WASHINGTON, Oct. 11—The wave jumping situation is again coming to the attention of the radio officials of the Department of Commerce. A communication has just been received from a radio fan in the middle West stating that because of the wave jumping of three radio-casting stations 22 stations have been practically cut out of reception.

The wave jumping department officials will not make public, is six tubes and has always given the very best satisfaction, having picked up the communication says, more than 100 stations in the United States, as well as Canadian and some foreign stations. The change of one wave-length alone cut this set from getting clear signals from 11 stations.

Officials of the department are concerned over the situation but they are of the opinion that as the fans begin to listen in during this autumn, the wave jumping will be found this condition to prevail more and more. The department is helpless in the matter, however, because of the recent court decisions and nothing can now be done until further legislation is passed by Congress.

THE CHRISTIAN SCIENCE MONITOR

BOSTON, FRIDAY, NOVEMBER 19, 1926

"First the blade, then the ear, then the full grain in the ear"

PUBLISHED BY THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

EDITORIALS

Senator Borah's appeal, made in a speech at Washington, for the maintenance of strict justice toward the people of China, and his warning to the powers against any imperialistic attitude toward that sorely distressed nation, are quite characteristic of the man, and are full of truths which it were well for the more powerful nations of the world to heed.

China and the Powers

China today, so far as its Government is concerned, is in an absolutely chaotic condition. If the other nations of the world sought to become imperialistic, as Senator Borah apprehends, they do not know to whom in China they could present their demands nor against what power they could launch an ultimatum, with any certainty of reaching a point of final authority. Three or four military chieftains are struggling by force of arms to secure control. Often when one succeeds in a certain district, his lieutenant revolts against him and another warlord is added to the list. Practically the only places in which life and property, even Chinese life and property, are safe are in the treaty ports under the authority of the various nations whose retirement from China is now demanded by alleged spokesmen of the Chinese people.

In a certain sense China today resembles Europe just as the latter country was emerging from medievalism. Its people have no central and final authority to look to for their protection or direction. But in innumerable groups they render allegiance to local chieftains, who in turn give fealty to others higher up. The great mass of the people are wearily and industriously toiling to keep themselves alive, indifferent in the main to the quarrels of the tuchuns, except as the agents of these potentates descend upon them with demands for service or for loot. Europe worked itself out of medieval conditions by centuries of slow upward striving. There were then no exterior forces which could attempt to hasten the solution of the European problem either by intervention or by moral influence. But the question must occur to every observant thinker, whether twentieth century civilization cannot cope with such anarchy in a single country more effectively than it was dealt with in the dark ages.

Justice to China is what all right-thinking people will desire, but whether it is justice for those having possible healing methods at their command to permit the frightful epidemic of oppression and outlawry to go unchecked may well be questioned. Abstract justice perhaps would suggest that the neighbors permit the members of an intemperate family to fight out their own quarrels, even though they end by the firing of the house and the destruction of its inmates, but modern civilization rather demands that the police should be summoned.

It may be admitted that Europe has in the past extorted from China many concessions which she been less philosophically indifferent to the things which Western civilization values, and had she developed her military power as has, for example, Japan. But when complaint is made that the best ports of China are controlled by foreigners, it seems fair to ask what was the condition of those ports when thus taken over, and how great has been the expenditure of treasure and of effort on the part of the treaty powers in bringing them to their present position. It is claimed that great numbers of Chinese live in the treaty ports, free from the authority of their own Government, but let us not forget that they sought this refuge in order to be assured of peace and protection, and that the authority of their own Government is at the present moment inadequate to maintain peace and order in the territories which are Chinese wholly. It is complained that the Chinese are not permitted either to fix the amount of their customs duties or to administer them. It would be difficult at the present moment to select an authority in China capable of either administering the customs or of expending the receipts therefrom if the powers should relinquish the task.

The problem of China is not to be settled by quoting political shibboleths like "local self-government," or "self-determination," or "imperialism." Neither, in our judgment, is it going to be settled by that armed intervention which Senator Borah seems to fear, but which we have never heard urged. Nor will it be hastened by the surrender of such footholds as Western civilization already has in Chinese territory. Rather it is likely to be advanced by the example which those outposts furnish of good government, and protection of life and property. While the plea for justice and fair play to the Chinese is worthy of respectful attention and applause, it is well to remark that the solution of the problem necessarily involves methods as yet untested. It would be simple enough for the powers to maintain their treaty ports, draw a wall of nonintercourse around China as a whole, and let the rival military chieftains fight out their quarrel to the point of extermination, but it would be a melancholy confession of the impotence of our modern civilization. It would be a sorry evidence of the failure of Christianity to attain its highest influence if the civilized world could bring to bear no more helpful an attitude than this.

The great and increasing burden of state and municipal taxation throughout the United States has produced, along with vigorous protests against governmental extravagance, various suggestions for raising additional revenues to meet current expenditures and the interest charges on bonded indebtedness.

Among these proposals for new forms of taxation are excise taxes—such as those levied on

gasoline by many of the states and on coal by the State of Pennsylvania—and those levied for the more effective taxing of what is usually termed "intangible property." This latter tax is particularly favored by the farmers and suburban home owners, who complain that in most states this kind of property very largely escapes taxation, and who reason that real estate therefore pays an unduly high percentage of the public revenues.

The problem of a fair and workable system of taxation, that will produce the required revenue with the least possible injury to productive industry and commerce, has been before the American people for many years without, it must be admitted, a solution being reached that public sentiment is inclined to accept. Starting from the fundamental that all kinds of property should be equally taxed, there arises at once the question of the effects of taxes on different classes of property. There is further a question whether in the true sense of the word "property," much of what is commonly described by that term comes within its accepted meaning. An illustration is found in the great volume of mortgages on real estate held by investors. Are these mortgages, or bonds issued against them, really property? According to the statutes they are, yet as a matter of exact fact they are simply titles to property, and if taxed, the same piece of real estate is subjected to double taxation. If a building financed by a bond issue is taxed at approximately its value as real estate, and the bonds are taxed also as intangible property, it follows that the building and land are in effect taxed twice. Such a situation would seem to be inconsistent with the fundamental of equality of taxation for all property owners.

Another aspect of the tax on personal property that deserves careful consideration is its effect on interest rates and investment of capital. If the taxation of titles to property becomes general, the income of its owners will be to that extent decreased, and there will be a general demand for higher rates of interest. This condition will operate to check investment, and it may be that the loss through higher interest charges will more than balance the benefits of increased revenues.

It is reassuring, as the results of the recent state and congressional elections are analyzed in the light of the tabulated figures and compared in their relative importance, to observe how complete has been the failure of the effort of the enemies of prohibition to dignify as a political issue the un-

Lest We Forget

worthy cause which they have espoused. The people of America are still able to remember that no political party, as such, lent more than passive aid to the moral campaign which resulted in the writing of the Eighteenth Amendment into the Constitution. They are confident now, apparently, that no political party or faction will be able, even by a resort to the subtle artifices and subterfuges of practical politicians, or by an appeal to the ignorance or prejudice of the voters, individually or collectively, to insert in a national party platform an unequivocal demand for the repeal or modification of the prohibition amendment.

Before the date of the next presidential election, now two years hence, more than eight years will have elapsed since the door of the last legalized saloon in all the United States was closed. Among those who will cast their ballots at that election will be several millions of young men and women, then voting for the first time, who were barely in their teens when this emancipation was effected. It would be vain for any candidate for the highest office within the gift of the American people, or for any political party, to attempt to convince these first voters that the continued enjoyment of personal liberty could be assured only by restoring the saloon to its lost status. But despite this, it is becoming more and more apparent that it is the intention of those who have undertaken to accomplish this very thing to bend every effort in the direction of aligning one or the other of the major political parties on the side of nullification or modification.

In discussing the significance of the defeat of Senator Wadsworth of New York, recently, Samuel S. Koenig, president of the New York County Republican Committee, is quoted as having declared that with that defeat the wet cause in the United States also went down in defeat. It is his expressed opinion, according to his reported statement, that with the failure of Senator Wadsworth to overcome the opposition of the Anti-Saloon League all possibility of congressional action to modify the Volstead Law vanished. "If the face of Wadsworth's defeat, the overwhelming affirmative majority for the prohibition referendum in this State will be without effect in Congress," he is quoted as having said.

By this significant verdict, Mr. Koenig insists, the Republican Party has divorced itself finally and effectually from the nullification faction which had attached itself to it and which had clung to it tenaciously. "From now on," he added, "the wets must depend on the Democratic Party for Volstead Law revision." And he significantly pointed out that the Democratic Party is wet only in spots. Outside of the large cities, he declared, the Democrats in most parts of the country are as dry as the Republicans in similar localities. This is the simple but important lesson in practical politics which Mr. Koenig declares has been taught:

No Republican Senator or member of the House of Representatives, placed in the same position as was Senator Wadsworth, in the long future will join hands with the wets, knowing in advance what his fate would be at the polls. It is apparent that as far as this wet city is concerned, the Democratic Party is in position always to command the full wet support, for the obvious reason that before ratification of the Eighteenth Amendment the Democratic Party locally always was on an exceedingly friendly footing with the liquor interests.

But even accepting this reassuring view of the situation, the time has not come when those who have borne the burden of the battle against the allied champions of a legalized rum traffic can flatter themselves that all has been won. There is that persistent and insinuating suggestion that personal liberty cannot be enjoyed or realized except by licensed indulgence. It must

not be forgotten that those first voters who will offer their ballots and exercise the right of suffrage in 1928, barely remembering that saloons once existed, are in a measure ignorant of the evils that attended unrestrained indulgence. Their memories hold no indelible picture of homes impoverished that the saloon might thrive. They have seen few cold and hungry children deprived of the simplest comforts that their fathers and mothers might enjoy the fullest possible measure of a vaunted personal liberty.

So there is the need, until the last engagement in the guerrilla warfare which the snipers and sharpshooters of the wet phalanx have forced upon the American people has been fought and won, that a realization of their deliverance and emancipation be impressed upon the newer generation of citizens and voters. The day is coming when decisions fixing and safeguarding important national policies will be left to them. We of today have no fear that at some time in the future it may be urged that the institution of human slavery should be restored by the voluntary action of the people of America. But that would be no more disastrous than would be the moral and spiritual reversal which must take place before the saloon can be restored.

It is an estimable plan being followed by the Associated Press, as described by Kent Cooper, general manager of that organization, at the twelfth annual convention of the Sigma Delta Chi, the professional journalism fraternity, in Madison, Wis. The Associated Press, he said, has embarked definitely upon a policy of promoting international understanding by including in its news service a large number of stories describing native life and interpreting native personalities in all corners of the globe to the millions of readers who each day see papers containing Associated Press service. And he added that no longer did world news deal entirely with economic and political events, his men being told to go out into the byways and get stories of the homely people behind the news stories of political and economic significance. Hence, "the streets, the farms, the people of other lands are pictured" in Associated Press news reports.

There is a growing demand among the people who read newspapers for constructive information. It may be granted that too much attention is paid in many instances to stories of an ill-savored type, but on the whole the indications are that this is less the case than it was a decade or so ago. People are realizing that the fruitage of such reading is anything but beneficial, that the gloatings over the details of unfortunate happenings or unpleasant incidents is debasing in its tendency. And almost without appreciating the change, a better point of view is creeping into the journalistic outlook. Having had its fill of such mental nourishment, the newspaper reading public is finding that it is not so much to its taste as it used to think was the case, and is looking elsewhere for something that is more constructive and more satisfying in its nature.

But this effort of the Associated Press to promote international understanding goes one step farther than the mere antidoting of the tendency toward debasing news. It involves indeed the definite upbuilding of a neighborliness among the peoples of the world the importance of which can hardly be overestimated. The records of humanity have largely grown out of misunderstanding. Their correction, therefore, will logically be helped by the gaining of that understanding which will show conditions in their true light. The field of journalism exercises an influence of tremendous force over the civilized nations of today. It cannot too soon accept its responsibility. That the Associated Press is doing so augurs well for an advance in the standards of newspapers everywhere.

Editorial Notes

Not the least remarkable feature of Henry Ford's decision to raise the pay of more than 90,000 of his employees to offset the reductions brought about by the five-day week is his statement that the spiritual benefits will probably outweigh other profits derived by the workers. This is how he put it in the Dearborn Independent:

"It (the five-day week) is just as sound from the spiritual standpoint. The church will be one of its chief beneficiaries. Leisure to be effective must be properly directed. The church will receive rewards from this new leisure commensurate with the force it exerts in directing the intelligent use of it.

Men have been giving an undue influence to play. They have stressed the physical to the neglect of the spiritual. In the squirrel cage round of work and recreation which they have devised they have left no place for the church. The physical aspect of Sunday has been gaining predominance over the spiritual.

Mr. Ford is further quoted as saying that the sixth day of the week should be spent in leisure, leaving the seventh for moral and religious observance. That sounds like pretty good sense.

If one judges from its personnel, the special staff which is to make a comprehensive general survey of the affairs of the American Indian should bring to its endeavors a sufficiency of knowledge to warrant any conclusions reached being authoritative. The Institute for Government Research, by the way, which is to make the survey, is a private organization at Washington, and the survey is being conducted at the request of Dr. Hubert Work, Secretary of the Interior, with the cordial approval of Charles H. Burke, Commissioner of Indian Affairs. Thus we find that a staff of specialists has been organized for the work, which is expected to take approximately a year, during which time the members of the party will visit practically all the larger and more important units in the Indian Service. That the survey—which is to embrace the educational, industrial, social and other activities maintained by the Indians, their personal and civil rights, and their general economic conditions—will find favor with the Indians is a perfectly natural hope.

Peace and the News of the World

A Bag of Weasels

THE night after the races there blew a black gale of wind, and icy rain fell with it. It lasted a day and a half, and then slackened. The next morning Martin O'Malley brought his cart across the strand at low tide and delivered a load of turf. He had one of the best strips of bog in the country, and he could cut and dry a sod that would blaze up on the hearth like a sunrise. When he had stacked the turf against the wall, up came Festy O'Malley.

"'Twas a terrible night," said Festy.
"A terrible night," said Martin.
"An' a wild sea crackin' on the nord," said Festy.
"On the nord," agreed Martin.
You could never get anything but an echo of yourself from Martin. You never knew quite where you were with him. He was indeed honest, reliable, laborious, and even punctual within an hour or so of a day or so. But he was unsoundable, ungettable. You could not even guess at what was in his thought.

He was huge of limb and drowsy of voice. His face was heavy and callous. His red, smooth skin had rare golden spikes of beard. A heathery branch of hair curled over his forehead and his eyes were the rounded, sealding blue of a tarn. He was as hot as a meadow. To seize his hand and to shake it was like holding a warm, red, resinous bough of pine.

His words were few and his voice rose saddy to abrupt silence in uttering them, like a heron rising from a mere and disappearing suddenly into the light—a voice of druidical melancholy. I wonder if anyone knew what Martin thought. He smiled at you, like a child showing the edge of his top teeth, with a pretty naïveté, smiled continually.

Festy and Martin walked toward the dunes and, sheltering under a kelp wall from the latter end of the wind, sat down for a chat.

"What's more," said Festy, "there was two cracks o' t'under this mornin'."

"T'under," agreed Martin.
"An' a shockin' darkness over the country abroad," went on Festy, looking up at a sky low with vapors aslant in it. "The darkness does be on account of the spring tide."

"The spring tide," said Martin.
"An' 'tis a sign the weather'd be breakin' up the way the squalls do be fallin' off the end of the wind," said Festy.

"Off the end of the wind," echoed Martin.
"It falls in lumps," said Festy.
"In lumps," agreed Martin.

"But the wind does be blowin' from the nord now, an' I'm thinkin' it won't make much rain at all. 'T will not."

"Troth, 't will not," said Martin.
"Was ye up in the mountain?" asked Festy, nodding to the turf.

"I was," said Martin.
"Did ye see, was the stranger within at Michael Byrnes? Of did she go to her own country yet?"

"To her own country, 'tis."
They sat in silence. The bay was ribbed with foam and the greenish tide ridden by the wind shuddered on the strand. The low sails of cloud flapped, and swinging round on their boom of wind obliterated the mountains. Only the cold, black coast was seen and its wet cottages. From the north the clouds rose endlessly over the horizon like a driven smoke. There seemed no end to the gale.

Miles away the gray sea could be watched breaking in cold fountains on the reefs. The wind sifted the dunes, emptied away the old lips and shaped new ones. The sand stung in the air and ate into the grass. There could be heard, under all the outside mutter, a grumbling undertone like far-away thunder, of the Atlantic on the reefs. "To her own country, 'tis?" said Festy, at last.
"To her own country, 'tis," said Martin.
"Tis big travelin' she's made," said Festy thoughtfully.
"Big travelin'," said Martin.
"I believe 'tis to a Cork man she's to be married," said Festy.

"To a Cork man, I believe."

A longish silence again. The tide was being whipped to the foot of the cliff and was sending up echoes like the clattering of wings. Kerrigan's donkey was walking on the brow of the hill and the black cattle stood there steaming. Kerrigan's boat was coming in fast at the flow, hugging the shore. The bay was full and hoarse with chidden water. Martin looked over the wall, and the wind, catching his cap, twisted the peak sideways. He was still smiling his warm magenta smile.

"Tis a strong wind. To a Cork man?" reflected Festy.
"A Cork man," said Martin.
"Herself thought 't was from Kerry he was," said Festy.
"From Kerry."

"But Tommy Linehan said 't was from the city of Cork itself he was, and himself in the German War. An' I suppose he'll be living in his own country by themselves both," said Festy.

"Sure, in his own country," said Martin.
"A fine, strong, healthy woman she does be,"
"Och, she is."

"An' I'll bet 'tis no lie I'm tellin' you that she'll keep him in order. She'll be the real goat's toe for him."

"She will," said Martin.
A squall sowed its traveling darkness and smudged out Erisberg with drifting indigo. There was still the undertone from the open sea crumpling upon the reefs. Kerrigan's donkey was honking from the cliff's edge. The cattle were moving down. Martin's pony shivered and the rain shone on the red wheels of the turf cart. Festy rubbed his chin and got up on his knees, seeing the dirty, oncoming equal.

"Ye know," he said, "women does be as contrary as a bag o' weasels."

"A bag o' weasels," said Martin through his fixed smile, for the longest plumb line never yet sounded him.

The World's Great Capitals: The Week in London

MARS' "visit" to the earth, speaking comparatively, was celebrated in London in a variety of ways. One of the incidents of the evening was the handing in of a message at the General Post Office, for transmission to Mars via the high-powered wireless station at Rugby. The message was presented by Dr. Mansfield Robinson, a student of astronomy, and was solemnly accepted, charged for and sent as directed. It consisted of three code words known only to the sender, was prefixed with three "M's" and was sent on a wavelength of 18,240 meters. The post office charged for the message at the long-distance ship rate, which is 1s. 6d. a word. "The Rugby station has a world-wide range," said a post office official, "but I do not know about the planetary system. If people wish to send out messages and are prepared to pay for them, there does not seem to be any valid reason why we should refuse revenue." It is estimated that the message, if actually received on Mars, 42,000,000 miles away, took about three and a half minutes for transmission from the earth. Radio experts had arranged a fourteen-valve super-heterodyne receiving set in London and waited until 4 a. m. for possible signals. Although the message sent out from Rugby to Mars was recorded, nothing of further interest occurred.

White Lodge, Richmond Park, near London, which was built by George II as a royal residence in 1728, and still contains a table on which tradition says Nelson drew his plans for the Battle of Trafalgar, is changing hands. The King's second son, the Duke of York, and his family have recently vacated it. An official announcement now says, "The King has granted a life lease of White Lodge to Lord and Lady Lee, who expect to take up their residence there in April next." Lord Lee distinguished himself during the war, when he was successively British Director-General of Food Production, Minister of Agriculture, and First Lord of the Admiralty. He is also known for his donation to the Nation in 1921 of that fine Tudor country house, "Chequers," near Princes Risborough, Buckinghamshire, which is now the permanent residence of British prime ministers. In 1899 he married Ruth, eldest daughter of J. G. Moore of New York.

Commotion in the House of Commons has been raging round Dr. Alfred Salter, Labor member for West Bermondsey, who has had the hardihood to tell the world at large that even members of the "mother of Parliaments" are not impeccable in the matter of sobriety. A resolution of censure for "Breach of Privilege" was moved against him in the House and passed, but he stood his ground and stoutly declined either to modify his statement or to apologize for it, though he agreed that the number of members to whom he referred is relatively small, also that the present Parliament compares favorably with its predecessors in this respect. Behind his charge, he said, was a desire to maintain the high prestige of the House of Commons. This was recognized by the fact that, although the vote of censure passed unopposed, no resolution followed suspending him from attending the debates. "The press, which loves sensational statements torn from their context," says the Nation and Athenaeum, "really began the trouble, and the House, with an uneasy conscience, made it ten times worse."

In the days when women wore their hair long and did it in a variety of ways, the Hairdressers' Annual Exhibition was quite a small affair. Now that some 80 per cent at least are bobbed, shingled or "bingled" (the cross between the bob and shingle), the hairdressers have taken the large Horticultural Hall and have utilized the whole of the floor space. One would have thought that when women took to doing their hair in a more or less universal fashion there would not be an added scope for an exhibition. But there are so many devices for curling, waving, and beautifying the short cropped head that there was plenty of room for variety. There was also a competition for women hairdressers, who had to cut, dress and wave the head of a living model in forty-five minutes. People have wondered whether this fashion will last. It certainly will if the hairdressers have anything to say in the matter. They are reaping a golden harvest.

Lord Haldane, retiring as president of the Magistrates' Association, observed that there are 1600 women magistrates in England, and remarked: "Don't let us imagine that this is the end of wisdom. It is a good beginning of wisdom." The quality of those appointed to the bench, he said, had thus been maintained. A magistrate, said

Lord Haldane, had to apply the standard of good citizenship in the courts where he adjudicated. He had to be a lawyer—that was to say, he had to acquire all the law he could. Certainly he had to be, above everything else, a firm-minded man, looking at the individual case in its concreteness, taking all the circumstances into account and saying what the good citizen ought to have done in the circumstances. That double function was not always an easy one, but it was one which excluded any notion of bringing class considerations into account. Class considerations were in these days apt to be brought in by workpeople just as they used to be brought in by the landed gentry. But class considerations, he said, were totally illegitimate in both cases. It was the judicial quality, in the humblest as in the highest, which was needed in the dispensation of justice. The idea of "children's courts" was approved by the association, and Lord Cave, the Lord Chancellor, was unanimously chosen as Lord Haldane's successor.

Sayings of the week:
Comment is free, but facts are sacred.—C. P. Scott.
I believe there is only one limit to the possibility of invention, and that is simply the limit of human imagination.—Guglielmo Marconi.

In a world still suffering severely from the shock of the war, still rent by barely concealed rifts, dissensions and bitterness, the British Empire stands as one of the great stabilizing elements.—Prime Minister Baldwin.

He is a friend neither of the miners nor of Labor generally whose only contribution to the troubles that beset us is cheering men to go blindly on.—Ramsay MacDonald.

In economic matters we are still in the stone age; to settle these problems in an atmosphere like the present is like trying to play billiards in a storm at sea.—Sir Josiah Stamp.

Business is a service, and success in business depends on the ability to serve.—Sir Ernest Benn.

A man was asked, "What do you do with your old clothes?" "I fold them carefully up at night and place them on a chair. Then I put them on in the morning," he replied.—Lord Dewar.

Less Liquor Drinking in New York City

To the Editor of THE CHRISTIAN SCIENCE MONITOR:
The MONITOR is to be commended for its firm stand on the prohibition question. And I should like to tell you of my personal observation on this issue.

It was my privilege to watch at the polls in 1915 and 1917 during the woman suffrage vote. In spite of the law requiring saloons to be closed during voting hours, the saloon next to the polling place was open, with the result that quite a large number of the voters were intoxicated when they came in to vote. The last three years I have been a member of an election board in a worse neighborhood than the former. The first year a few voters showed signs of intoxication. This was last year, and this year not one man out of 234 showed any sign of having been drinking.

Another self-evident fact is that, whereas formerly four corners of the street were occupied by saloons during a thriving business, now a dingy, dirty store in the middle of an occasional block will exist a few months and then close up for want of patronage. Sometimes such a place will open under the guise of a cigar store or an eating house, but it doesn't last long because of the extra expenses involved.

All these conditions to a close observer mean but one thing. There is less drinking of intoxicating liquor, in spite of the ease with which it can be procured.

Night clubs, too, are not supported by native New Yorkers to any great extent. I have ample opportunity to observe these conditions because I am located on Seventh Avenue, near One Hundred and Twenty-fifth Street. During the last year and a half I have not seen six drunken men, though I am told that before prohibition drunkenness was almost always in evidence. The corner resort where men and women then congregated is now occupied by an automobile saleroom.

These are only a few of the signs of the times. I know that decent, law-abiding citizens do predominate, even in New York City.
H. L. M.
New York, N. Y.

Taxing Intangible Property
